Dr. Ramaa A
Associate Dean - P&T,
Associate Professor,
IDEA Secretary, Dept. of IEM, RVCE

Greetings from the Department of Industrial Engineering and Management!

This newsletter brings you the latest updates and highlights from our department, featuring key events, research accomplishments, student achievements, and faculty contributions that reflect the dynamic academic and professional environment of IEM.

In addition to academic milestones, this issue also showcases the vibrant extracurricular engagement of our students through hackathons, technical fests, cultural programs, and initiatives led by student clubs. These activities provide valuable opportunities for students to collaborate, innovate, and develop leadership skills beyond the classroom.

We hope this newsletter keeps you informed, connected, and proud to be a part of the IEM community.

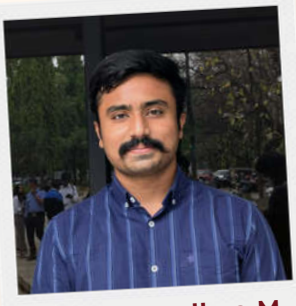

Warmly,
The Editorial Team

Data-Driven Decision Making: The New DNA of Industrial Engineering

Industrial Engineering and Management (IEM)has always focused on designing efficient systems, improving productivity, and supporting managerial decisions. What distinguishes the current era from the past is not the intent of industrial engineering, but the means through which decisions are made. In an age defined by digitalisation, automation, and analytics, data driven decision making has emerged as the defining characteristic and the new DNA of Industrial Engineering.

Earlier, many operational & managerial decisions were guided by experience, heuristics, and limited historical data. While intuition & experience remain valuable, today's industrial environment generates vast amounts of data through enterprise systems, sensors, digital supply chains, customer platforms & smart machines. The challenge has shifted from data scarcity to data sense making. Industrial engineers are now expected to convert data into insights & insights into decisions that improve system performance.

Consider a manufacturing shop floor where production delays occur frequently. A traditional approach might attribute delays to labor shortages or machine breakdowns based on observation. A data driven approach, however, analyses machine utilisation data, downtime logs, cycle time variations & queue lengths to identify the true bottleneck. Often, the insight reveals non obvious causes such as imbalance between workstations or inefficient scheduling, leading to targeted & sustainable improvements. This ability to diagnose problems objectively makes data driven thinking indispensable.

The relevance of data driven decision making extends far beyond manufacturing. In supply chain management, demand forecasting models built using historical sales data, seasonality, and external factors help organizations reduce inventory costs while improving service levels. During recent global disruptions, companies that relied on real time data and scenario analysis were better equipped to redesign their supply networks and respond proactively. Industrial engineers play a key role in these decisions by integrating analytics with operational understanding.

Similarly, in quality management, decisions are no longer reactive. Statistical process control charts, data based root cause analysis, and predictive quality models allow engineers to prevent defects rather than merely detect them. For instance, analyzing process parameter data can signal quality deterioration well before defects reach the customer. Such applications demonstrate how data driven approaches enhance both efficiency and reliability.

While advanced tools such as Excel analytics, Power BI, Python, simulation software & AI platforms are widely used today, it is important to emphasise that tools alone do not define data driven decision making. Data must be contextualised within operational constraints, economic trade offs & human factors. A technically correct model that ignores practical feasibility rarely leads to sound decisions. For students of IEM, this implies that learning analytics is not just about mastering software, but about developing the ability to ask the right questions of data. Understanding assumptions, validating results & communicating insights clearly are equally important skills. For faculty, it calls for a pedagogical shift from solving well structured textbook problems to engaging students with open ended, data backed scenarios that reflect real industry complexity.

Engineering education must actively integrate data driven decision making across core IEM subjects such as operations research, supply chain management, project management & quality engineering. Case based learning, industry led caselets, simulations & live datasets help students experience how decisions are made under uncertainty & constraints. These learning formats strengthen critical thinking, collaboration & managerial judgment which are competencies for industry increasingly values. The impact of this approach is clearly visible in student engagement and employability. Graduates who can support decisions with data, justify recommendations analytically, and communicate outcomes effectively stand out in interviews and professional environments. Employers increasingly seek industrial engineers who can bridge the gap between data scientists and managers by translating analytical outputs into actionable business decisions.

Looking ahead, as Industry 4.0, digital supply chains, and AI enabled systems continue to evolve, data driven decision making will become even more central to the IEM profession. Rather than replacing industrial engineers, data and analytics amplify their role by enabling them to design smarter, more resilient, and more sustainable systems.

In conclusion, data driven decision making is not an add on skill for industrial engineers. It is foundational. It shapes how problems are understood, how solutions are evaluated, and how decisions are justified. For the IEM community, embracing this paradigm is essential to staying relevant in a rapidly changing world. In every sense, data driven decision making has become the new DNA of Industrial Engineering.

Associate Dean - P&T,
Associate Professor,
IDEA Secretary, Dept. of IEM, RVCE

Alumni Speaks

Timeless Lessons from RVCE

Entering the portals of RVCE in 1990 as a student of Industrial and Production Engineering course felt like a dream. The commitment to excellent, value of discipline and a drive towards creating your own path were evident as institutional values.These were not just confined to the posters on walls but extended to everyone from the admission staff to the Principal of the college. Something which everyone believed in and acted upon. The Principal, Prof. Holla was a feared person in the beginning years at the collage. But soon two elements of respect and love got added. My journey from RVCE into academic and later professional life has given me many opportunities to work with some outstanding leaders. However, I will count Prof Holla as amongst the best I have ever met.

RVCE was not just about Prof. Holla, but his influence on the functioning and thinking of every person – HOD's, Faculty, Staff and the students at the college. What I learnt from RVCE and specifically the Industrial and Production Engineering Department (IPE) have served me very well over the years.

I. Set your own standards and select the right benchmarks

Too often we fall a prey to the environment around us.Mediocre surroundings result in mediocre outcomes. But only if you let them calibrate your goals and the path to reach them. At RVCE, it was evident from the beginning that the college was benchmarking with best colleges in the country. This meant not accepting a refrain from any quarter that "everyone is like this". Be it research, industry connects, academic rigour and discipline, the college set it's own standards. This is a challenge to start and even more difficult for any organization. But the college did this successfully and 31 years later, I see RVCE, still doing the same. In the IPE department as well, elective subjects offered at the undergraduate levels, were the ones which were offered rarely and that too at the PG level in the IIT's. These subjects required the best-in-class faculty, very strong foundation in the 2nd & 3rd Years of the course, and even textbooks which were rare to find. But none of these challenges deterred the department from offering these courses successful. Some of these topics kept me in very stead when I joined Caterpillar as an Industrial Engineer in 1994.

II. Discipline with Love

My father is an Indian Airforce (IAF) officer. As a defence kid, I always saw how in the IAF, there would be a very strong mix of both discipline and love for colleagues. The discipline would maintain the rigour and a strong work ethic but the love from colleagues, especially seniors would foster that love for your workplace. I witnessed both these aspects at RVCE in equal measure. The College leadership would ensure timely and effective adherence to the academic cadence; they would also ensure that the students were nurtured to ensure live up to the highest standards.

III. While we fly high, stick to the basics

In the IPE department, the focus on understanding of the basic subjects was very high.Fundamentals would be emphasized and kept in sight all the time. The faculty always went the extra mile to ensure that the basics were taught well and with all the detail. Lecturers would say that you cannot build a tall building on a weak foundation. The rigour of conducting a strong internal assessment was carried out very well.When I joined Caterpillar as an Industrial Engineer, all of 21 years of age, I was assigned the seemingly uphill task of setting up an Industrial Engineering department from scratch. Even then, I consulted my teachers several times on how we should go about doing this.In 18 months, the company established a fresh set of operating procedures to ensure a tripling of the output there.

IV. The best friendships

I had the opportunity and privilege of studying with the some of the best students in my class.Learning from them on many subjects that I wasn't especially strong in, the fun in the college canteen and lawns, not to mention the college bus are some of the enduring memories. We continue to friends and recollect our time together at the College.

I am glad that the College continues it's path to excellence. I had the opportunity to meet with the current Principal Prof. Subramanya, and I see the same dedication to excellence that I saw 32 years back.It is getting only better. When I see RVCE, I will say "Those ARE the days" instead of "Those WERE the days".

Sri M. P. Sundar sponsors the Sri M. Prahalada Rao Award, instituted in memory of his father Sri M. Prahalada Rao, to recognize and honor students demonstrating the best performance in the area of Industrial Engineering courses every year at RVCE.

Mr. Sunder Madaakshira

1990 - 1994
Chief Marketing Officer - Sinch India,
Advisory member National Digital Innovation Council of India, GoI.

WORKSHOPS, CONFERENCES & EVENTS

The department was actively involved in the 9th IEEE International Conference on Computational Systems and Information Technology for Sustainable Solutions (CSITSS-2025), held at RV College of Engineering from 20–22 November 2025. The conference brought together faculty, students and industry professionals, providing a platform for discussions on sustainable computing, intelligent systems and technological innovation.

Faculty members also contributed significantly to the 3rd International Conference on Emerging Applications of Material Science and Technology (ICEAMST-2025), conducted at RVCE from 3–5 November 2025, focusing on advancements in electronic materials and sustainable technologies.

Committees & Leadership at ICEAMST 2025:

- Local Arrangement Chair: Dr. Rajeswara Rao K V S.
- Web Chair: Dr. C K Nagendra Guptha.
- Conference Coordinator: Dr. Vikram N Bahadurdesai.
- Souvenir Committee: Prof. Nandini B.
- Technical Support: Mr. Govindarajulu N, Mrs. Vidya V.
- Session Chairs: Dr. C K Nagendra Guptha and Dr. Rajeswara Rao KVS

Faculty members served as organizers and contributors to the 23rd Asian Network for Quality (ANQ)conference, held at MS Ramaiah University of Applied Sciences from 3–7 November 2025, strengthening international collaboration in quality management and operational excellence.

WORKSHOPS, CONFERENCES & EVENTS

The department hosted a comprehensive series of events focused on the Legal Framework of IPR for aspiring entrepreneurs and innovators:

- IPR Basics for Innovators and Entrepreneurship: Delivered by Dr. N S Narahari on 13th November 2025 to 50 students and 2 faculty members.
- Legal Framework of IPR (Online): An insightful online session led by Dr. M. K. Matolli (Associate Professor/Principal, Govt Law College, Hassan) on 21st November 2025, attended by 50 students and 2 faculty members.
- Essentials for Aspiring Entrepreneurs and Innovators: An interactive talk by Mrs. Rashmi R (Assistant Professor & CEO Legal Studies, KLE Law College) on 28th November 2025, attended by 60 students and 2 faculty members.

Dr. N S Narahari

Mrs. Rashmi R

Dr. M. K. Matolli

WORKSHOPS, CONFERENCES & EVENTS

Faculty members delivered invited technical sessions under the National Productivity Council (NPC), Bangalore, as part of the MCLS Scheme of the Government of India, addressing core industrial engineering practices.

- Dr. K N Subramanya delivered a session on "Going Forward with Lean" on 4 November 2025
- Dr. Rajeswara Rao KVS delivered a session on "The Perfect Partnership: How Statistical Process Control Fuels Lean Success" on 4 November 2025.
- Dr. C. K. Nagendra Guptha delivered a session on Inventory Management for MSMEs on 6 November 2025.
- Dr. Ramaa A delivered a session on Just-In-Time (JIT) and Kanban on 6 November 2025.
- Dr. N S Narahari delivered a session on "Toyota Production Systems - Jidoka, Pokayoke and Andon Systems" on 5 November 2025.

All sessions were conducted at the IEM Seminar Hall, RVCE, with participation from faculty members and industry professionals.

IDEA organized an interactive event titled "Pitch, Vote, Build", an entrepreneurship-themed activity where participants pitched creative solutions to randomly assigned everyday challenges on 25th November 2025 for 2nd and 3rd Year IEM Students. The best ideas were voted on, after which teams were formed to develop a problem statement, solution, tagline, and a quick prototype concept. The event concluded with team presentations and audience voting for categories such as Most Creative, Most Realistic, and Most Ridiculous (in a good way).

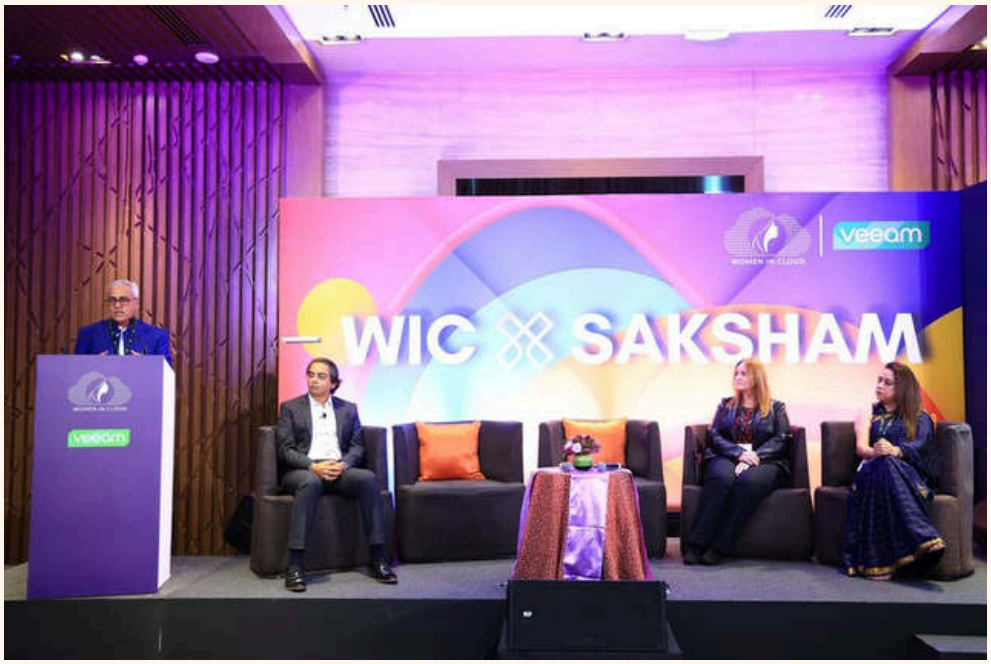

The Department of Industrial Engineering & Management, RV College of Engineering, through IDEA, successfully conducted BeeHive 2.0 – a Case-let Competition, creating an engaging platform for students to apply classroom concepts to real-world industry scenarios.

The highlight of the event was the expert session and case facilitation by Dr. M. A. Narasimha Murthy, Senior Director, Infineon Technologies, whose insights helped students approach problems with an industry mindset. The case-let discussions significantly enhanced critical thinking, analytical reasoning, and decision-making skills among participants.

Students actively engaged with practical challenges, explored multiple solution pathways, and gained valuable exposure to how industry leaders analyze and solve complex problems.

Dr. K N Subramanya participated in Executive Round Table event the BharatCyberSuraksha – Saksham & Sakshar Bharat campaign, organised by Women in Cloud (WIC),

The department Faculty and Students participated in institutional and cultural initiatives, with Dr. Vikram N. Bahadurdesai serving as Faculty Coordinator for Kannada Rajyotsava celebrations conducted on the 1 November 2025 under the Kannada Sangha, RVCE.

AWARDS

Dr. K.N. Subramanya, received The News Papers Association of Karnataka conferred Karnataka Rajyostava Award 27th Nov.2025

Memoranda of Understanding (MoU)

RV College of Engineering (RVCE) has signed a Memorandum of Understanding with MSGP Infra Tech Pvt. Ltd., Bengaluru on 24th November 2025, to collaborate on training and capacity building in Sustainable Waste Management and circular Economy. The following departments are part of MoU - IEM, CSE, ECE, ET. The partnership aims to design and deliver structured training programs, workshops, industrial visits, and awareness initiatives for students, faculty, and professionals.

Through this collaboration, RVCE and MSGP will jointly develop curriculum, training modules, and innovative learning content, including digital and immersive learning experiences. The initiative will also promote research, hackathons, internships, and industry engagement focused on climate-tech, circular economy, and waste innovation. The program seeks to strengthen practical learning, industry exposure, and sustainability-driven innovation among participants.
