Volume 4 of 5 • Unofficial student study text • 2026 edition

**Marketing Management — The Study Text**
Volume 4 of 5 • Unit IV: Web Design and Mobile Marketing

Prepared for the course Marketing Management (IM345AT), Semester IV, of the Department of Industrial Engineering and Management, RV College of Engineering, Bengaluru – 59.

**Sources.** The syllabus, course outcomes, assessment rubrics and reference-book list reproduced in the front matter are transcribed from the official course document. The previous-year questions in Appendix B are transcribed from RVCE Continuous Internal Evaluation and Semester End Examination papers for this course, and where an official scheme of valuation was released the model answers follow it. The explanatory text is compiled from classroom lecture notes and, where those were incomplete, from the prescribed reference texts.

**Typography.** Set in Nimbus Roman with URW Gothic display headings. Composed in LaTeX using the `MMTextbook` class written for this series. The visual design is derived from *The Legrand Orange Book* template by Mathias Legrand, with modifications by Vel, distributed through LaTeXTemplates.com under a Creative Commons BY-NC-SA 4.0 licence; the class re-implements that design language on standard CTAN packages. All figures are drawn in Ti*k*Z and `pgfplots`.

**Status.** Unofficial student-compiled study material. Not issued, endorsed or verified by the Department or by RV College of Engineering.

2026 edition.

# Preface to Volume 4

Unit IV covers the two places where every other channel finally lands. Volume 1 established that a digital campaign is a hub with spokes, and that the hub is a quality company website. This unit is about building that hub properly — and about the device on which most visitors will actually reach it.

The first half is web design, and its governing idea is that design is not decoration. The website is the conversion destination that every spoke feeds, so a design decision is a revenue decision. The material accordingly runs from principles to process: what web design is, what optimising a site means, how a site is actually published, how to let the user rather than the design team drive the decisions, how design and copy work as one system, and how to turn website metrics into decisions rather than dashboards.

The second half is mobile marketing, and it opens with a distinction the examiners return to more often than any other in this unit: mobile *advertising* is a paid subset of mobile *marketing*. Getting that one line right, and being able to expand it into a table, is worth more marks in Unit IV than any other single fact.

Chapters 1 to 5 cover web design; Chapters 6 to 8 cover mobile marketing. The chapter sequence follows the syllabus phrase order exactly, and Appendix A records the mapping.

Two notes on the shape of this volume.

First, some material here deliberately repeats Volume 1. Krug's first law, the seven usability attributes and the landing-page essentials appear in Unit I under "Optimize Website UX & Landing Pages" and again in Unit IV under "Design Principles". Both unit descriptors name them, so both volumes carry them; the treatment here is the design-side treatment rather than the content-marketing side.

Second, like Volume 3 this volume needs no appendix of off-syllabus material. Every topic in the source notes maps to a phrase in the unit descriptor.

*The whole of the course syllabus is reproduced overleaf. The unit covered by this volume is Unit IV.*

# How to Use This Study Text

## The shape of a volume

Each of the five volumes in this series covers exactly one unit of the IM345AT syllabus and is self-contained. Every volume opens with the official syllabus for the whole course, so that the unit in hand can always be located within it, and closes with a set of appendices carrying the concordance, the question bank, the glossary and a quick-reference sheet.

The numbered chapters of each volume map one-to-one onto the topic phrases of that unit's official syllabus descriptor. The order of the chapters is the order of the syllabus. Appendix A sets out that mapping explicitly, phrase by phrase, so coverage can be audited rather than assumed.

## The five panel types

Material that is not continuous prose is set in one of five panels. Each has a fixed meaning throughout the series.

**DEFINITION** • the term being defined

A formal definition, worth reproducing close to verbatim in an answer script. The term appears in the panel heading and again in the index.

**HIGH YIELD**

A result, list or distinction that carries disproportionate examination weight. Where a topic has recurred across papers, the recurrence is recorded as a bracketed tag. (CIE-I, 3 Apr 2025; CIE-I, 16 Apr 2026)

**MODEL ANSWER**

An answer written at the length and in the register the marking scheme rewards. Where an official scheme of valuation was released, the panel follows it.

**WORKED EXAMPLE**

A concrete illustration — a named company, a named persona, a worked calculation — rather than a general statement.

**CAUTION**

A common and costly error: a distinction usually collapsed, a term usually misused, or an answer that looks complete and is not.

A sixth panel, in green, sets out a framework or process as a single sequence:

**FRAMEWORK**

Step one → step two → step three → back to step one.

## How previous-year questions are recorded

**THE BRACKET CONVENTION**

A past-paper appearance is recorded **only** as a bracketed source tag attached to the material, never as a sentence of narrative. So the text reads

> Push versus pull marketing. (CIE-I, 3 Apr 2025; CIE-I, 16 Apr 2026; SEE, Jun/Jul 2025 — 2 M)

and never "this was asked in 2025 and again in 2026". The tag carries the paper, the date and, where the mark allocation is known, the marks. Multiple appearances are separated by semicolons.

The abbreviations used inside tags are:

| | |
|---|---|
| **CIE-I** | First Continuous Internal Evaluation test |
| **CIE-II** | Second Continuous Internal Evaluation test |
| **CIE-III** | Third Continuous Internal Evaluation test |
| **SEE** | Semester End Examination |
| **2 M** | Mark allocation of the question as printed on the paper |

Appendix B of each volume reproduces every past-paper question traced to that unit, in full, grouped by mark weight, each carrying the same bracketed tag.

## Cross-references, figures and the index

Cross-references are given as § chapter.section — so § 1.4 is the fourth section of Chapter 1. Every figure in this series is drawn in TEX rather than imported as an image, so the diagrams print at full resolution at any size and use the same typeface as the surrounding text. Figures and tables are listed after the table of contents.

Terms set in ***bold italic*** on first use are indexed. The index at the back of each volume is a real back-of-book index built from those terms, not a repeat of the contents list.

## Status of this text

**UNOFFICIAL DOCUMENT**

This is a student-compiled study text. It is not issued, endorsed or verified by the Department of Industrial Engineering and Management or by RV College of Engineering. The syllabus reproduced in the front matter, the assessment rubrics and the previous-year questions are transcribed from official documents; the explanatory prose around them is not official. Where the source lecture notes were incomplete, gaps have been filled from the prescribed reference texts listed in the front matter. Always cross-check against the official syllabus and your own class notes.

# Official Syllabus: IM345AT

Reproduced from the official course document issued by the Department of Industrial Engineering and Management, RV College of Engineering. The text of the five unit descriptors below is the authority against which every chapter of this series is written; nothing outside it appears in the numbered chapters of any volume.

**Semester: IV • MARKETING MANAGEMENT**

Category: Professional Core Course (Theory)

| | | | |
|---|---|---|---|
| **Course Code** | IM345AT | **CIE Marks** | 100 Marks |
| **Credits (L:T:P)** | 3:0:0 | **SEE Marks** | 100 Marks |
| **Total Hours** | 45 L | **SEE Duration** | 3.00 Hours |

## UNIT–I 07 Hrs

**Introduction to Digital Marketing:** Principles of Digital Marketing; Digital Marketing Channels; Tools to Create Buyer Persona; Competitor Research Tools, Website Analysis Tools, etc.

**Content Marketing:** Content Marketing Concepts & Strategies; Planning, Creating, Distributing & Promoting Content; Optimize Website UX & Landing Pages; Measure Impact; Metrics & Performance; Using Content Research for Opportunities, etc.

## UNIT–II 08 Hrs

**Social Media Marketing:** Introduction; Major Social Media Platforms for Marketing; Developing Data-driven Audience & Campaign Insights; Social Media for Business; Creation & Optimization of Social Media Campaigns, etc.

**Search Engine Optimization:** Search Engine Optimization Fundamentals; Keywords and SEO Content Plan; SEO & Business Objectives; Writing SEO Content; On-site & off-site SEO; Optimize Organic Search Ranking, etc.

## UNIT–III 07 Hrs

**Web Analytics & Google Analytics:** Google Analytics Tools; Web Analytics Tools, etc.

**E-mail Marketing:** Effective E-mail Campaigns; E-mail Plan; E-mail Marketing Campaign Analysis; Measuring Conversions & keeping up, etc.

## UNIT–IV 07 Hrs

**Web Design:** Web design, optimization of websites; Publishing a basic website; User-centered Design and Website Optimization; Design Principles and Website Copy; Website Metrics & Developing Insight, etc.

**Mobile Marketing:** Difference between mobile advertising and marketing, utilizing mobile marketing for sales promotions, online applications, etc.

**UNIT–V 07 Hrs**

**Conversion Optimization:** What is AIDAS and its role; website optimization; what visitors want to see on the website; how to optimize key element and increase the effect of landing on a particular page

**Digital Analytics:** Evolution of Digital Analytics, information about end-to-end customer experience, analyst's influence on business, role as a change agent, etc.

## Course Outcomes

After completing the course, the students will be able to:

| | |
|---|---|
| **CO1** | Differentiate the benefits drawn by updated marketing mix from traditional marketing mix for effective marketing management there by to stay competitive in today's global market-place. |
| **CO2** | Develop an effective holistic marketing atmosphere to efficiently face the challenges in dynamically changing market. |
| **CO3** | Formulate a potential marketing plan to effectively reach the targeted market segments, by delivering the value to targeted customers through practicing sound marketing research. |
| **CO4** | Create new channels to improvise marketing to achieve and maintain competitive position in globalized market-place. |

## Prescribed Reference Books

# Assessment Scheme

## Rubric for the Continuous Internal Evaluation (Theory)

| # | Component | Marks |
|---|---|---|
| 1. | **Quizzes:** Quizzes will be conducted in online/offline mode. TWO QUIZZES will be conducted & each quiz will be evaluated for 10 marks. The sum of two quizzes will be the final quiz marks. | **20** |
| 2. | **Tests:** Students will be evaluated in test, descriptive questions with different complexity levels (Revised Bloom's Taxonomy Levels: Remembering, Understanding, Applying, Analyzing, Evaluating and Creating). TWO tests will be conducted. Each test will be evaluated for 50 marks, adding up to 100 marks. Final test marks will be reduced to 40 marks. | **40** |
| 3. | **Experiential Learning:** Students will be evaluated for their creativity and practical implementation of the problem. Case study-based teaching learning (10), Program specific requirements (10), Video based seminar/presentation/demonstration (20), adding up to 40. | **40** |
| **MAXIMUM MARKS FOR THE CIE THEORY** | | **100** |

## Rubric for the Semester End Examination (Theory)

| Q. No. | Contents | Marks |
|---|---|---|
| **PART A** | | |
| **1** | Objective type questions covering entire syllabus | **20** |
| **PART B** | *(Maximum of TWO sub-divisions only)* | |
| **2** | Unit 1: (Compulsory) | **16** |
| **3 & 4** | Unit 2: (Internal Choice) | **16** |
| **5 & 6** | Unit 3: (Internal Choice) | **16** |
| **7 & 8** | Unit 4: (Internal Choice) | **16** |
| **9 & 10** | Unit 5: (Internal Choice) | **16** |
| **TOTAL** | | **100** |

**WHAT THE SEE STRUCTURE MEANS FOR THIS VOLUME**

Part A draws twenty marks of objective questions from the *entire* syllabus, so no unit can be skipped. In Part B, Question 2 is compulsory and is always set from Unit I; Units II to V each carry a 16-mark internal-choice pair. A candidate therefore answers Unit I plus one question from each of the remaining four units — five full questions in all.

CHAPTER 1

# Web Design and the Optimization of Websites

***SYLLABUS EXTRACT***

*Web Design: Web design, optimization of websites.*

**WHAT THIS CHAPTER COVERS**

- What web design is, and why it is a revenue decision.
- User interface and user experience — scope, deliverables, marketing role and failure symptoms.
- The basic pages a business website needs.
- What website optimization is, why it matters, and its four types.
- The eight optimisation techniques, with their concrete sub-actions.
- Image optimization, and its four distinct contributions.
- Testing and optimisation — methods, what each finds, and the tools.

## 1.1 What Web Design Is

**DEFINITION** • Web Design

***Web design*** involves creating visually appealing and user-friendly websites. It includes layout design, colour selection, typography, graphics, navigation and responsiveness. (CIE-III, Jun 2026 — 10 M)

**WHY A DESIGN DECISION IS A REVENUE DECISION**

Web design is not decoration. In marketing terms the website is the **hub of the entire digital campaign ecosystem** — the round-the-clock portal and the ultimate conversion destination that every other channel feeds. Every visitor that SEO, paid search, social, e-mail and affiliates deliver arrives here. A design flaw therefore taxes every channel simultaneously.

## 1.2 User Interface and User Experience

**HIGH YIELD**

"What is the role of user Interface and user Experience designs in web design for marketing? How can businesses ensure a positive user Journey on their websites?" (SEE, Oct/Nov 2023, Q7a — 8 M)

**Table 1.1.** User interface against user experience

| | User Interface (UI) | User Experience (UX) |
|---|---|---|
| **Definition** | The visual and interactive surface the user touches — layout, colours, typography, buttons, icons, spacing, states | The entire quality of the user's journey — how easy, efficient and satisfying it is to achieve their goal |
| **Scope** | What it looks like and how it responds | How it feels and whether it works |
| **Deliverables** | Style guides, design systems, mockups, component libraries | Personas, user journeys, wireframes, information architecture, usability test findings |
| **Marketing role** | Creates the first impression and signals brand credibility within milliseconds | Determines whether the visitor converts, returns and recommends |
| **Failure symptom** | The site looks dated or inconsistent; the brand appears untrustworthy | Users cannot find what they need; high bounce, low conversion |

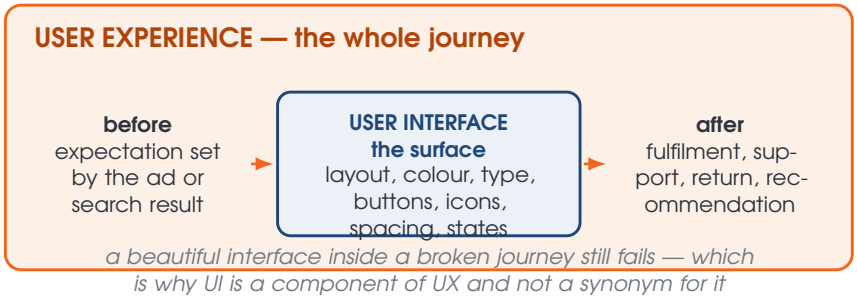

**Figure 1.1.** UI is one component of UX, not a synonym for it. The interface can be faultless while the journey — expectation, fulfilment, support — still loses the customer.

> **ENSURING A POSITIVE USER JOURNEY — EIGHT ACTIONS**
>
> Map the journey before designing; keep navigation shallow and conventional; make the primary action obvious on every page; minimise the number of steps to the goal; provide feedback for every action; design the error and empty states, not just the happy path; make the site fast and responsive; and test with real users rather than with colleagues.

## 1.3 Website Structure — The Basic Pages

- **Home page** — states what the business does, for whom, and what to do next, within five seconds.
- **About page** — credibility, team, history, credentials.
- **Product and service pages** — one page per offering, benefit-led, with proof and a call to action.
- **Landing pages** — single-purpose campaign destinations with navigation removed.
- **Blog and resources** — the SEO and content-marketing engine.
- **Contact page** — multiple contact routes, a map, hours, and a response-time expectation.
- **Trust pages** — testimonials, case studies, certifications, privacy policy, terms, refund policy.

## 1.4 Website Optimization — Definition and Importance

**DEFINITION** • Website Optimization

***Website optimization*** is the process of improving website performance, speed, usability and search visibility in order to increase traffic and conversions. (CIE-III, Jun 2026 — 2 M)

**IMPORTANCE — OFFICIAL SCHEME, 10 MARKS**

(CIE-III, Jun 2026 — 10 M)

- Improves website loading speed.
- Enhances user experience.
- Increases search engine ranking.
- Reduces bounce rate.
- Improves conversion rate.
- Supports mobile compatibility.

**Types of website optimization:** technical optimization; content optimization; SEO optimization; mobile optimization.

**Benefits:** better customer engagement; increased sales and traffic; improved brand image.

## 1.5 The Optimization Techniques

**THE RECURRING SCENARIO**

"A start-up company notices that visitors leave their website within a few seconds. As a web designer, explain how you would optimize the website to improve user engagement and conversion rate." (CIE-III, Jun 2026 — 10 M)

1. **Improve website loading speed** — compress images, minimise unnecessary scripts, use fast hosting, enable caching and a content delivery network, and minify CSS and JavaScript.
2. **Create a responsive design** — ensure compatibility with mobile, tablet and desktop; design mobile-first.
3. **Improve navigation** — use simple menus and a proper page structure; keep important pages within two or three clicks.
4. **Enhance content quality** — attractive headings, meaningful visuals and clear information; remove needless words.
5. **Add strong call-to-action buttons** — "Buy Now", "Register", "Contact Us" — prominent, above the fold, and repeated.
6. **Improve SEO** — proper keywords, unique title tags and meta descriptions, heading hierarchy, image ALT text.
7. **Reduce bounce rate** — provide engaging, relevant content that matches the promise made by the referring advertisement or search result.
8. **Monitor website metrics** — analyse visitor behaviour using analytics tools, and keep iterating.

**HOW TO TURN THIS INTO A FIRST-CLASS ANSWER**

Open with a **diagnosis step** — heatmaps and session recordings to establish *why* visitors leave — and close with **A/B testing** to validate each fix. A list of eight techniques without a diagnosis at the front and a validation at the back is a checklist; with them, it is a method.

Additional techniques for a fuller answer: A/B test headlines, calls to action and layouts; simplify forms by removing non-essential fields; add trust signals near the point of decision; implement exit-intent offers; use heatmaps and session recordings to locate friction; and fix accessibility so the site works for every visitor.

## 1.6 Image Optimization

**MODEL ANSWER — 2 MARKS**

"How does image optimization contribute to overall website performance?" (Improvement CIE, 28 Aug 2024 — 2 M)

- **Speed.** Reduces page weight and load time, which directly lowers bounce rate and improves Core Web Vitals.
- **Mobile.** Improves the experience on slower connections and limited data plans.
- **SEO.** Descriptive file names and ALT text make images discoverable in image search and help the page rank.
- **Accessibility.** ALT text is read by screen readers and displayed when images fail to load.

**Techniques:** compress files; use modern formats such as WebP and AVIF; size images to their display dimensions; serve responsive images with `srcset`; lazy-load below-the-fold images; and use a content delivery network.

## 1.7 Testing and Optimization

**HIGH YIELD**

"Describe the importance of testing and optimization in web design for Marketing. What tools and methods can be used?" (SEE, Oct/Nov 2023, Q7b — 8 M)

**WHY TESTING MATTERS**

Design opinions are unreliable predictors of user behaviour. Testing replaces assumption with evidence, de-risks redesigns, produces compounding conversion gains on all future traffic, and reveals device- and segment-specific failures that are invisible in aggregate data.

Table 1.2. Testing methods, what they find, and the tools

| Method | What it finds | Tools |
|---|---|---|
| **A/B and multivariate testing** | Which version performs better on a defined goal | VWO, Optimizely, AB Tasty |
| **Usability testing** | Where real users get stuck, and why | UserTesting, Maze, moderated sessions |

| Method | What it finds | Tools |
|---|---|---|
| **Heatmaps, scroll and click maps** | What attracts attention and what is ignored | Hotjar, Microsoft Clarity, Crazy Egg |
| **Session recordings** | Hesitation, rage clicks, dead clicks, form abandonment | Hotjar, Clarity, FullStory |
| **Analytics funnel analysis** | The exact step at which users drop out | Google Analytics 4 |
| **Performance testing** | Speed and Core Web Vitals | PageSpeed Insights, Lighthouse, GTmetrix, WebPageTest |
| **Cross-browser and device testing** | Rendering failures on specific clients | BrowserStack, LambdaTest |
| **Accessibility auditing** | Barriers for users with disabilities | WAVE, axe, Lighthouse |
| **Technical SEO crawling** | Broken links, duplicate meta, redirect chains | Screaming Frog, SEMrush Site Audit |

## CHAPTER SUMMARY

Web design creates visually appealing, user-friendly sites through layout, colour, typography, graphics, navigation and responsiveness — and because the site is the hub every channel feeds, a design decision is a revenue decision. UI is the surface; UX is the whole journey, and UI is a component of UX rather than a synonym. A business site needs home, about, product, landing, blog, contact and trust pages. Website optimization improves performance, speed, usability and search visibility to raise traffic and conversions, in four types — technical, content, SEO and mobile. The eight techniques run from load speed and responsiveness through navigation, content, calls to action, SEO and bounce reduction to metric monitoring; framed properly they open with diagnosis and close with validation. Image optimization contributes speed, mobile experience, SEO and accessibility. Testing replaces opinion with evidence through split tests, usability sessions, heatmaps, recordings, funnel analysis, performance, cross-device, accessibility and crawl audits.

CHAPTER 2

# Publishing a Basic Website

***SYLLABUS EXTRACT***

*Publishing a basic website.*

**WHAT THIS CHAPTER COVERS**

- The nine official steps from requirement analysis to maintenance.
- What each step involves in practice, including the pre-launch technical setup that the nine-step list compresses.

**THE RECURRING SCENARIO**

"A college plans to publish its departmental website for admissions and student activities. Explain the complete process involved in designing and publishing the website." (CIE-III, Jun 2026 — 10 M) The official scheme lists nine steps. Name all nine in order, then expand.

## 2.1 The Nine Steps

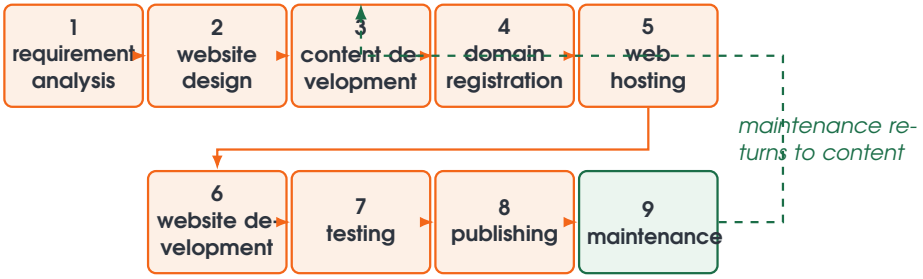

**Figure 2.1.** The nine steps. Maintenance is not an epilogue: it loops back into content development, because a departmental site that stops publishing notices has failed even though it is technically live.

**Table 2.1.** The nine official steps

| Step | Activity |
|---|---|
| **1. Requirement analysis** | Identify website objectives and user needs |
| **2. Website design** | Create the homepage, admission page, faculty page and event sections; produce wireframes and visual design |
| **3. Content development** | Add text, images, notices and contact details |

| Step | Activity |
|---|---|
| **4. Domain registration** | Purchase a domain name |
| **5. Web hosting** | Select a hosting service to store the website files |
| **6. Website development** | Build using HTML, CSS and JavaScript, or a content management system |
| **7. Testing** | Check website speed, links, responsiveness and security |
| **8. Publishing** | Upload the website files to the hosting server |
| **9. Maintenance** | Regularly update notices and student information |

## 2.2 Expanding Each Step

**Requirement analysis** Define the audience — prospective students, current students, parents, recruiters — the primary goal (admission enquiries), and the success metric.

**Information architecture** Map the sitemap and navigation before any visual design begins.

**Design** Wireframe first, then apply the design principles of Chapter 4, mobile-first.

**Content development** Write scannable, benefit-led copy; obtain and optimise images; prepare downloadable documents.

**Domain registration** Choose a short, memorable, relevant name; register with an accredited registrar; configure DNS.

**Hosting** Select shared, VPS, cloud or managed hosting based on expected traffic; ensure an SSL certificate for HTTPS.

**Development** Build with semantic HTML for accessibility and SEO; integrate a content management system so that non-technical staff can update notices.

**Pre-launch technical setup** Install analytics and Search Console, submit an XML sitemap, verify that `robots.txt` does not block the site, and set up backups.

**Testing** Functional testing of every link and form; cross-browser and cross-device testing; speed testing; security testing; an accessibility audit; and content proofreading.

**Publishing** Deploy files via SFTP or a version-controlled pipeline, point DNS to the host, and verify HTTPS and redirects.

**Post-launch maintenance** Regular content updates, software and plugin updates, security patching, backup verification, broken-link checks, and a monthly analytics review.

> **THE STEP THE NINE-STEP LIST HIDES**
>
> The official list moves straight from development to testing, but there is a *pre-launch technical setup* between them that is where sites are most often lost. Launching with analytics uninstrumented means the launch baseline is gone for ever; launching with a staging `noindex` directive still in place means the site is invisible to search engines. Name this step explicitly and the answer reads as practitioner knowledge rather than recitation.

**CHAPTER SUMMARY**

Publishing a website runs nine steps: requirement analysis, website design, content development, domain registration, web hosting, website development, testing, publishing and maintenance. In practice, information architecture precedes design, a pre-launch technical setup — analytics, Search Console, sitemap, `robots.txt` check, backups — sits between development and testing, and maintenance loops

back into content rather than ending the process.

CHAPTER 3

# User-Centred Design and Website Optimization

***SYLLABUS EXTRACT***

*User-centered Design and Website Optimization.*

**WHAT THIS CHAPTER COVERS**

- What user-centred design is, and the two principles to name.
- The seven principles of user-centred design.
- The five-stage UCD process.
- The ten questions website visitors arrive with, and how to answer each.

## 3.1 What User-Centred Design Is

**DEFINITION** • User-Centred Design

***User-centred design*** (UCD) is a design philosophy and process in which the needs, goals, context and limitations of the end user drive every decision at every stage, and in which the design is validated by real users rather than by the design team's judgement.

**TWO KEY PRINCIPLES — 2 MARKS**

(Improvement CIE, 4 Jun 2025 — 2 M) (1) Design based on an explicit understanding of the users, their tasks and their environment. (2) Iterative design that is continuously refined through user involvement and user-centred evaluation.

## 3.2 The Seven Principles

1. **Design is based on an explicit understanding of users, tasks and environments** — research first, design second.
2. **Users are involved throughout design and development** — not consulted once at the end.
3. **The design is driven and refined by user-centred evaluation** — usability testing at every iteration.
4. **The process is iterative** — design, test, learn, redesign.
5. **The design addresses the whole user experience**, not just the interface — including content, support and post-purchase.
6. **The design team includes multidisciplinary skills** and perspectives.

7. **Accessibility and inclusivity** — the design must work for users with differing abilities, devices and connection speeds.

## 3.3 The UCD Process

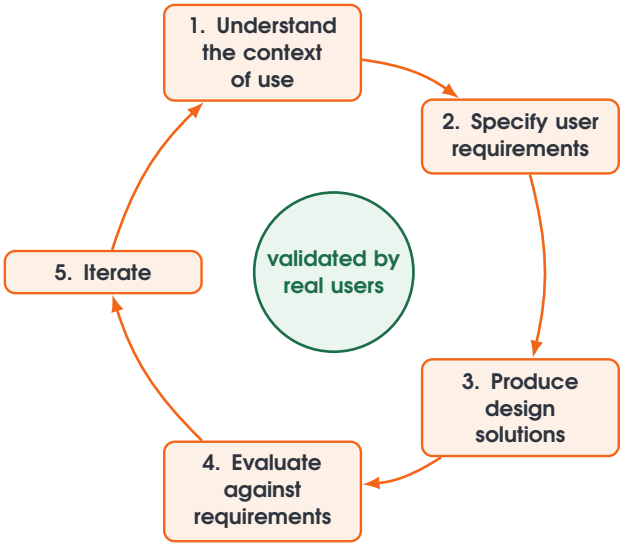

**Figure 3.1.** The UCD cycle. Iteration continues after launch: the loop has no exit, only release points.

1. **Understand the context of use** — who the users are, what they are trying to do, on what device, under what constraints.
2. **Specify user requirements** — translate research into concrete functional and content requirements.
3. **Produce design solutions** — information architecture, wireframes, prototypes, then visual design.
4. **Evaluate against requirements** — usability testing, heuristic evaluation, A/B testing, analytics review.
5. **Iterate** until the design meets the user requirements — then continue iterating after launch.

## 3.4 What Website Visitors Actually Look For

**HIGH YIELD**

"Discuss what website visitors typically look for when they land on a business webpage. Suggest effective design and content strategies to meet those expectations." (Improvement CIE, 4 Jun 2025 — 10 M) The strongest structure is to state each visitor *question* and pair it with the delivery mechanism, as below.

**Table 3.1.** The ten questions visitors arrive with

| What visitors want to know | How to deliver it |
|---|---|
| **"Am I in the right place?"** | A clear headline stating what the business does and for whom, visible without scrolling |
| **"What's in it for me?"** | Benefit-led copy, not feature lists or company history |

| What visitors want to know | How to deliver it |
|---|---|
| **"Can I trust you?"** | Testimonials, ratings, client logos, certifications, guarantees, real photographs, a physical address |
| **"How much does it cost?"** | Transparent pricing, or at least a clear pricing range; hidden pricing is a leading cause of abandonment |
| **"What do I do next?"** | One prominent, unambiguous call to action |
| **"Can I find what I came for?"** | Simple navigation and a working search |
| **"Is it fast?"** | A page that loads in under about three seconds |
| **"Does it work on my phone?"** | A fully responsive, mobile-first layout |
| **"How do I reach a human?"** | Visible contact options — phone, chat, e-mail, hours |
| **"Is it safe?"** | HTTPS, recognised payment logos, a clear privacy and returns policy |

### TWO ELEMENTS ON A WELL-OPTIMISED LANDING PAGE — 2 MARKS

(Improvement CIE, 4 Jun 2025 — 2 M) (1) A clear, benefit-led headline that matches the advertisement or link that brought the visitor there, and (2) a single prominent call-to-action button. Also acceptable: trust signals or testimonials; a hero image or product visual; a short form.

## CHAPTER SUMMARY

User-centred design lets the user's needs, goals, context and limitations drive every decision, and validates the result with real users rather than with the design team. Its seven principles require explicit user understanding, continuous user involvement, evaluation-driven refinement, iteration, whole-experience scope, multidisciplinary teams, and accessibility. The process runs understand the context, specify requirements, produce solutions, evaluate, iterate — and does not stop at launch. Visitors arrive with ten questions, from "am I in the right place" to "is it safe", and a well-designed page answers each one at the point it is asked.

CHAPTER 4

# Design Principles and Website Copy

***SYLLABUS EXTRACT***

*Design Principles and Website Copy.*

**WHAT THIS CHAPTER COVERS**

- The twelve core design principles, and the two to name.
- Krug's first law of usability and the seven usability attributes.
- How people actually use the web, and why they do not read.
- Billboard design — designing for scanning.
- The principles of effective website copy.
- How design principles and copy work as one system.

## 4.1 The Core Design Principles

**Table 4.1.** The core principles of web design

| Principle | What it requires |
|---|---|
| **Simplicity** | Remove everything that does not serve the user's goal. Every added element competes with the call to action |
| **Consistency** | The same colours, fonts, button styles, spacing and terminology on every page, so that users do not relearn the interface |
| **Visual hierarchy** | Make important elements visually prominent in proportion to their importance — size, weight, colour and position |
| **Balance and alignment** | Ordered use of a grid; alignment creates the perception of quality |
| **Contrast** | Sufficient contrast between text and background for readability and accessibility |
| **Whitespace** | Deliberate empty space that groups related items and gives the eye rest |
| **Typography** | Readable body size of 16 pixels or more, limited font families, generous line height, restrained line length |
| **Colour** | A limited, purposeful palette; one accent colour reserved for actions |
| **Responsiveness** | The layout adapts to mobile, tablet and desktop — mobile-first by default |

| Principle | What it requires |
|---|---|
| **Accessibility** | Alt text, keyboard navigation, colour-independent meaning, adequate tap targets |
| **Navigation clarity** | Conventional, shallow, labelled in the user's language and not in internal jargon |
| **Speed** | Performance is a design constraint, not an engineering afterthought |

**TWO PRINCIPLES — 2 MARKS**

"Mention any two principles of website design." (CIE-III, Jun 2026 — 2 M) The scheme answer is **simplicity** and **consistency** — these principles improve readability and user experience.

**TWO ASPECTS OF BRANDING AND CONSISTENCY — 2 MARKS**

(SEE, Oct/Nov 2023 — 2 M) (1) A consistent **visual identity** — the same logo, colour palette, typography, imagery style and button design applied on every page. (2) A consistent **tone of voice and terminology** in all copy, including microcopy, error messages and CTA labels, so that the brand reads as one coherent personality.

## 4.2 Krug's First Law, and the Seven Usability Attributes

**DON'T MAKE ME THINK**

A person of average — or below average — ability must be able to work out how to accomplish a task. The interface must be self-evident and self-explanatory. The good news is that usability is not rocket science.

**Table 4.2.** The seven usability attributes

| Attribute | Test question |
|---|---|
| **Useful** | Does it do what people actually need? |
| **Learnable** | Can they figure it out? |
| **Memorable** | Do they have to relearn it on every visit? |
| **Effective** | Does it get the job done? |
| **Efficient** | Does it do so in a reasonable amount of time? |
| **Desirable** | Do people want it? |
| **Delightful** | Is it enjoyable to use? |

## 4.3 How People Actually Use the Web

There is a gap between how designers imagine people use websites — reading carefully, like a novel — and how they actually do, which the heatmap reveals: ***scanning***, ***satisficing*** and muddling through. Satisficing means choosing the first option that plausibly works rather than searching for the best one.

Why don't people read instructions? Three reasons.

1. It isn't important to them — they just want it to work.
2. They are on a mission, and know they don't need to read everything.

3. If they find something that works, they stick to it rather than looking for a better way.

## 4.4 Billboard Design — Design for Scanning, Not Reading

- **Follow visual hierarchy** — make important elements visually prominent.
- **Omit needless words** — the art of not writing for the web. Happy talk must die; unnecessary instructions must die.
- **Make clickables obvious** — it must be instantly clear what can be clicked, to prevent frustration. Competition is one click away.
- **Provide breadcrumbs and street signs** — design clear, intuitive navigation so that users always know where they are and how to get back.

## 4.5 Principles of Effective Website Copy

- **Lead with the benefit, not the feature.** Users buy outcomes, not specifications.
- **Write for scanning** — short paragraphs, meaningful subheadings, bullet lists, bold key phrases.
- **Front-load the value** — put the conclusion in the first line, not the last.
- **Use the customer's language**, taken from reviews, support tickets and search queries — not internal jargon.
- **Be specific** — "ships in 24 hours" beats "fast delivery".
- **Use active voice and the second person** — "you get", not "customers are provided with".
- **Omit needless words.** Happy talk — welcome messages that say nothing — must go.
- **One idea per section**, with a heading that states that idea.
- **Make CTA copy explicit and active** — "Get my free trial" outperforms "Submit".
- **Answer objections in the copy where they arise**, rather than hiding them in an FAQ.

## 4.6 Design Principles and Copy as One System

**HIGH YIELD**

"Discuss the relationship between design principles and website copy. How can visual design elements and well-crafted content work together to enhance user experience and achieve website objectives?" (Improvement CIE, 28 Aug 2024 — 10 M)

Design and copy are not sequential layers; they are a single system. Copy without design is unreadable, and design without copy is empty.

**Table 4.3.** How each design principle serves the copy

| Design principle | How it serves the copy |
|---|---|
| **Visual hierarchy** | Determines the order in which the copy is read; the headline must be visually dominant because it carries the core message |
| **Typography** | Controls whether the copy is read at all — line length, size and spacing govern readability |
| **Whitespace** | Groups related copy and gives the reader cognitive rest, increasing comprehension |
| **Contrast** | Ensures the copy is legible, and directs attention to the CTA text |

| Design principle | How it serves the copy |
|---|---|
| **Consistency** | Means the same tone of voice and the same button language appear everywhere, building trust |
| **Imagery** | Demonstrates visually what the copy claims verbally — proof, not decoration |
| **Responsiveness** | Ensures the copy retains its hierarchy on a small screen, where most users read it |

### EFFECTIVE INTEGRATION

A **hero section** where a benefit headline, a supporting sub-line, a product image and one accent-coloured CTA button occupy the top of the page with nothing competing.

A **pricing table** where visual weight highlights the recommended plan while the copy names the buyer it suits.

A **testimonial block** where a customer photograph and a short pull-quote in large type do together what neither could do alone.

### THE TWO CHARACTERISTIC FAILURES

A beautiful layout with vague copy that never says what the company sells — or strong copy set in 11-pixel grey text on a white background, which nobody reads.

Each failure is a whole discipline working without the other.

## CHAPTER SUMMARY

Twelve principles govern web design — simplicity, consistency, visual hierarchy, balance and alignment, contrast, whitespace, typography, colour, responsiveness, accessibility, navigation clarity and speed — of which simplicity and consistency are the two to name. Krug's first law is don't make me think, and usability is tested against seven attributes. People scan, satisfice and muddle through rather than reading, so pages must be designed as billboards. Effective copy leads with benefits, is written for scanning, front-loads value, uses the customer's language, is specific and active, omits needless words and answers objections where they arise. Design and copy are one system: hierarchy sets reading order, typography decides whether copy is read, whitespace aids comprehension, contrast directs attention, consistency builds trust, imagery supplies proof and responsiveness preserves hierarchy on the screen most people use.

CHAPTER 5

# Website Metrics and Developing Insight

***SYLLABUS EXTRACT***

*Website Metrics & Developing Insight.*

**WHAT THIS CHAPTER COVERS**

- The key website metrics, and the four to name if only four are asked for.
- How metrics help optimise for marketing effectiveness.
- The progression from data to decision — what makes a metric an insight.
- User behaviour analysis and its impact on optimisation.

## 5.1 Key Website Metrics

**Table 5.1.** Key website metrics

| Metric | What it measures | What it tells you |
|---|---|---|
| **Traffic (users, sessions)** | Volume of visitors | Whether acquisition is working |
| **Bounce rate** | Percentage leaving after one page without interaction | Relevance and first-impression quality |
| **Average session duration** | Time spent per visit | Depth of engagement |
| **Pages per session** | Pages viewed per visit | Whether users explore or leave |
| **Conversion rate** | Percentage completing the desired action | Whether the site produces business value |
| **Page load time and Core Web Vitals** | Speed and stability | Technical health and its effect on abandonment |
| **Traffic sources** | Channel mix | Which marketing investments work |
| **New against returning visitors** | Retention split | Whether the site earns repeat visits |
| **Exit pages** | Where sessions end | Which page is losing people |
| **Cart abandonment rate** | Percentage starting but not completing checkout | Friction in the purchase flow |
| **Cost per acquisition** | Spend divided by conversions | Efficiency of the whole funnel |

| Metric | What it measures | What it tells you |
|---|---|---|
| **Goal value and revenue** | Money produced | The bottom line |

**THE FOUR-METRIC ANSWER — 2 MARKS**

"List any four key metrics used to measure the success of a website." (Improvement CIE, 28 Aug 2024 — 2 M) Name **traffic, bounce rate, conversion rate and average session duration**. These four cover acquisition, relevance, outcome and engagement respectively, which reads as a considered selection rather than an arbitrary list.

## 5.2 How Metrics Help Optimise for Marketing Effectiveness

**MODEL ANSWER — 2 MARKS**

(Improvement CIE, 4 Jun 2025 — 2 M)

- They **locate the problem precisely** — a high bounce rate on one landing page is actionable, whereas "the site isn't working" is not.
- They **rank the fixes by impact** — the step losing the most users is fixed first.
- They **prove or disprove changes** through before-and-after comparison and A/B testing.
- They **reallocate budget** towards the channels producing conversions rather than traffic.
- They **reveal segment-specific failures** — for example a mobile-only checkout bug hidden by desktop averages.
- They **set realistic targets** by grounding goals in historical baselines.

## 5.3 Developing Insight — From Data to Decision

**A METRIC IS NOT AN INSIGHT**

The progression runs: **data** → **metric** → **insight** → **decision** → **action** → **measured result**. A dashboard stops at the second step, which is why dashboards on their own change nothing.

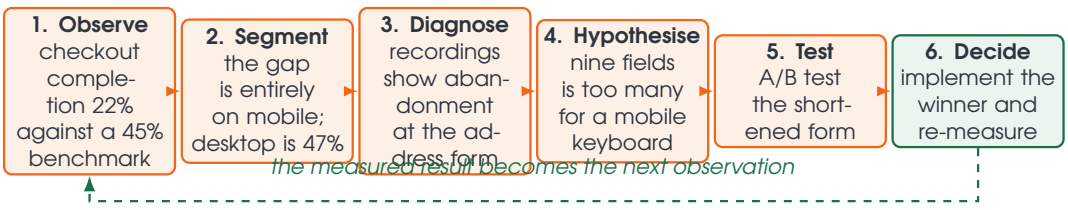

**Figure 5.1.** The six moves that turn a metric into an insight. Steps 2 and 3 are the ones usually skipped, and they are the ones that make the hypothesis worth testing.

1. **Observe** — the checkout completion rate is 22%, against an industry benchmark of 45%.
2. **Segment** — the gap is entirely on mobile; desktop is at 47%.
3. **Diagnose qualitatively** — session recordings show mobile users abandoning at the address form.
4. **Hypothesise** — "the nine-field address form is too long for a mobile keyboard; auto-fill and postcode lookup will reduce abandonment."

5. **Test** — run an A/B test on the new form.
6. **Decide and implement** the winner.
7. **Re-measure** and feed the result back into the next hypothesis.

## 5.4 User Behaviour Analysis

**MODEL ANSWER — 2 MARKS**

"What is the impact of user behavior analysis on website optimization?" (SEE, Oct/Nov 2023 — 2 M)
User behaviour analysis — heatmaps, scroll maps, click maps, session recordings and funnel reports — shows what users actually do rather than what they say or what the business assumes.

**Its impact:** it identifies friction points precisely; it reveals ignored content and invisible calls to action; it exposes rage clicks and dead clicks on non-functional elements; it shows how far down the page users actually scroll, which determines what must be placed above the fold; and it generates the hypotheses that A/B testing then validates. Without it, optimisation is guesswork.

**CHAPTER SUMMARY**

Website success is measured on traffic, bounce rate, session duration, pages per session, conversion rate, load time and Core Web Vitals, traffic sources, new against returning visitors, exit pages, cart abandonment, cost per acquisition and revenue — and if only four are wanted, traffic, bounce rate, conversion rate and session duration cover acquisition, relevance, outcome and engagement. Metrics help by locating problems precisely, ranking fixes by impact, proving changes, reallocating budget, exposing segment-specific failures and grounding targets. A metric becomes an insight only through observation, segmentation, qualitative diagnosis, hypothesis, test and decision. User behaviour analysis supplies the diagnosis that makes hypotheses worth testing.

CHAPTER 6

# Mobile Advertising and Mobile Marketing

**SYLLABUS EXTRACT**

*Mobile Marketing: Difference between mobile advertising and marketing.*

**WHAT THIS CHAPTER COVERS**

- What mobile marketing is, and the scale of mobile media consumption.
- The difference between mobile advertising and mobile marketing — the single most repeated question in this unit.
- Mobile web marketing against mobile app marketing.
- The benefits of mobile marketing, and its five real limitations.
- The seven characteristics of a successful mobile campaign.
- Geo-targeting and geo-fencing.

## 6.1 What Mobile Marketing Is

**DEFINITION** • Mobile Marketing

***Mobile marketing*** is a multi-channel digital marketing strategy aimed at reaching a target audience on their smartphones, tablets and other mobile devices — through mobile websites, e-mail, SMS and MMS, social media, apps and push notifications.

Mobile is disrupting the way people engage with brands. Everything that can be done on a desktop is now available on a mobile device — from opening an e-mail to visiting a website to reading content, all through a small screen. About **80%** of internet users own a smartphone, and mobile platforms host up to **60%** of digital media consumption.

## 6.2 Mobile Advertising Against Mobile Marketing

**THE MOST REPEATED QUESTION IN UNIT IV**

The same distinction, set in three different phrasings. (CIE-III, Jun 2026; Improvement CIE, 4 Jun 2025; Improvement CIE, 28 Aug 2024 — 2 M each)

**THE ONE-LINE ANSWER**

Mobile **advertising** focuses mainly on paid promotional messages delivered to mobile devices. Mobile

**marketing** includes overall customer engagement through SMS, apps, social media and mobile websites.

In one line: **mobile advertising is a paid subset of the broader mobile marketing strategy.**

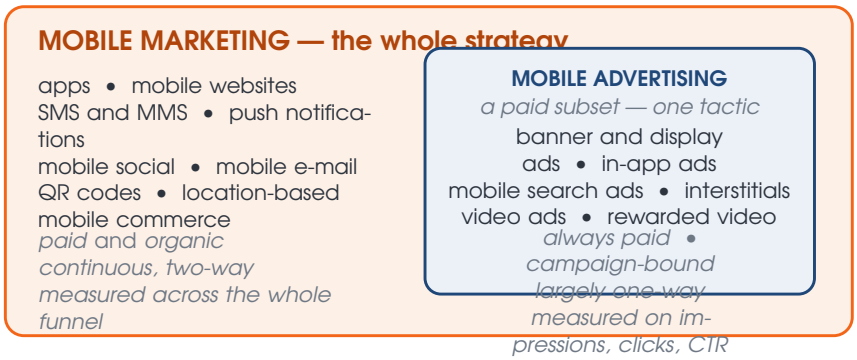

**Figure 6.1.** The containment relation is the answer. Mobile advertising sits *inside* mobile marketing: it is one paid tactic within a strategy that also runs organic, continuous and two-way activity.

**Table 6.1.** Mobile advertising against mobile marketing

| Basis | Mobile Advertising | Mobile Marketing |
|---|---|---|
| **Scope** | Narrow — one tactic | Broad — the whole strategy |
| **Nature** | Always paid | Paid and organic |
| **Channels** | Banner advertisements, in-app advertisements, interstitials, mobile search advertisements, video advertisements | Apps, mobile websites, SMS and MMS, push notifications, social, e-mail, QR codes, location-based marketing, mobile commerce |
| **Objective** | Immediate visibility, clicks and conversions | Long-term engagement, relationship and retention |
| **Duration** | Campaign-bound | Continuous |
| **Interaction** | Largely one-way | Two-way and interactive |
| **Measurement** | Impressions, clicks, click-through rate, cost per install | Full-funnel: engagement, retention, lifetime value |

## 6.3 Mobile Web Marketing Against Mobile App Marketing

**HIGH YIELD**

"List any two differences between Mobile Web marketing and Mobile App marketing." (SEE, Oct/Nov 2023 — 2 M) The two strongest pairs are *access and reach*, and *push and device access*.

**Table 6.2.** Mobile web against mobile app marketing

| Basis | Mobile Web Marketing | Mobile App Marketing |
|---|---|---|
| **Access** | Through a browser; no installation required | Requires download and installation |

| Basis | Mobile Web Marketing | Mobile App Marketing |
|---|---|---|
| **Reach** | Broader — anyone with a browser and a link | Narrower — only those who install |
| **Discoverability** | Found through search engines (SEO) | Found through app store optimisation (ASO) |
| **Engagement depth** | Lower; session-based | Much higher; repeat usage and habit formation |
| **Push notifications** | Limited, via web push | Full push notification capability |
| **Offline use** | Generally unavailable | Possible |
| **Device features** | Limited access to camera, GPS, contacts | Full access to device hardware and sensors |
| **Cost** | Lower to build and maintain | Higher — separate platform builds |

## 6.4 Benefits of Mobile Marketing

- **Reach** — mobile phones reach people about 15% more than internet marketing does, and mobile advertising draws more clicks.
- **Accessibility** — the mobile device is always at hand; mobile advertising follows people everywhere.
- **Time factor** — people are available on mobile around the clock, which is not possible with desktops.
- **Cost** — mobile advertising costs much less than other types of advertising, allowing more advertising for the same spend.
- **Personalised** — the message can be tailored; people find mobile messages more intimate than other internet marketing methods.
- **Reaches a broader market** — smartphones and tablets are cheaper, smaller and more portable than PCs, so people previously excluded by financial, geographical or technological barriers are now online.
- **Instantaneous results** — we always carry our phones, and they are usually switched on, so the message is received the moment it is sent.
- **Easy to work with** — creating elements for mobile is simpler and less costly than for desktop; promotions such as downloadable coupons can be stored and redeemed without an internet connection.
- **Convenient to use** — the small screen limits content, which forces creators to keep it basic and simple; simpler content also adapts better across mobile platforms.
- **Tracking response** — user response can be tracked almost instantaneously, and phone numbers work well as unique identifiers because people keep them longer than e-mail addresses, which helps build accurate buyer personas.
- **Huge viral potential** — mobile content is easily shared, producing a domino effect and extra exposure at no additional cost.
- **Mass communication made easy** — more people own phones than computers, and mobile allows geo-targeting through GPS and Bluetooth as well as demographic targeting.
- **Micro-blogging benefits** — platforms such as Instagram and X place influence in the hands of ordinary people, so anyone can act as an influencer.

- **Mobile payment** — secure mobile payment environments let users purchase and pay bills without physical currency.

## 6.5 Limitations

THE FIVE REAL CONSTRAINTS

- **Platforms too diverse** — mobile devices have no single standard; screen sizes vary and platforms use different operating systems and browsers, so one campaign for all of them is difficult.
- **Privacy issues** — users want their privacy respected, so marketers must offer clear opt-out instructions.
- **Navigation on a mobile phone** — small screens and no mouse make navigation difficult even with touch, so many advertisements go untouched because reviewing each one is tedious.
- **Ad fatigue and intrusiveness** — push notifications and interstitials are easily overused, driving uninstalls.
- **Regulatory constraints** — SMS and push marketing are governed by consent regulations, including do-not-disturb registries in India and GDPR in the European Union.

## 6.6 The Seven Characteristics of a Successful Mobile Campaign

Derived from the Mobile Marketing Association's interviews with members and its awards analysis.

1. **Think "mobile first".** The most successful campaigns are developed with a mobile-first mentality; starting from a mobile perspective gives the campaign a stronger foundation. Consider mobile the *connective tissue* to all media, since it supports and strengthens every channel.
2. **Leverage multi-screen usage patterns.** Smartphone and tablet users work across screens — watching a match on television while using the app for other scores, or posting while watching a show. Brands leverage cross-screen usage to capture attention.
3. **Utilise the full spectrum of mobile tools and applications.** Mobile isn't just a mobile website *or* a display campaign *or* an app — it is a mobile website *and* a display campaign *and* an app, and much more.
4. **Integrate the mobile campaign into the traditional campaign.** One manufacturer generated 39 million total views by integrating its game-time app with a concurrent televised championship campaign. Mobile campaigns should never be produced in a silo.
5. **Create a campaign that works across multiple screens.** Tablet users are often at the *top* of the sales funnel doing in-depth initial research, while smartphone users are often at the *bottom*, ready to purchase.
6. **Leverage every phase of the sales funnel.** Mobile visitors use it for search and discovery as well as for purchase and brand connection.
7. **Test your way to success.** Mobile is digital by nature, making it perfect for tracking and measuring. The second half of the battle is sifting through those insights and adjusting to improve future performance.

THE CLOSING IDEA

Mobile isn't simply a new sales channel or marketing tool. It is a revolutionary new medium that is transforming not only the way consumers connect with brands, but how they make purchases and stay engaged with them.

# 6.7 Geo-Targeting

**DEFINITION** • Geo-Targeting

***Geo-targeting*** in mobile marketing is the delivery of content, offers or advertisements to users based on their geographic location, determined through GPS, Wi-Fi, Bluetooth beacons, cell-tower triangulation or IP address. (SEE, Jun/Jul 2025 — 2 M)

### THE ROLE OF GEO-TARGETING

It makes messages locally relevant and timely — sending an offer when the user is physically near the store (***geo-fencing***); enabling "near me" discovery and click-to-map directions; supporting location-specific pricing, language and inventory; driving footfall to physical outlets; and improving ROI by eliminating spend on users outside the serviceable area.

## CHAPTER SUMMARY

Mobile marketing is a multi-channel strategy reaching users on mobile devices through websites, e-mail, SMS, social, apps and push notifications; about 80% of internet users own a smartphone and mobile carries up to 60% of digital media consumption. Mobile advertising is the paid subset of that strategy — narrow, always paid, campaign-bound, one-way and measured on clicks — while mobile marketing is broad, paid and organic, continuous, two-way and measured across the whole funnel. Mobile web reaches more people with less depth; apps reach fewer people with far more depth, full push capability, device access and offline use. The benefits run from reach, accessibility and round-the-clock availability through cost, personalisation and viral potential to mobile payment; the limitations are platform fragmentation, privacy, small-screen navigation, ad fatigue and consent regulation. Seven characteristics mark a successful campaign, beginning with mobile-first thinking and ending with continuous testing. Geo-targeting delivers location-relevant offers and geo-fencing triggers them at a boundary.

CHAPTER 7

# Utilizing Mobile Marketing for Sales Promotions

***SYLLABUS EXTRACT***

*Utilizing mobile marketing for sales promotions.*

**WHAT THIS CHAPTER COVERS**

- Push notifications — what they are, how they serve sales promotion, and the eight strategies that make them work.
- Ten mobile sales-promotion techniques.
- The mobile advertising formats, including click-to-call and click-to-map.

## 7.1 Push Notifications

**DEFINITION** • Push Notification

A ***push notification*** is a short message sent by an app directly to a user's device screen, appearing even when the app is not open.

**HIGH YIELD**

"Discuss briefly on Push Notification in Mobile Marketing. Explain how businesses can use them to engage and retain Mobile App users? Provide examples of effective push notification strategies." (SEE, Oct/Nov 2023, Q8a — 8 M; Improvement CIE, 28 Aug 2024 — 2 M)

### 7.1.1 How push notifications enhance sales promotions

- **Immediacy** — a flash sale can be announced to the entire installed base within seconds.
- **Urgency** — countdown and limited-stock messaging drives immediate action.
- **Personalisation** — notifications triggered by browsing or purchase history: "the jacket you viewed is now 30% off".
- **Cart recovery** — abandoned-cart reminders sent minutes after abandonment.
- **Geo-triggered offers** — a coupon delivered when the user enters a defined radius around a store.
- **Re-engagement** — win-back messages to users who have not opened the app in 30 days.
- **Loyalty and replenishment** — points-expiry alerts and reorder reminders for consumables.

### 7.1.2 Eight effective push notification strategies

1. **Segment before sending** — never broadcast to the entire base; irrelevant pushes drive uninstalls.
2. **Time it correctly** — send within the user's active hours in their own time zone.
3. **Cap frequency** — set an explicit limit per user per week.
4. **Write with a single clear benefit and a verb**, within roughly 40 characters for the title.
5. **Use rich media** — images and action buttons materially raise engagement.
6. **Deep-link the notification** straight to the relevant screen, never to the home screen.
7. **Ask permission at the right moment** — request notification consent after the user has experienced value, not on first launch.
8. **A/B test** copy, timing and creative, and measure opt-out rate as carefully as click rate.

> **THE METRIC MOST OFTEN IGNORED**
>
> Push campaigns are usually judged on open rate alone. The **opt-out rate** is the more important number, because an opt-out is permanent: a campaign that lifts opens by 5% while pushing 2% of the base to disable notifications has destroyed future reach to buy present clicks.

## 7.2 Mobile Sales-Promotion Techniques

Table 7.1. Ten mobile sales-promotion techniques

| Technique | How it works |
|---|---|
| **SMS campaigns** | High open rate, often above 90%; best for time-critical offers and verified coupon codes |
| **Mobile coupons** | Downloadable or in-app codes redeemable in store or online; can be used offline |
| **In-app exclusive offers** | Discounts available only through the app, driving installs and app engagement |
| **Flash sales via push** | Time-boxed offers announced by push to create urgency |
| **Location-based offers** | Geo-fenced coupons triggered near a store |
| **QR codes** | Bridge print, packaging and outdoor media to a mobile landing page or offer |
| **Gamification** | Spin-the-wheel, scratch cards and loyalty streaks to drive repeat opens |
| **Mobile wallet passes** | Offers saved to a device wallet with location-triggered reminders |
| **Referral programmes** | One-tap share of a referral code from within the app |
| **Mobile-exclusive early access** | App users get the sale hours before the website |

## 7.3 Mobile Advertising Formats

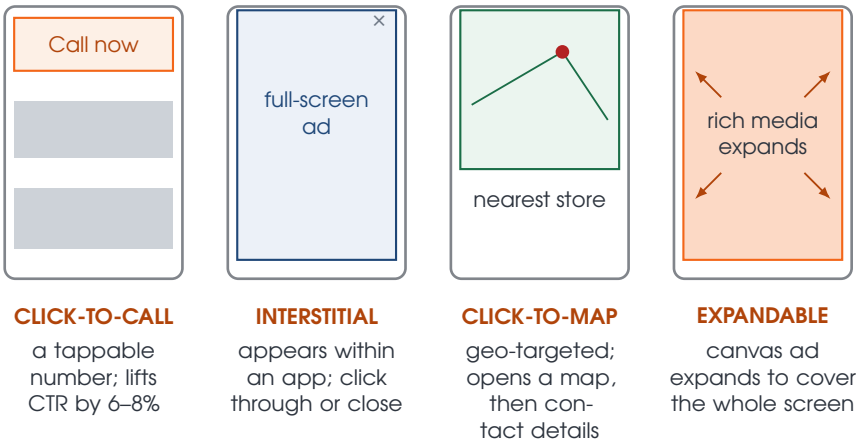

**Figure 7.1.** Four of the principal formats. Each trades intrusiveness against intent: click-to-call and click-to-map serve a user already looking for a business, while interstitials and expandables interrupt one who is not.

**Table 7.2.** Mobile advertising formats

| Format | Description |
|---|---|
| **Click-to-Call** | Displays a phone number the user can tap to be connected directly to a call centre or sales centre. Research shows click-to-call advertisements drive a 6–8% average increase in click-through rates |
| **Interstitials** | Interactive advertisements that appear within an app; once the user opens the app the interstitial displays, and the user can click through to a landing page or close it |
| **Click-to-Map** | Geo-targeting sends messages to users in a specific location; clicking the advertisement opens a map identifying the nearest store, and clicking the map displays the contact information on the smartphone |
| **Canvas and expandable advertisements** | When clicked, the advertisement expands to cover the entire phone screen; it can be animated or incorporate rich media to enhance the user experience |
| **Mobile search advertisements** | Paid results on mobile search pages, often with location extensions |
| **In-app banner and native advertisements** | Display units embedded in the app's content flow |
| **Rewarded video** | The user watches a video in exchange for in-app currency or content — high completion rates |

**DO NOT SEND MOBILE ADVERTISING TO A STATIC PAGE**

Mobile display advertisements are effective for building brand awareness and generating clicks, leads and conversions. They need not link to a static landing page — linking to a *dynamic* page or experience produces improved engagement and higher conversions.

## CHAPTER SUMMARY

A push notification is a short message an app sends to the device screen even when closed, and it serves sales promotion through immediacy, urgency, personalisation, cart recovery, geo-triggered offers, re-engagement and loyalty prompts. Eight strategies make it work: segment, time correctly, cap frequency, write one benefit with a verb, use rich media, deep-link, ask permission after value, and A/B test while watching opt-out as closely as opens. Ten promotion techniques span SMS, coupons, in-app exclusives, push flash sales, geo-fenced offers, QR codes, gamification, wallet passes, referrals and mobile-exclusive early access. The advertising formats run from click-to-call, which lifts click-through by 6–8%, through interstitials, click-to-map, canvas and expandable units, mobile search advertisements, in-app banners and rewarded video — and all of them convert better into a dynamic destination than a static one.

CHAPTER 8

# Online Applications

***SYLLABUS EXTRACT***

*Online applications.*

**WHAT THIS CHAPTER COVERS**

- The eight reasons apps are effective marketing tools.
- The four app business models.
- The three rules of app creation strategy.
- The eleven features an app should incorporate.
- Designing a mobile website, and why responsive design superseded it.
- Mobile analytics — its significance and the seven metric groups.

## 8.1 Why Apps Matter for Marketing

**HIGH YIELD**

"How do online applications serve as effective tools for mobile marketing? What are the key features that businesses should incorporate into their apps to ensure they are maximizing marketing potential?" (Improvement CIE, 28 Aug 2024 — 10 M)

- **Permanent presence** — the app icon sits on the home screen, creating continuous brand visibility.
- **Push notification access** — a direct, free, owned communication channel that does not depend on an algorithm.
- **Rich behavioural data** — in-app analytics reveal exactly how each user behaves, enabling deep personalisation.
- **Higher engagement and conversion** — app users typically browse more, convert more and spend more than mobile-web users.
- **Loyalty and habit formation** — points, streaks and saved preferences increase switching cost.
- **Device capability access** — camera, GPS, biometrics, wallet and contacts enable experiences the web cannot match.
- **Offline availability** — content and coupons remain usable without a connection.
- **Frictionless repeat purchase** — saved payment details and one-tap reorder.

## 8.2 App Business Models

- Free apps supported by advertising.

- Paid apps supported by download fees.
- Premium apps supported by in-app commerce.
- Free apps supported by brands interested in connecting with customers.

## 8.3 App Creation Strategy — Three Rules

> **THE THREE RULES**
>
> **1. Make sure your app solves a problem.** The most effective apps solve some problem for the user — they facilitate a purchase, provide content, create brand preference, or some combination. Analyse which of these your app will solve and begin the design process from there.
>
> **2. Get inside the mind of your user.** Understand how the user will engage with the app — will they be at home or in the office? Do they want information, or simply to engage with the brand?
>
> **3. Design with the end in mind.** Is the purpose to create brand preference? To facilitate a financial transaction? To reduce customer churn? Or all of these?

## 8.4 Key Features an App Should Incorporate

- **Fast onboarding** — value visible before any sign-up demand.
- **Personalised home screen** driven by behaviour.
- **Search and filtering** that works.
- **Push notification preferences** the user controls.
- **In-app offers, loyalty and wallet.**
- **One-tap checkout** with saved payment methods.
- **Order tracking and history.**
- **In-app support and chat.**
- **Social sharing and referral.**
- **Offline mode** for core content.
- **Analytics instrumentation** on every meaningful event.

## 8.5 Creating a Mobile Website

With a smartphone you can browse any website available on a PC, but those sites are generally unsuitable for a phone because they were not designed for one. The screen is much smaller and behaviour differs — a user may browse and read for hours on a desktop, but on a phone will typically read only a small amount of information over short periods. How the information is displayed, and how much of it there is, must therefore be reconsidered.
When designing a mobile website, consider:

- You can only view one screen at a time — design the navigation accordingly.
- There is not much room for text, so don't use much.
- Use large buttons for key calls to action.
- Think about font usage — make sure the important content really stands out.

> **WHY RESPONSIVE DESIGN SUPERSEDED THE SEPARATE MOBILE SITE**
>
> The modern equivalent of this advice is ***responsive design*** — one codebase that adapts fluidly to every screen. It is now preferred over maintaining a separate mobile site, because it avoids duplicate content,

splits no ranking authority and halves maintenance.

## 8.6 Mobile Analytics

**HIGH YIELD**

"Explain the significance of mobile analytics in mobile marketing campaigns. What key metrics should marketers track to measure the success of their mobile strategies?" (SEE, Oct/Nov 2023, Q8b — 8 M)

**SIGNIFICANCE**

Mobile analytics is the only way to see behaviour *inside* an app, where web analytics cannot reach. It reveals which acquisition sources deliver users who actually retain rather than merely install; it exposes where users abandon the onboarding or checkout flow; it enables cohort analysis so that retention can be compared across releases; it supports A/B testing of in-app experiences; and it links marketing spend to lifetime value rather than to installs.

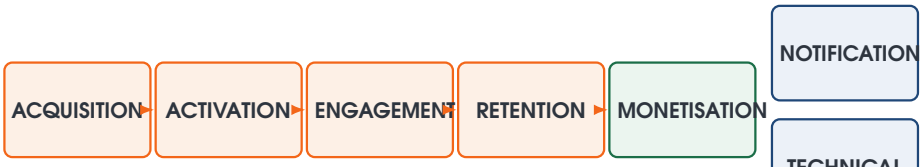

**Figure 8.1.** Five funnel groups plus two cross-cutting ones. Judging a campaign on installs alone stops at the first box.

**Table 8.1.** The seven mobile analytics metric groups

| Metric group | Metrics |
|---|---|
| **Acquisition** | Installs, cost per install, install source and attribution, click-to-install rate |
| **Activation** | Onboarding completion rate, time to first key action, registration rate |
| **Engagement** | Daily and monthly active users, stickiness (daily divided by monthly actives), session length, sessions per user, screens per session |
| **Retention** | Day-1, Day-7 and Day-30 retention, churn rate, cohort retention curves |
| **Monetisation** | Conversion rate, average revenue per user, average order value, lifetime value, the ratio of lifetime value to customer acquisition cost |
| **Notification performance** | Push opt-in rate, delivery rate, open rate, opt-out rate |
| **Technical** | Crash rate, app load time, API latency, app store rating |

## CHAPTER SUMMARY

Apps are effective marketing tools because they give permanent home-screen presence, owned push access, rich behavioural data, higher engagement and conversion, loyalty and habit formation, device capability access, offline availability and frictionless repeat purchase. Four business models fund them. Three rules govern their creation: solve a real problem, understand how the user will engage, and design with the end purpose in mind. Eleven features maximise marketing potential, from fast onboarding to full analytics instrumentation. A mobile site must be designed for one screen at a time, little text and large buttons — and responsive design has superseded the separate mobile site because it avoids duplicate content and split authority. Mobile analytics is the only view inside the app, and it is measured in seven groups: acquisition, activation, engagement, retention, monetisation, notification performance and technical health.

APPENDIX A

# Syllabus-to-Chapter Concordance

This appendix exists so that coverage can be *audited* rather than assumed. The left-hand column reproduces the Unit IV syllabus descriptor phrase by phrase, in the order the official document prints it. The right-hand column gives the chapter and section that carries it. Every phrase resolves to a location, and no numbered chapter of this volume contains material that is not traceable to a phrase in this table.

Table A.1. Concordance for Unit IV

| Syllabus phrase | Where it is covered |
|---|---|
| **First half — Web Design** | |
| **Web design, optimization of websites** | Chapter 1 entire. What web design is § 1.1; UI and UX § 1.2; website structure § 1.3; website optimization defined § 1.4; the eight techniques § 1.5; image optimization § 1.6; testing and optimisation § 1.7. |
| **Publishing a basic website** | Chapter 2 entire. The nine official steps § 2.1; each step expanded, including the pre-launch technical setup § 2.2. |
| **User-centered Design and Website Optimization** | Chapter 3 entire. What UCD is § 3.1; the seven principles § 3.2; the UCD process § 3.3; what visitors look for § 3.4. Website optimization itself is carried in § 1.4–1.7. |
| **Design Principles and Website Copy** | Chapter 4 entire. The core design principles § 4.1; Krug's first law and the usability attributes § 4.2; how people use the web § 4.3; billboard design § 4.4; copy principles § 4.5; design and copy as one system § 4.6. |
| **Website Metrics & Developing Insight** | Chapter 5 entire. Key metrics § 5.1; how metrics aid optimisation § 5.2; from data to decision § 5.3; user behaviour analysis § 5.4. |
| **Second half — Mobile Marketing** | |
| **Difference between mobile advertising and marketing** | Chapter 6 entire. What mobile marketing is § 6.1; advertising against marketing § 6.2; mobile web against app § 6.3; benefits § 6.4; limitations § 6.5; the seven campaign characteristics § 6.6; geo-targeting § 6.7. |
| **Utilizing mobile marketing for sales promotions** | Chapter 7 entire. Push notifications § 7.1; ten promotion techniques § 7.2; advertising formats § 7.3. |

| Syllabus phrase | Where it is covered |
|---|---|
| **Online applications** | Chapter 8 entire. Why apps matter § 8.1; business models § 8.2; the three creation rules § 8.3; the feature checklist § 8.4; creating a mobile website § 8.5; mobile analytics § 8.6. |

### TWO NOTES ON COVERAGE

**Deliberate overlap with Volume 1.** Krug's first law, the seven usability attributes and the landing-page material appear in Unit I under "Optimize Website UX & Landing Pages" and again here under "Design Principles". Both descriptors name them, so both volumes carry them. Chapter 4 gives the design-side treatment; Volume 1 Chapter 9 gives the content-marketing side.

**No off-syllabus appendix.** As in Volume 3, every topic in the source material for Unit IV maps to a descriptor phrase, so nothing had to be set aside.

APPENDIX B

# Previous-Year Question Bank — Unit IV

Every question in this appendix is reproduced from an actual RVCE Marketing Management Continuous Internal Evaluation or Semester End Examination paper for this course. Answers and pointers follow the official schemes of valuation where those were released.

## Part A — Two-Mark Questions

1. **What is Website Optimization?** (CIE-III, Jun 2026 — 2 M)
   The process of improving website performance, speed, usability and search visibility in order to increase traffic and conversions. *See* § 1.4.

2. **Mention any two principles of website design.** (CIE-III, Jun 2026 — 2 M)
   Simplicity and consistency — these principles improve readability and user experience. *See* § 4.1.

3. **Differentiate Mobile Advertising and Mobile Marketing. / What is the key difference between mobile advertising and mobile marketing? / Define mobile advertising in one sentence. How does it differ from mobile marketing?** (CIE-III, Jun 2026; Improvement CIE, 4 Jun 2025; Improvement CIE, 28 Aug 2024 — 2 M)
   Mobile advertising focuses mainly on paid promotional messages delivered to mobile devices. Mobile marketing includes overall customer engagement through SMS, apps, social media and mobile websites. In one line: mobile advertising is a paid subset of the broader mobile marketing strategy. *See* § 6.2.

4. **Mention two key principles of User-Centered Design in website development.** (Improvement CIE, 4 Jun 2025 — 2 M)
   (1) Design based on an explicit understanding of the users, their tasks and their environment. (2) Iterative design that is continuously refined through user involvement and user-centred evaluation. *See* § 3.1.

5. **How can website metrics help in optimizing a website for marketing effectiveness?** (Improvement CIE, 4 Jun 2025 — 2 M)
   They locate problems precisely, rank fixes by impact, prove or disprove changes through testing, reallocate budget to converting channels, and expose segment-specific failures hidden by averages. *See* § 5.2.

6. **State two key elements that visitors commonly expect to see on a well-optimized landing page.** (Improvement CIE, 4 Jun 2025 — 2 M)
   A clear benefit-led headline matching the advertisement or link that brought them there, and a single prominent call-to-action button. Also acceptable: trust signals such as testimonials or ratings. *See* § 3.4.

7. **How does image optimization contribute to overall website performance?** (Improvement CIE, 28 Aug 2024 — 2 M)
   It reduces page weight and load time, improving Core Web Vitals and lowering bounce rate; improves the mobile experience on slow connections; improves SEO through descriptive file names and ALT text; and improves accessibility. *See* § 1.6.

8. **List any four key metrics used to measure the success of a website.** (Improvement CIE, 28 Aug 2024 — 2 M)
   Traffic (users or sessions), bounce rate, average session duration and conversion rate. Also acceptable: pages per session, page load time, traffic sources, new against returning visitors. *See* § 5.1.

9. **How can push notifications be used in mobile marketing to enhance sales promotions?** (Improvement CIE, 28 Aug 2024 — 2 M)
   They deliver time-critical offers instantly to the installed base, create urgency for flash sales, recover abandoned carts, trigger location-based coupons when a user nears a store, and re-engage lapsed users — all through an owned channel that no algorithm throttles. *See* § 7.1.

10. **How can user-friendly design impact the overall effectiveness of a website?** (Improvement CIE, 28 Aug 2024 — 2 M)
    It reduces cognitive effort so that visitors can complete their task, which lowers bounce rate, increases time on site and pages per session, raises conversion rate, builds trust in the brand, encourages return visits, and — because search engines now mimic human preferences — indirectly improves organic ranking. *See* § 4.2.

11. **Why is it important to integrate SEO in website development?** (SEE, Jun/Jul 2025 — 2 M)
    Architecture, URLs, rendering method, speed, heading structure and analytics are all fixed at build time. Retro-fitting SEO is expensive, forces URL changes that risk losing ranking authority, and often leaves staging `noindex` directives live in production. *See* § 2.2, and Volume 2 § 8.2.

12. **What is the role of geo-targeting in mobile marketing?** (SEE, Jun/Jul 2025 — 2 M)
    Geo-targeting delivers content and offers based on the user's location, making messages locally relevant and timely — driving footfall through geo-fenced offers, enabling "near me" discovery and click-to-map directions, supporting location-specific pricing and inventory, and improving ROI by eliminating spend outside the serviceable area. *See* § 6.7.

13. **List any two aspects of branding and consistency in web design.** (SEE, Oct/Nov 2023 — 2 M)
    (1) A consistent visual identity — the same logo, colour palette, typography, imagery style and button design applied on every page. (2) A consistent tone of voice and terminology in all copy, including microcopy, error messages and CTA labels, so that the brand reads as one coherent personality. *See* § 4.1.

14. **List any two differences between Mobile Web marketing and Mobile App marketing.** (SEE, Oct/Nov 2023 — 2 M)
    (1) Mobile web is accessed through a browser with no installation and therefore has broader reach, whereas an app requires download and installation and reaches a narrower but far more engaged audience. (2) Apps have full push notification and device-feature access — camera, GPS, biometrics — and can work offline, whereas mobile web has limited push capability and device access. *See* § 6.3.

15. **What is the impact of user behavior analysis on website optimization?** (SEE, Oct/Nov 2023 — 2 M)
    It shows what users actually do rather than what is assumed — identifying friction points, ignored content, invisible calls to action, rage clicks and true scroll depth — and generates the hypotheses that A/B testing then validates. Without it, optimisation is guesswork. *See* § 5.4.

## Part B — Eight- and Ten-Mark Questions

1. **Explain the concept of Web Design and the importance of website optimization.** (CIE-III, Jun 2026 — 10 M)
    Define web design covering layout, colour, typography, graphics, navigation and responsiveness. Then give the six importance points, the four types of optimization — technical, content, SEO, mobile — and the three benefits. *See* § 1.1 and § 1.4.

2. **A start-up company notices that visitors leave their website within a few seconds. As a web designer, explain how you would optimize the website to improve user engagement and conversion rate.** (CIE-III, Jun 2026 — 10 M)
    Give the eight numbered techniques — speed, responsive design, navigation, content quality, strong calls to action, SEO, bounce-rate reduction and metric monitoring — each with its concrete sub-actions. Strengthen the answer by opening with a diagnosis step (heatmaps and session recordings to find *why* they leave) and closing with A/B testing to validate the fixes. *See* § 1.5.

3. **A college plans to publish its departmental website for admissions and student activities. Explain the complete process involved in designing and publishing the website.** (CIE-III, Jun 2026 — 10 M)
    Give the nine official steps — requirement analysis, website design, content development, domain registration, web hosting, website development, testing, publishing, maintenance — expanded with the practitioner detail, including the pre-launch technical setup. *See* Chapter 2.

4. **Discuss what website visitors typically look for when they land on a business webpage. Suggest effective design and content strategies to meet those expectations.** (Improvement CIE, 4 Jun 2025 — 10 M)
    Use the ten visitor questions with the paired delivery strategy for each, then add the design principles and the copy principles as the systematic response. *See* § 3.4, § 4.1 and § 4.5.

5. **Design a user-centered website layout for a new e-commerce startup targeting young urban professionals. How would you ensure optimal user experience and engagement? Include key design principles, optimization strategies, and website copy suggestions.** (Improvement CIE, 4 Jun 2025 — 10 M)
    *Research first:* persona — 25 to 35, urban, mobile-first, time-poor, price-aware but convenience-driven; primary task — find and buy quickly on a phone during a commute. *Layout:* sticky header with search and cart; a hero section with one benefit headline and one call to action; a three-column category grid; a social-proof band with ratings; a personalised "recommended for you" row; a simple footer with trust and policy links. *Key design principles applied:* mobile-first responsive layout; visual hierarchy placing the search bar and primary CTA highest; simplicity with generous whitespace; consistency in button style and colour; one accent colour reserved for actions; 16-pixel or larger type; tap targets of at least 44 pixels; accessibility through ALT text and contrast. *Optimization strategies:* compressed modern-format images and lazy loading for a sub-three-second load; one-page guest checkout with a four-field form and saved payment;

a progress indicator in checkout; an exit-intent offer; heatmaps and session recordings to locate friction; A/B tests on the hero headline and CTA. *Copy suggestions:* headline "Everything for your week, delivered by tomorrow"; sub-line "Free delivery over Rs. 499. Returns in one tap."; CTA "Shop today's deals" rather than "Submit"; microcopy under the form reading "Takes 30 seconds — no account needed"; benefit-led product copy with specific claims. *Measurement:* conversion rate, checkout completion, mobile bounce rate and average order value. *See* Chapters 3, 4 and 5.

6. **A travel agency has created a landing page for a limited-time offer on holiday packages. Despite a high number of clicks on the ads leading to the landing page, the conversion rate is disappointingly low. Evaluate the possible reasons for the low conversion rate. Suggest optimizations for key elements such as headlines, call-to-action buttons, and visuals.** (Improvement CIE, 28 Aug 2024 — 10 M)

*Possible reasons:* poor message match — the advertisement promised something the page does not repeat; a vague headline that does not restate the offer; the offer and price are below the fold; too many competing calls to action, or none that is visually dominant; a long enquiry form demanding unnecessary details; no urgency despite the offer being time-limited; missing trust signals — no reviews, no certifications, no cancellation policy; slow page load, especially on mobile; generic stock imagery that does not show the actual destinations; hidden total cost or unclear inclusions; and navigation links that let visitors wander away from the page.

*Optimisations — headlines:* restate the exact advertisement promise with specifics, such as "Kerala backwaters, 4 nights from Rs. 18,999 — book by Sunday", and add a sub-headline listing what is included. *CTA buttons:* one dominant, high-contrast accent-coloured button repeated above and below the fold, with active benefit copy such as "Reserve my package" instead of "Submit", plus reassurance microcopy ("Free cancellation up to 7 days"). *Visuals:* replace stock photography with real destination and customer photographs, add a short itinerary video, and show a countdown timer for the deadline. *Additional:* cut the form to name, phone and travel date; add testimonials and ratings adjacent to the CTA; remove the site navigation from the landing page; compress images for a sub-three-second mobile load; and A/B test the headline and CTA. *Measurement:* conversion rate, form-start to form-completion ratio, scroll depth, and session recordings to verify the fix. *See* § 3.4, § 4.5 and § 5.3.

7. **How do online applications serve as effective tools for mobile marketing? What are the key features that businesses should incorporate into their apps to ensure they are maximizing marketing potential?** (Improvement CIE, 28 Aug 2024 — 10 M)

The eight reasons apps are effective, the four business models, the three app-creation rules, and the eleven-feature checklist. *See* Chapter 8.

8. **A luxury cosmetics brand is planning to launch a flash sale exclusively through mobile devices. How would you design a mobile marketing campaign that not only drives awareness of the sale but also maximizes conversion rates during the limited time?** (Improvement CIE, 28 Aug 2024 — 10 M)

*Pre-launch (awareness, seven days out):* teaser push notifications and SMS to the segmented installed base; Reels and short-video influencer previews; an in-app countdown banner; a "notify me" opt-in that captures intent and grants push permission; paid social and mobile display retargeting to past purchasers and lookalikes. *Launch (conversion window):* a timed push notification at each segment's peak activity hour, deep-linked straight to the sale screen; app-exclusive early access one hour before the website, to drive installs; a visible countdown timer on the sale screen; personalised product rows based on browsing and purchase history;

limited-stock indicators to create scarcity; one-tap checkout with saved cards and wallet support. *During (maximising conversion):* an abandoned-cart push within 20 minutes; geo-fenced offers near flagship stores with click-to-map; live chat support in-app; free-shipping threshold prompts to raise average order value. *Post-launch:* thank-you and review-request push; a win-back offer to browsers who did not buy; and a wallet pass for the next drop. *Technical requirements:* sub-three-second load, server capacity for the traffic spike, and a fully responsive mobile-first design. *Measurement:* push open rate, sale-screen sessions, add-to-cart rate, checkout completion, conversion rate, average order value, revenue per push, opt-out rate, and app installs during the window. *See* Chapters 7 and 8.

9. **Assume you are launching a promotional campaign for a new product using mobile marketing. Prepare a detailed plan including mobile advertising channels, push notifications, app-based promotions, and integration with social media.** (Improvement CIE, 4 Jun 2025 — 10 M)

   *Objectives and audience:* define a SMART objective and the mobile persona, including device, active hours and preferred platforms. *Mobile advertising channels:* mobile search advertisements on high-intent queries with location extensions; in-app banner and native advertisements on relevant apps; rewarded video for reach; interstitials at natural app breakpoints; click-to-call advertisements for enquiry-driven products; click-to-map advertisements to drive footfall; and expandable rich-media advertisements for the brand story. *Push notifications:* a sequenced plan — teaser, launch, reminder, last chance — each segmented, deep-linked, frequency-capped and A/B tested, with permission requested only after the user has experienced value. *App-based promotions:* app-exclusive early access and pricing, in-app coupons, gamified spin-to-win, loyalty points, referral codes, wallet passes, and one-tap checkout. *Social media integration:* Reels and Stories with the campaign hashtag; influencer seeding; shoppable posts and product tags; a messaging broadcast for order updates and offers; user-generated content contests; and retargeting audiences built from app and site events. *Cross-channel integration:* QR codes on packaging and print linking to the mobile landing page; consistent creative and offer across all touchpoints; "think mobile first", with mobile as the connective tissue between all media. *Measurement:* installs and cost per install, push open rate, in-app conversion rate, coupon redemption, return on advertising spend, and lifetime value by acquisition source. *See* Chapters 6, 7 and 8.

10. **Discuss the relationship between design principles and website copy. How can visual design elements and well-crafted content work together to enhance user experience and achieve website objectives? Include examples of effective design and copy integration.** (Improvement CIE, 28 Aug 2024 — 10 M)

    The principle-by-principle table, followed by the worked examples of successful integration — hero section, pricing table, testimonial block — and of failure: a beautiful layout with vague copy, or strong copy set in unreadable type. *See* § 4.6.

11. **What is the role of user Interface and user Experience designs in web design for marketing? How can businesses ensure a positive user Journey on their websites?** (SEE, Oct/Nov 2023, Q7a — 8 M)

    The UI and UX comparison table and the eight ways to ensure a positive user journey. *See* § 1.2.

12. **Describe the importance of testing and optimization in web design for Marketing. What tools and methods can be used to analyze and improve Website performance?** (SEE, Oct/Nov 2023, Q7b — 8 M)

The case for testing and the method-and-tool table. *See* § 1.7.

13. **Discuss briefly on Push Notification in Mobile Marketing. Explain how can businesses use them to engage and retain Mobile App users? Provide examples of effective push notification strategies.** (SEE, Oct/Nov 2023, Q8a — 8 M)
The definition, the seven engagement and retention uses, and the eight effective strategies — with examples such as a 20-minute abandoned-cart reminder, a geo-fenced coupon on store approach, and a 30-day win-back message. *See* § 7.1.

14. **Explain the significance of mobile analytics in mobile marketing campaigns. What key metrics should marketers track to measure the success of their mobile strategies?** (SEE, Oct/Nov 2023, Q8b — 8 M)
The significance argument and the seven metric groups, from acquisition through to technical health. *See* § 8.6.

15. **Evaluate the effectiveness of mobile marketing in facing market changes due to rapid technological advancements.** (SEE, Jun/Jul 2025, Q8a — 8 M)
*Where mobile marketing is effective:* it is inherently adaptive because it is digital and measurable — campaigns can be tested and adjusted continuously; it reaches consumers wherever they are, at any hour; it spans the entire funnel from discovery to purchase; it costs less than traditional advertising; it produces first-party behavioural data that survives the loss of third-party cookies; and it enables geo-targeting, personalisation and instant response that no traditional channel can match.
*Where it is strained by technological change:* platform fragmentation across devices, screen sizes and operating systems makes a single campaign difficult; privacy shifts — app tracking transparency, cookie deprecation, GDPR and do-not-disturb regulation — have degraded attribution and targeting; ad fatigue and rising uninstall rates limit push frequency; and the pace of format change forces continual re-skilling.
*Evaluation:* mobile marketing remains the most resilient channel precisely because its measurability lets it adapt faster than the disruption — but only for organisations that build an owned first-party asset, namely an app and a permission-based list, rather than renting reach from platforms. *See* § 6.4, § 6.5 and § 6.6.

16. **Create a strategy to use new digital channels like mobile apps, chatbots, and social media integration to strengthen a brand's global online presence.** (SEE, Jun/Jul 2025, Q8b — 8 M)
*Mobile app as the owned hub:* a single global app with localised content, currency and language; personalised home screens; push notification consent captured after first value; loyalty and wallet integration; offline access; and full event instrumentation feeding a global analytics view.
*Chatbots as the always-on layer:* deployed on the website, in the app and on messaging platforms; handling FAQs, order tracking, returns and product discovery in multiple languages across all time zones; escalating to human agents with full context; and capturing conversational data that feeds product and content decisions.
*Social media integration:* a hub-and-spoke model with a global brand account and regional handles; platform-native content rather than cross-posting; shoppable posts and product tags linking back to the app; regional influencer partnerships for cultural credibility; and social listening for share of voice and sentiment by market.
*Cross-channel integration:* one customer profile unified across app, chat, social, e-mail and web, so that the conversation continues seamlessly — the omnichannel synchronisation principle of Volume 2 § 1.3.

*Governance:* a central brand system with regional flexibility; consistent visual identity and tone; and compliance with local privacy and messaging regulation.
*Measurement:* a global dashboard tracking reach, engagement, app installs and retention, chatbot resolution rate, cross-channel conversion and lifetime value by market. *See* Chapters 6 and 8.

## How Unit IV Is Examined

**THE PATTERN ACROSS PAPERS**

In the Semester End Examination, Unit IV is Questions 7 and 8 with internal choice — 16 marks in two eight-mark sub-divisions — plus two or three Part A objective questions. The third Continuous Internal Evaluation test and the Improvement CIE both draw heavily on it.

The highest-probability short question by a wide margin is the **mobile advertising against mobile marketing** distinction, which has appeared in three separate papers. The highest-probability ten-mark topics are the **website optimisation scenario** (visitors leaving within seconds), the **nine-step publishing process**, **what visitors look for** on a business page, the **design-and-copy relationship**, **push notifications**, and **online applications**.

Note that Unit IV questions are heavily scenario-based — a start-up, a college department, a travel agency, a cosmetics brand, an e-commerce startup. Answer them by naming the framework and then applying it to the specific business, not by discussing web design in general.

APPENDIX C

# Glossary of Key Terms

Table C.1. Key terms for rapid revision

| Term | One-line meaning |
|---|---|
| **Above the fold** | The area of a page visible without scrolling |
| **ASO** | App store optimisation — ranking an app in app store search |
| **Click-to-Call** | A mobile advertisement format with a tappable phone number; lifts click-through by 6–8% |
| **Click-to-Map** | A geo-targeted format that opens a map to the nearest store |
| **Core Web Vitals** | The page-experience metrics LCP, INP and CLS |
| **CPI / LTV** | Cost per install / customer lifetime value |
| **DAU / MAU** | Daily and monthly active users; their ratio is "stickiness" |
| **Domain registration** | Buying the site's address |
| **Geo-fencing** | Triggering an action when a user enters a defined geographic boundary |
| **Geo-targeting** | Delivering content or offers based on the user's geographic location |
| **Happy talk** | Empty welcome text that says nothing; should be deleted |
| **Interstitial** | A full-screen advertisement displayed within an app |
| **Krug's first law** | "Don't make me think" — the interface must be self-evident |
| **M-commerce** | Commercial transactions conducted through a wireless internet-enabled device |
| **Mobile advertising** | The paid promotional subset of mobile marketing |
| **Mobile marketing** | A multi-channel strategy reaching users on mobile devices |
| **Push notification** | A short message sent by an app to the device screen, even when the app is closed |
| **Responsive design** | One layout that adapts fluidly to mobile, tablet and desktop |
| **Satisficing** | Choosing the first option that plausibly works rather than the best one |
| **UI / UX** | The visual interactive surface / the whole quality of the user's journey |
| **User-centred design** | Design driven by explicit user understanding and validated iteratively by user testing |
| **Visual hierarchy** | Making important elements visually prominent in proportion to their importance |
| **Web design** | Creating visually appealing, user-friendly websites — layout, colour, typography, graphics, navigation, responsiveness |
| **Web hosting** | Renting the server that stores the site's files |

| Term | One-line meaning |
|---|---|
| **Website copy** | The written content of a page — headlines, body, microcopy, CTA text |
| **Website optimization** | Improving website performance, speed, usability and search visibility to increase traffic and conversions |

APPENDIX D

# Framework Quick-Reference Sheet

Everything in this volume that is a numbered list, in one place, for the night before the examination.

Table D.1. Framework quick reference

| Framework | The sequence |
|---|---|
| **Web design defined** | Layout, colour, typography, graphics, navigation, responsiveness |
| **UI against UX** | Definition, scope, deliverables, marketing role, failure symptom |
| **Positive user journey (eight actions)** | Map the journey, shallow navigation, obvious primary action, fewest steps, feedback, error and empty states, speed, test with real users |
| **Basic pages** | Home, about, product and service, landing, blog, contact, trust |
| **Website optimization — importance** | Speed, experience, ranking, bounce, conversion, mobile compatibility |
| **Four types of optimization** | Technical, content, SEO, mobile |
| **Eight optimisation techniques** | Speed → responsive design → navigation → content quality → strong CTAs → SEO → bounce reduction → metric monitoring |
| **Image optimization — four gains** | Speed, mobile experience, SEO, accessibility |
| **Testing methods** | A/B, usability, heatmaps, recordings, funnel analysis, performance, cross-device, accessibility, crawl |
| **Nine publishing steps** | Requirement analysis → design → content → domain → hosting → development → testing → publishing → maintenance |
| **UCD — seven principles** | Explicit user understanding, continuous involvement, evaluation-driven, iterative, whole experience, multidisciplinary, accessible |
| **UCD process** | Understand context → specify requirements → produce solutions → evaluate → iterate |
| **Ten visitor questions** | Right place, what's in it for me, trust, cost, next step, findability, speed, mobile, human contact, safety |
| **Twelve design principles** | Simplicity, consistency, visual hierarchy, balance and alignment, contrast, whitespace, typography, colour, responsiveness, accessibility, navigation clarity, speed |
| **Seven usability attributes** | Useful, learnable, memorable, effective, efficient, desirable, delightful |

| Framework | The sequence |
|---|---|
| **Billboard design rules** | Visual hierarchy, omit needless words, obvious clickables, breadcrumbs and street signs |
| **Copy principles** | Benefit-led, scannable, front-loaded, customer's language, specific, active, concise, one idea per section, explicit CTA, objections answered in place |
| **Design serving copy** | Hierarchy, typography, whitespace, contrast, consistency, imagery, responsiveness |
| **Four metrics to name** | Traffic, bounce rate, conversion rate, average session duration |
| **Data to decision** | Observe → segment → diagnose → hypothesise → test → decide → re-measure |
| **Mobile advertising against marketing** | Scope, nature, channels, objective, duration, interaction, measurement — advertising is the paid subset |
| **Mobile web against app** | Access, reach, discoverability, engagement depth, push, offline, device features, cost |
| **Five mobile limitations** | Platform diversity, privacy, small-screen navigation, ad fatigue, regulation |
| **Seven campaign characteristics** | Mobile first, multi-screen, full spectrum, integrate with traditional, work across screens, whole funnel, test your way |
| **Push uses** | Immediacy, urgency, personalisation, cart recovery, geo-triggered, re-engagement, loyalty |
| **Eight push strategies** | Segment, time correctly, cap frequency, one benefit with a verb, rich media, deep-link, ask after value, A/B test and watch opt-out |
| **Ten promotion techniques** | SMS, coupons, in-app exclusives, push flash sales, location offers, QR codes, gamification, wallet passes, referrals, early access |
| **Mobile ad formats** | Click-to-call, interstitial, click-to-map, canvas and expandable, mobile search, in-app banner and native, rewarded video |
| **Eight reasons apps work** | Permanent presence, push access, behavioural data, higher engagement, loyalty, device capability, offline, frictionless repurchase |
| **Three app rules** | Solve a problem, get inside the user's mind, design with the end in mind |
| **Seven mobile metric groups** | Acquisition, activation, engagement, retention, monetisation, notification performance, technical |
