Human Resource Management

Arjun V. Singar
Assistant Professor
Industrial Engineering & Management
RVCE, Bangalore

Introduction

Definitions

- The art of hiring, motivating, developing and maintaining competent workforce to achieve the goals of an organization.
- HRM is the process of acquiring, training, appraising & compensating employees and attending to their labor relation, health & safety and fairness concerns.

What does HRM do?

- Bridges the gap between employee expectations and organizational requirements by adopting appropriate human resource strategies and practices.
- Recognizes, rewards and nurtures talent at all levels.
- Provides a healthy work climate in order to get the best out of people.

Scope of HRM

- **Personnel Aspect:** Concerned with manpower planning, recruitment, selection & placement.
- **Welfare Aspect:** Deals with working conditions and amenities.
- **Industrial Relations Aspect:** Covers union management relations, joint consultations, bargaining, grievance and disciplinary procedures.

Scope of HRM

Section I – Nature of HRM

- Nature of HRM
- Environment of HRM
- Strategic HRM

Section II – Employee Hiring

- HRP, Job Analysis & Design
- Employee Hiring
- Orientation & Placement

Section III – Remuneration

- Training & Development
- Appraisal & Remuneration
- Incentives & Benefits

Section IV - Motivation

- Motivation
- Participative Management
- Employee Communication

Section V - Maintenance

- Employee Welfare
- Safety & Health
- Promotions & Transfers

Section VI - Relations

- Industrial Relations
- Trade Unions
- Disputes & Resolution

Section VII – Prospects of HRM

- Ethical Issues
- HR Audit
- Challenges of HRM

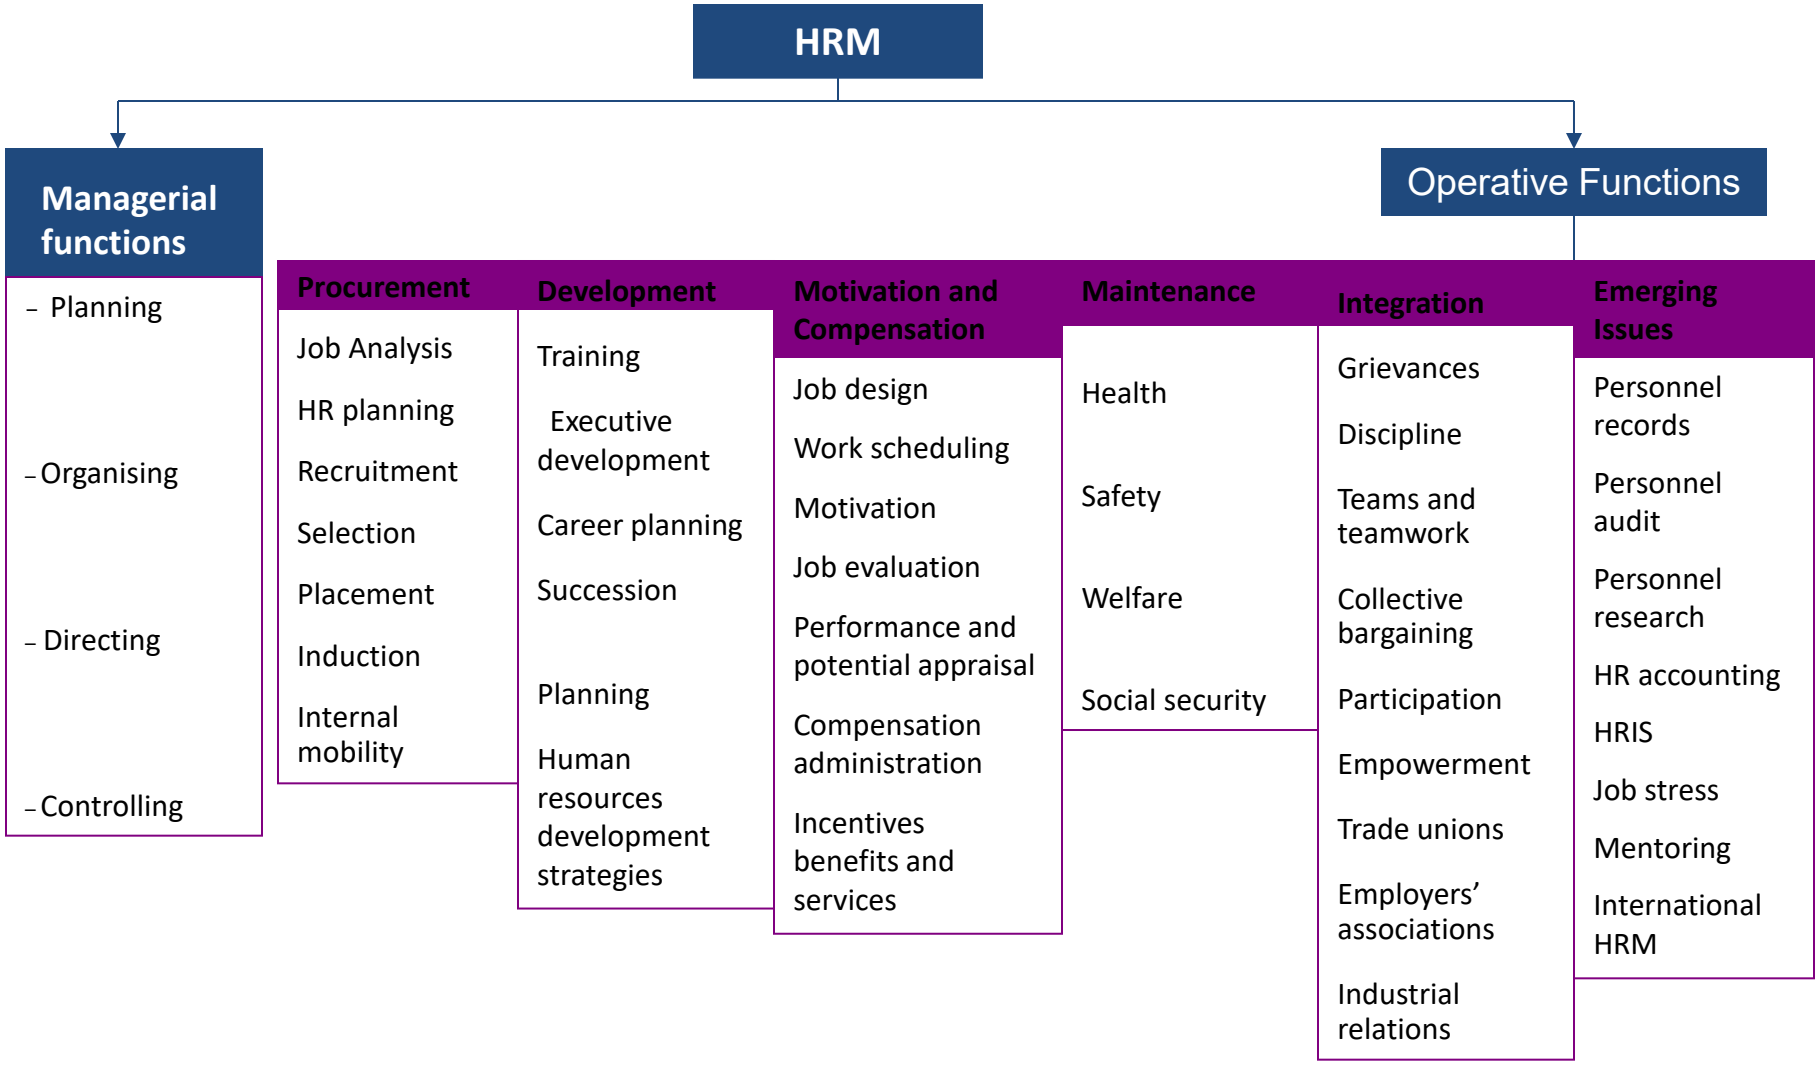

Evolution of HRM

Period	Development Status	Emphasis	Status
1920 - 1940	Beginning	Statutory, Welfare	Clerical
1940 - 1960	Struggling for Recognition	Introduction of Techniques	Administrative
1960 - 1980	Achieving Sophistication	Regulatory, Conforming, Imposition of Standards	Managerial
1980 - TD	Promising	Human Values, Productivity through People	Executive

Evolution of HRM

- **The Commodity Concept:** Labor was regarded as a commodity to be bought and sold. Wages were based on demand and supply. Government did very little to protect workers.
- **The Factor of Production Concept:** Labor is like any other factor of production, money, materials, land, etc. Workers are like machine tools.
- **The Goodwill Concept:** Welfare measures like safety, first aid, lunch room, rest room will have a positive impact on workers' productivity.
- **The Paternalistic Concept/Paternalism:** Management must assume a fatherly and protective attitude towards employees. Paternalism does not mean merely providing benefits but it means satisfying various needs of the employees as parents meet the requirements of the children.

- **The Humanitarian concept:** To improve productivity, physical, social and psychological needs of workers must be met. As Mayo and others stated, money is less a factor in determining output, than group standards, group incentives and security. The organization is a social system that has both economic and social dimensions.
- **The Human Resource Concept:** Employees are the most valuable assets of an organization. There should be a conscious effort to realize organizational goals by satisfying needs and aspirations of employees.
- **The Emerging Concept:** Employees should be accepted as partners in the progress of a company. They should have a feeling that the organization is their own. To this end, managers must offer better quality of working life and offer opportunities to people to exploit their potential fully. The focus should be on Human Resource Development.

HRM

Difference between Personnel Management & HRM

Dimension	PM	HRM
Employee Contract	Careful delineation of contracts	Aim to go beyond contract
Guide to management action	Procedures	Business need
Behavior referent	Norms	Values
Managerial task	Monitoring	Nurturing
Key relations	Labor management	Customers
Speed of decision	Slow	Fast
Management role	Transactional	Transformational

Difference between Personnel Management & HRM

Dimension	PM	HRM
Communication	Negotiation	Facilitation
Selection	Separate	Integrated
Pay	Job evaluation	Performance related
Job design	Division of labor	Team work
Training & development	Controlled access to courses	Learning companies
Focus of attention for interventions	Personnel procedures	Cultural, structural & personnel strategies
Respect for employees	Labor is treated as a tool	People are treated as assets

General Objectives of HRM

- To help the organization reach its goals.
- To employ the skills and abilities of the workforce efficiently.
- To provide the organization with well trained and well motivated employees.
- To increase to the fullest the employee's job satisfaction and self actualization.
- To develop and maintain a quality of work life.
- To communicate HR policies to all employees.

Specific Objectives of HRM

- **Societal Objective:** To be ethically and socially responsible to the needs and challenges of the society.
- **Organizational Objective:** To recognize the role of HRM in bringing about organizational effectiveness.
- **Functional Objective:** To maintain the department's contribution at a level appropriate to the organizational needs.
- **Personal Objective:** To assist employees in achieving their personal goals, at least insofar as these goals enhance the individual's contribution to the organization.

Functions of HRM

- **Planning:** Objectives, strategies, policies & leadership.
- **Staffing:** Human resource planning, job analysis, recruitment & selection.
- **Developing:** Key skills and competencies.
- **Monitoring:** Reward systems, performance appraisals, pay & benefits.
- **Maintaining:** Workplace safety, health & welfare policies.
- **Managing relationships:** Unity, involvement & integrity.
- **Managing Change:** Reorganizing people & reallocating resources.
- **Evaluating:** Designing procedures, processes & innovative HR practices.

HRM Objectives & Functions

HRM Objectives	Supporting Functions
Societal Objectives	• Legal compliance • Benefits • Union management relations
Organizational Objectives	• Human resource planning • Employee relations • Selection • Training & development • Appraisal • Placement • Assessment
Functional Objectives	• Appraisal • Placement • Assessment
Personal Objectives	• Training & development • Appraisal • Placement • Compensation • Assessment

Importance of HRM

- *attract* and retain talent
- *train* people for challenging roles
- *develop* skills and competencies
- *promote* team spirit
- *develop* loyalty and commitment
- *increase* productivity and profits
- *improve* job satisfaction
- *enhance* standard of living
- *generate* employment opportunities

Features of HRM

- Pervasive force
- Action oriented
- Individually oriented
- People oriented
- Future oriented
- Development oriented
- Integrating mechanism
- Comprehensive function
- Auxiliary service
- Inter-disciplinary function
- Continuous function

Policies

- Personnel policies are plans of action.
- Organizations need to evolve HR policies as they ensure consistency and uniformity in treating people.
- They serve as roadmaps for managers on a number of issues such as recruitment, selection and promotion.
- They also help motivate people and build loyalty.
- A good personnel policy should be easy to understand based on the facts which are equitable, reasonably flexible, precise and should be related to the objectives.
- Policies, in turn, become benchmarks to compare and evaluate performance.

Types of Policies

- Originated Policies
- Specific Policies
- Appealed Policies
- General Policies
- Imposed Policies
- Written Policies

Policies - Specifics

- Policy of hiring people with due respect to factors like reservation & sex - **Originated**
- Policy on terms & conditions of employment: compensation policy, hours of work, overtime, promotion, transfer, lay off - **Specific**
- Policy with regard to medical assistance: sickness & company medical benefits - **Appealed**
- Policy regarding housing, transport and allowances - **General**
- Policy regarding training & development: need for, methods of and frequency of training - **Imposed**
- Policy regarding industrial relations: union recognition, grievance procedure & participative management - **Written**

Formulating Policies

- Past practice in the organization
- Prevailing practice in rival companies
- Attitudes and philosophy of management
- Knowledge and experience gained

HRM & Its Environment for Corporate Excellence

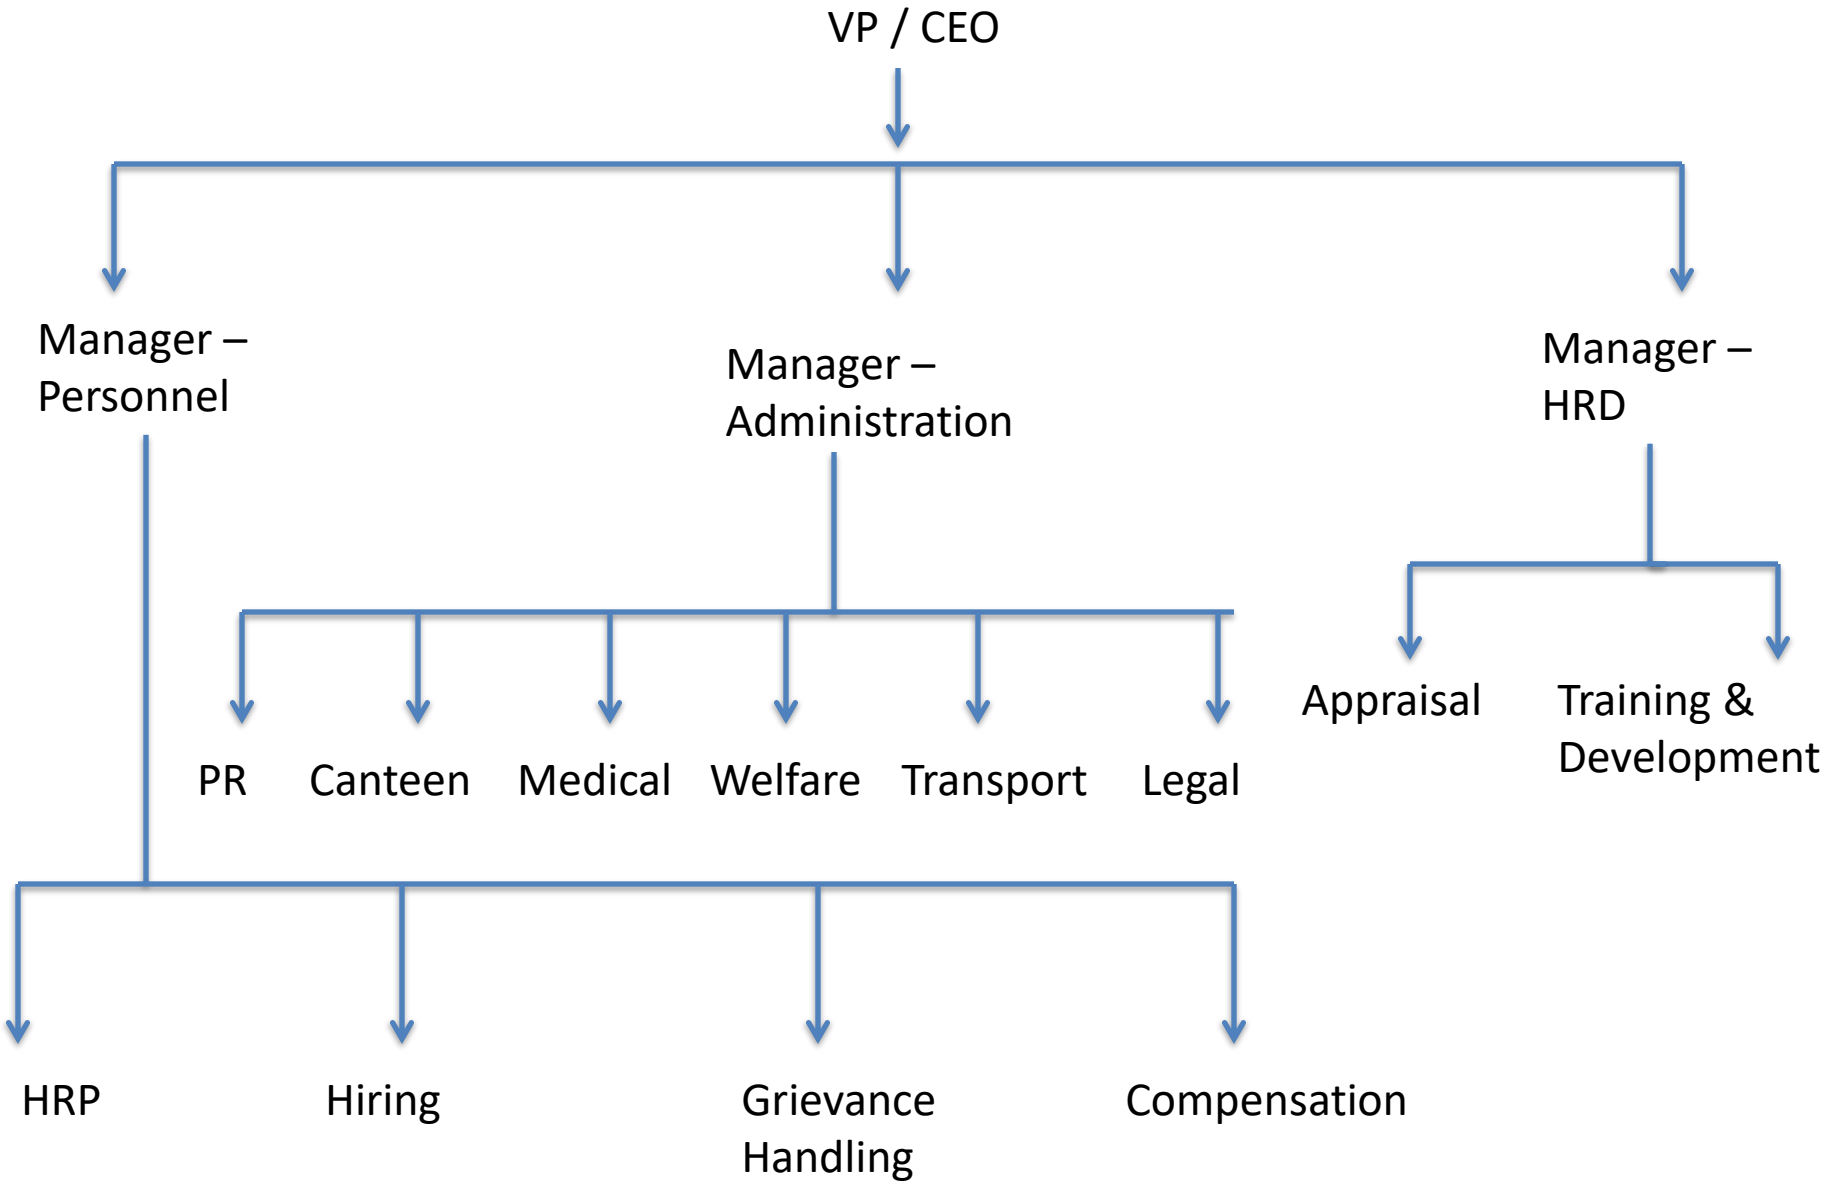

External

- Legal
- Economic
- Technological
- Cultural

Internal

- Professional Bodies
- Organization Culture & Conflict
- Strategy, Task & Leadership
- Unions

HRM – Organizational Structure

Man Power Planning

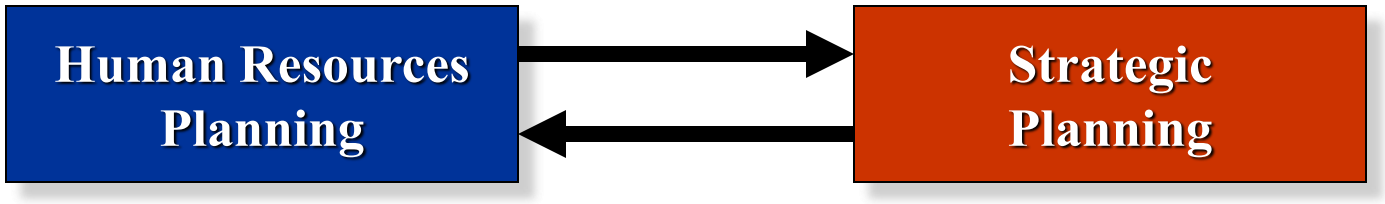

- **Definition:** Human Resource Planning (HRP) / Man Power Planning is the process of forecasting a firm's future demand for, and supply of, the right type of people in the right number.
- **Objective:** The basic purpose of HRP is to decide what positions the organization will have to fill and how to fill them.
- **Nature:** HRP offers an accurate estimate of the number of employees required with matching skill requirements to meet organizational objectives.

The Need for HRP

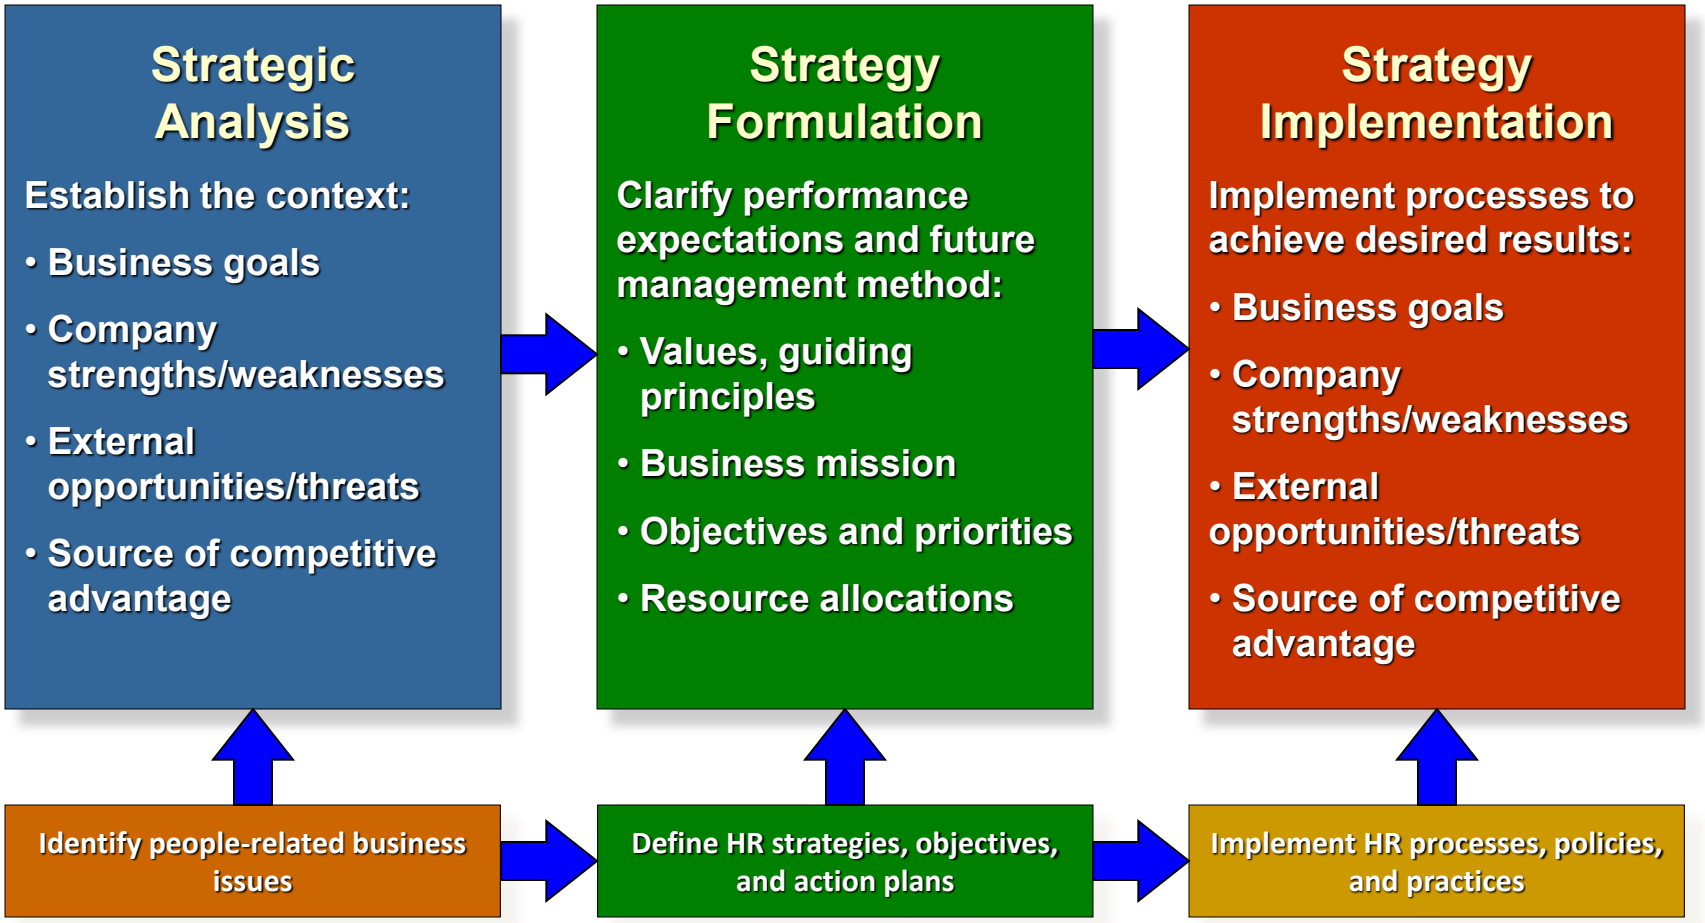

- **External Challenges:** Liberalization, privatization and globalization (LPG era) have created huge demand for people in IT, finance, marketing, and manufacturing fields.
- **Organizational Decisions:** Decisions such as expansion, diversification and relocation leading to demand for people possessing requisite skills.
- **Workforce Factors:** Such as retirement, resignation and termination etc. creating manpower gaps.

HRP & Strategic Planning

- Strategic Analysis
  - What human resources are needed and what are available?
- Strategic Formulation
  - What is required and necessary in support of human resources?
- Strategic Implementation
  - How will the human resources be allocated?

HRP & Strategic Planning

Human Capital Architecture

- Core knowledge workers
  - Employees who have firm-specific skills that are directly linked to the company's strategy.
    - Example: Senior software programmer
- Traditional job-based employees
  - Employees with skills to perform a predefined job that are quite valuable to a company, but not unique.
    - Example: Security guard
- Contract labor
  - Employees whose skills are of less strategic value and generally available to all firms.
    - Example: General electrician
- Alliance/partners
  - Individuals and groups with unique skills, but those skills are not directly related to a company's core strategy.
    - Example: Independent product label designer

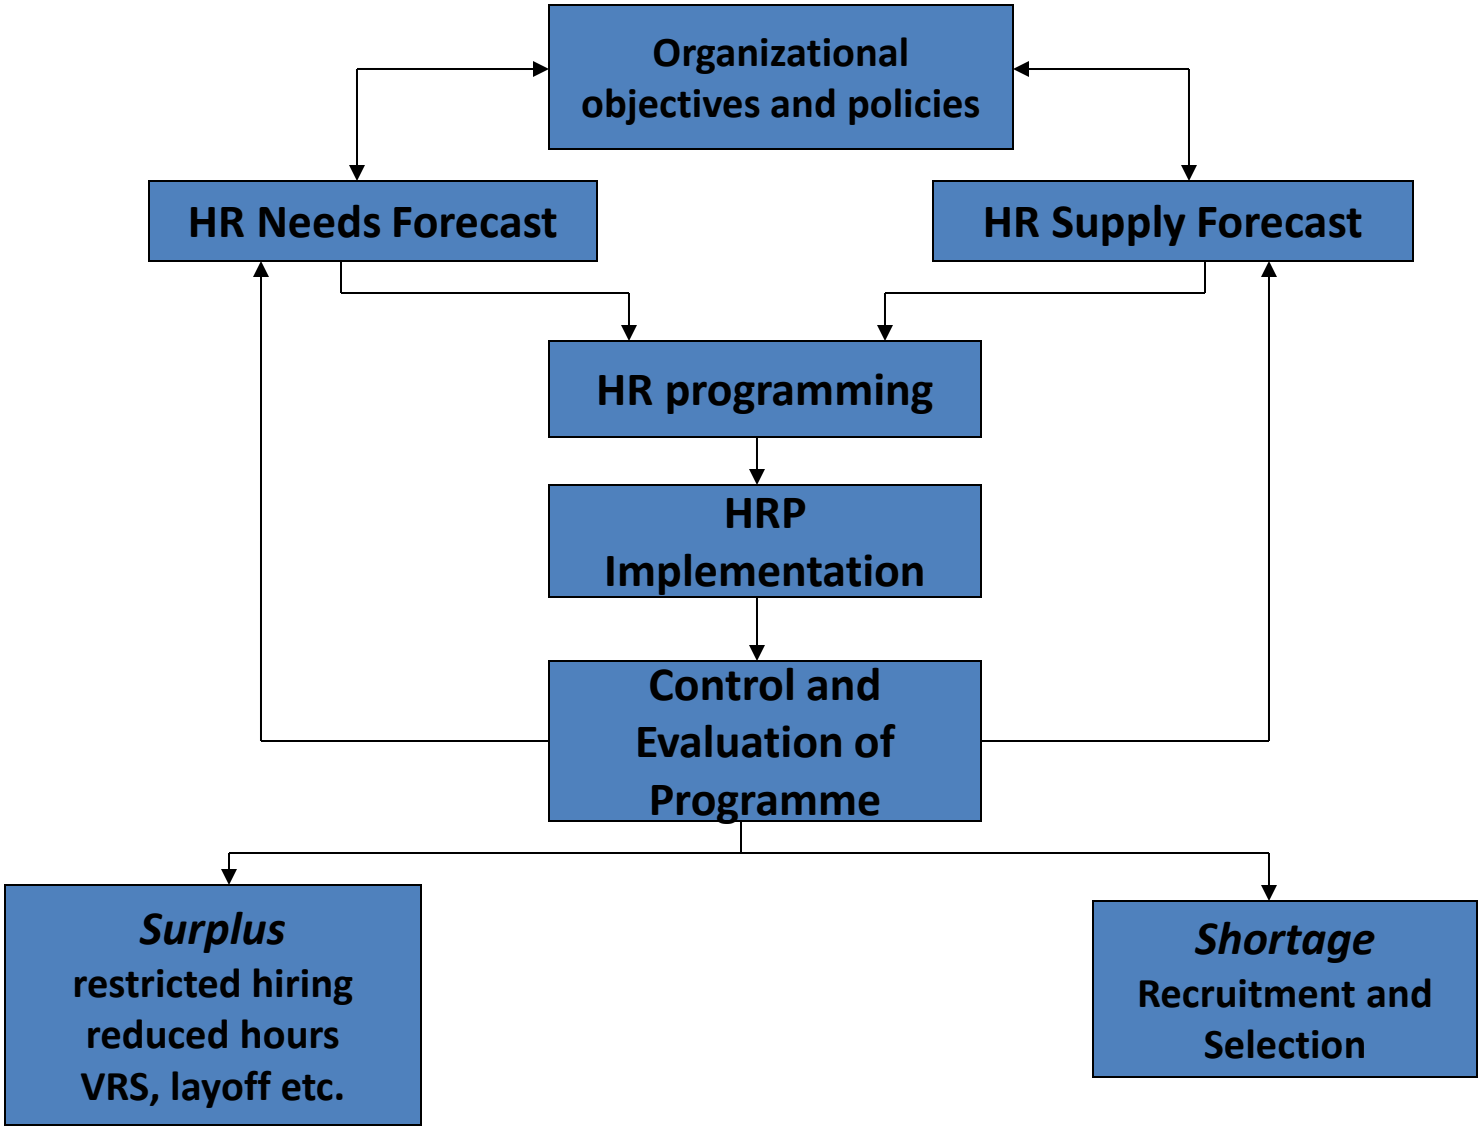

Importance – Uses & Benefits of HRP

- Future Personnel Needs
- Part of Strategic Planning
- Creating Highly Talented Personnel
- International Strategies
- Foundation for Personnel Functions
- Increasing Investments in Human Resources
- Resistance to Change and Move
- Unite the Perspectives of Line and Staff Managers

Factors Affecting HRP

- Type and Strategy of Organization
- Organizational growth cycle and planning
- Environmental uncertainties
- Outsourcing
- Nature of jobs being filled
- Type and Quality of forecasting information
- Time horizons

The Process of HRP

Organizational Objectives and Policies

- HRP need to be based on organizational objectives.
- Specific requirements in terms of number and characteristics of employees should be derived from the organizational objectives.
- Once organizational objectives are specified, communicated and understood by all, the HR department must specify its objectives with regard to HR utilization in the organization.
- Questions like -- are vacancies filled from outside or through promotions within, do the T & D objectives interface with the HRP objectives, the unions constraints encountered in HRP and policies needed to handle these constraints, to enrich employee's job, downsize the organization to make it core competent, ensure continuous availability of adaptive and flexible work force.

HR Needs / Demand Forecast

- Is a process of estimating the future quantity and quality of people required
- Must consider both external factors and internal

Forecasting Techniques

Managerial Judgment

- Managers sit together, discuss and arrive at a figure which would be the future demand for labor.

Ratio – Trend Analysis

- The technique involves studying past ratios, between the number of workers & sales in an organization and forecasting future ratios, making some allowances for changes in the organization or its methods.

HR Needs / Demand Forecast

Forecasting Techniques

Regression Analysis

- This technique similar to ratio – trend but more statistically sophisticated.

Work Study Technique

- Can be used when it is possible to apply work measurement to calculate the length of operations and the amount of labor required.
- It can also be combined with ratio trend analysis to forecast for indirect workers, establishing the ratio between two categories.

HR Needs / Demand Forecast

Forecasting Techniques

Delphi Technique

- Is a method of forecasting personnel needs.
- It solicits estimates of personnel needs from a group of experts, usually managers.
- The HRP expert act as intermediaries, summarize the various responses and report the finding back to the experts.
- Summaries and surveys are repeated until the experts opinion begin to agree. And this agreement reached is the requirement of the HR personnel.

HR Needs / Demand Forecast

Forecasting Techniques

Flow Models

- Frequently associated with forecasting personnel needs. Simplest one being; Markov model in which the forecasters will:
- Determine the time that should be covered.
- Establish categories to which employees can be assigned.
- Count annual movements among categories which can be classified as absorbing (gains and losses to the company) and non-absorbing (change in position levels or employment status).
- Estimate the probability of transitions from one category to another based on past trends.

HR Needs / Demand Forecast

Examples

Ratio – Trend Analysis

2011-12	Production of Units	:	5,000
2011-12	No. of Workers	:	100
	Ratio	:	100:5000
2012-13	Estimated Production	:	8,000
	No. of Workers required	:	8000 × (100/5000) = 160

If supervisors have a span of 20 workers, 8 supervisors are also needed in 2003-04.

HR Needs / Demand Forecast

Examples

Work Study Technique

Planned output for the year	10,000 pieces
Standard hours per piece	3 hours
Planned hours required	30,000 hours
Productive hours per person per year	1,000 hours (estimated on annual basis)
(allowing for absenteeism, turnover, idle time etc.)	
No. of workers required	30
If span of control in the unit is 10 per officer, then 3 officers are also required.	

HR Supply Forecast

- Determines whether the HR department will be able to procure the required number of personnel.
- Specifically, supply forecast measures the number of people likely to be available from within and outside an organization.

Reasons for Supply Forecast

- Helps quantify number of people and positions expected to be available in future to help the organization realize its plans and there by meet its objectives.
- Helps clarify likely staff mixes that will exist in the future.
- Assess existing staffing levels in different parts of the organization.
- Prevents shortage of people where and when they are most needed.
- Monitors expected future compliance with legal requirements of job reservations.

Supply Forecast – Existing Human Resource

Present Employees

- Analysis of present employees is greatly facilitated by HR audits.
- They summarize each employee's skills and abilities.
- The audits of non managers are called skills inventories and those of management are called management inventories.

Supply Forecast – Existing Human Resource

Skills Inventories

- Personal data – age, sex
- Skills – job experience, training
- Salary and job history – present & past salary, pay raises
- Company data – benefit plan data, seniority
- Capacity of the individual – psychological & health scores
- Special preference – geographic location, type of job

Supply Forecast – Existing Human Resource

Skills Inventories – An Example

Name : A.K. Sen
Number : 429

Date printed : 1-4-2004
Department : 41

Key words

Word	Description	Activity
Accounting	Tax	Supervision and analysis
Book Keeping	Ledger	Supervision
Auditing	Computer records	Analysis

Work experience

From	To		
1998	2000	Tax clerk	ABC Company
2000	2002	Accountant	XYZ Co.
2002	2003	Chief Accounts Officer	TT Bank

Education

Degree	Major	Year
MBA	Finance	1998
B.Com	Accounts	1995

Special Qualifications

Course	Date
DBF	1996
Risk Management	1999

Supply Forecast – Existing Human Resource

Management Inventories

- Work history
- Strengths
- Weaknesses
- Promotion potential
- Career goals
- Personal data
- Number and types of employees
- Total budget managed
- Previous management duties

Supply Forecast – Internal Supply

- A manpower inventory in terms of the size and quality of personnel available (their age, sex, education, training, experience, job performance, etc.) is usually prepared by HR departments.

Several techniques are used while ascertaining the internal supply of manpower:

- Inflow and outflow
- Turnover rate
- Conditions of work and absenteeism
- Productivity level
- Movement among jobs

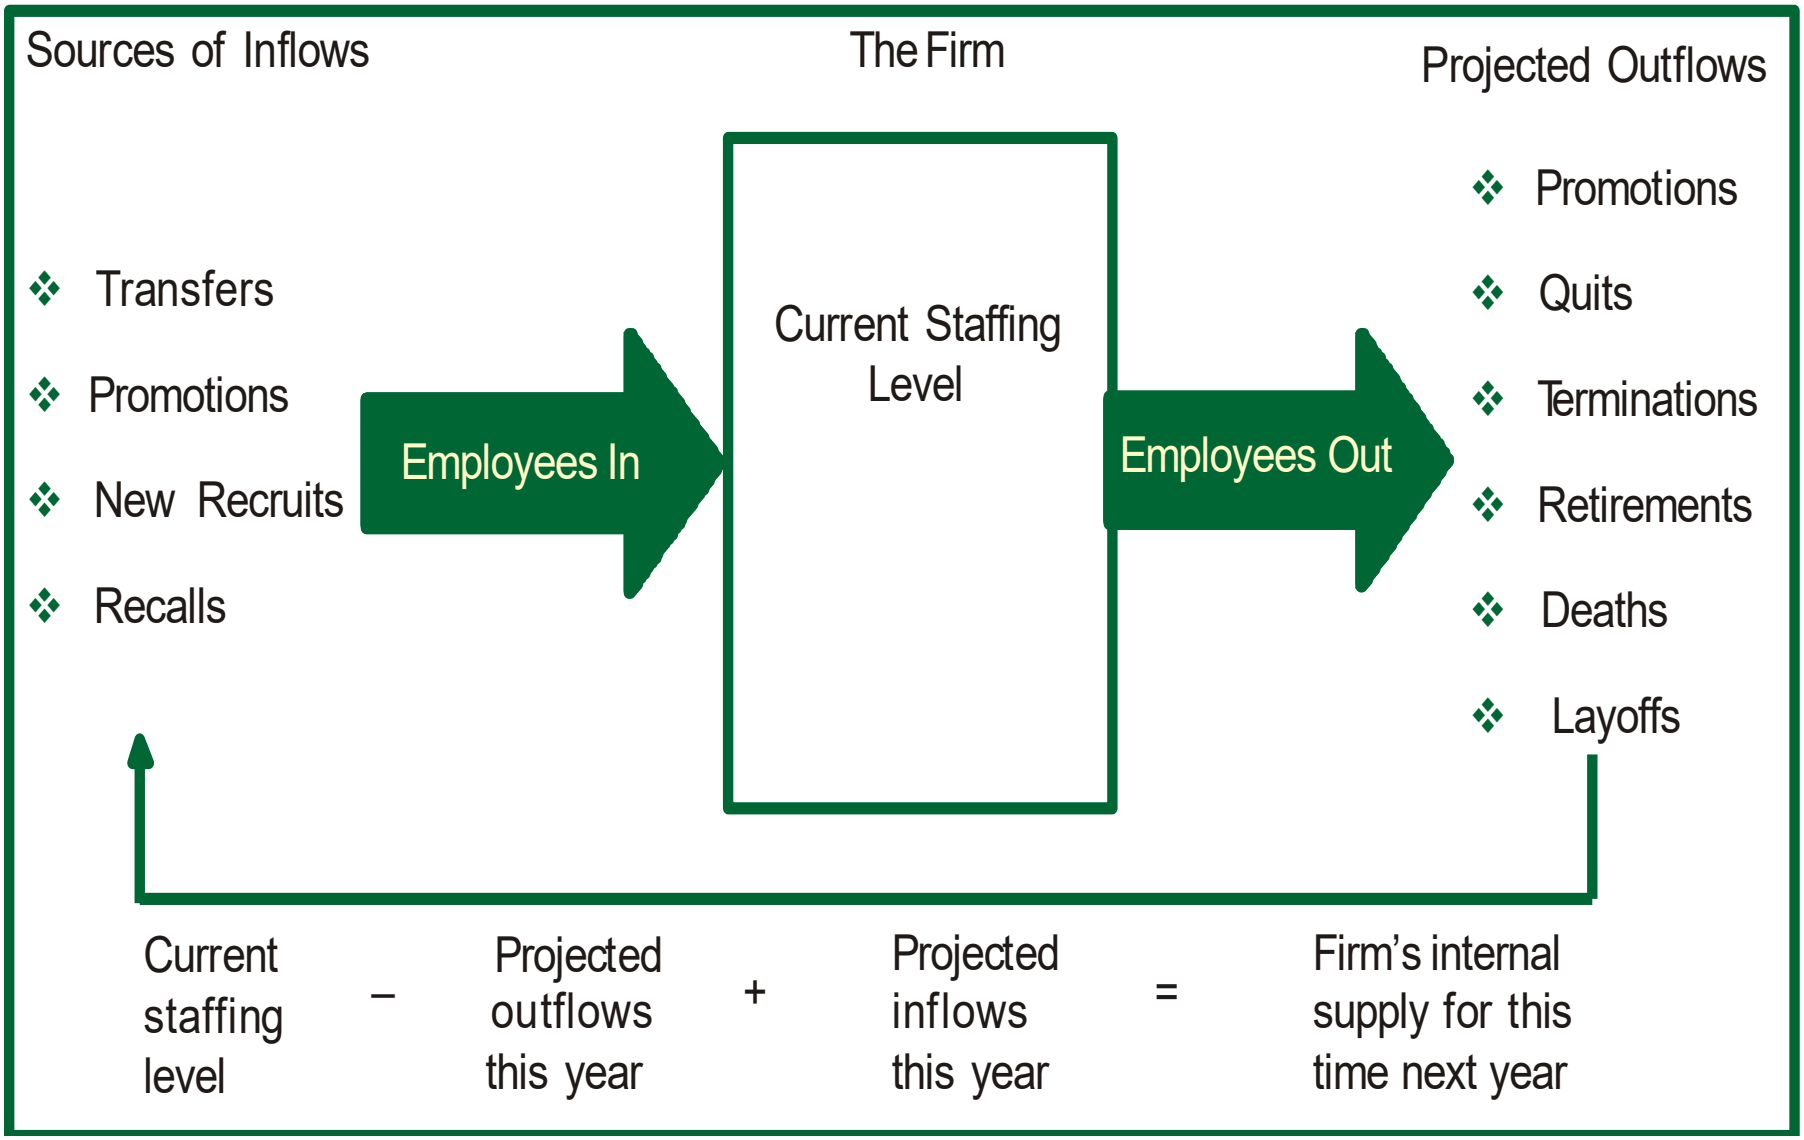

HR Needs / Demand Forecast

Markov Analysis for Inflow and Outflow - Example

2003-2004	Store Managers	Asst. Store Managers	Section Heads	Dept. Heds	Sales Executives	Exit
Store Managers (n = 15)	80% 12					20% 3
Asst. Store Managers (n = 36)	11% 4	83% 30				6% 2
Section Heads (n = 94)		11% 11	66% 63	8% 8		15% 14
Departmental Heads (n = 288)			10% 29	72% 207	2% 6	16% 46
Sales Executives (n = 1440)				6% 86	74% 1066	20% 288
Forecasted Supply	16	41	92	301	1072	353

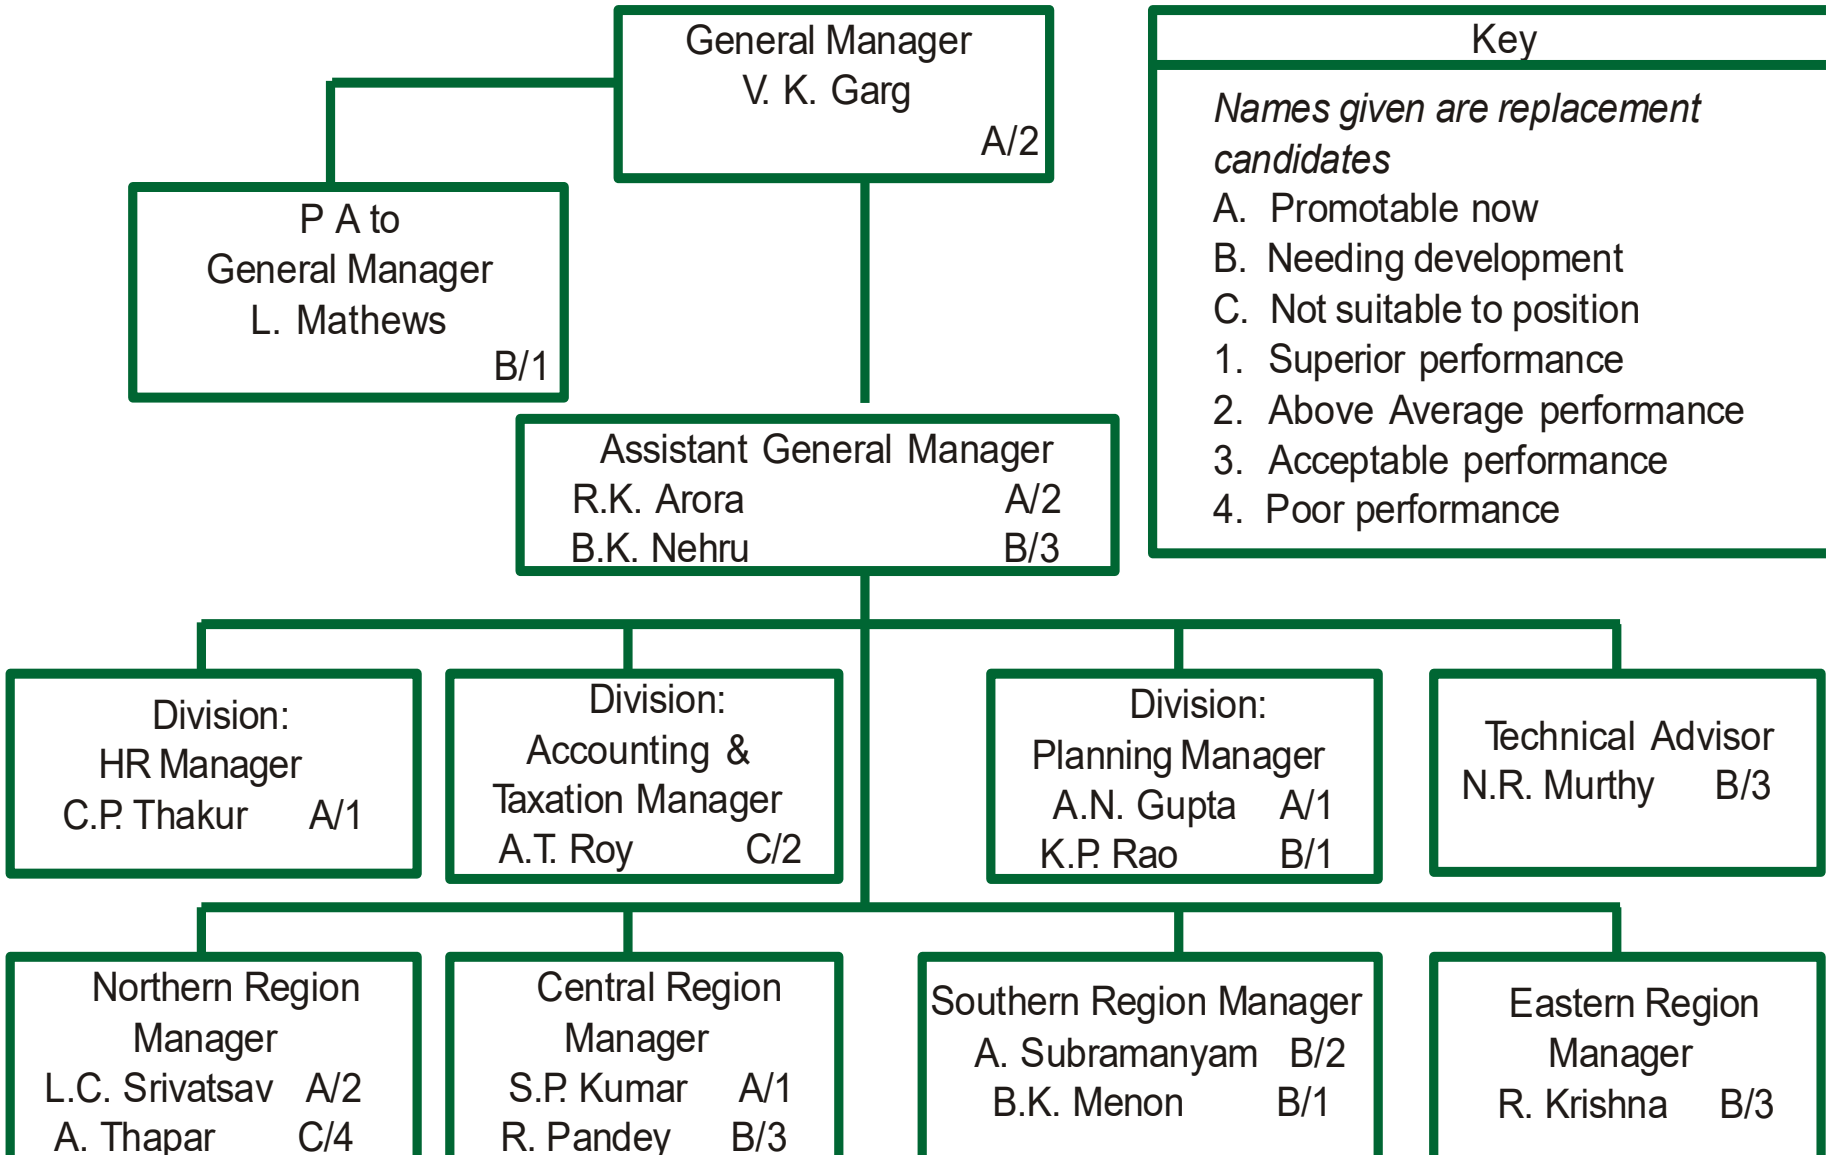

Figures in circles show the transition percentages

Supply Forecast – Internal Supply

Supply Forecast – Internal Supply

Replacement Chart

Supply Forecast – External Supply

- External hires need to be contacted when suitable internal replacements are not available.
- A growing number of firms are now using computerized human resource information systems to track the qualifications of hundreds or thousands of employees.
- HRIS can provide managers with a listing of candidates with required qualifications after scanning the data base.

External sources are important for specific reasons:

- New blood and new experience will be available
- Organization needs to replenish lost personnel
- Organizational growth and diversification create the needs to use external sources to obtain additional number and type of employees.

Man Power Gap Analysis

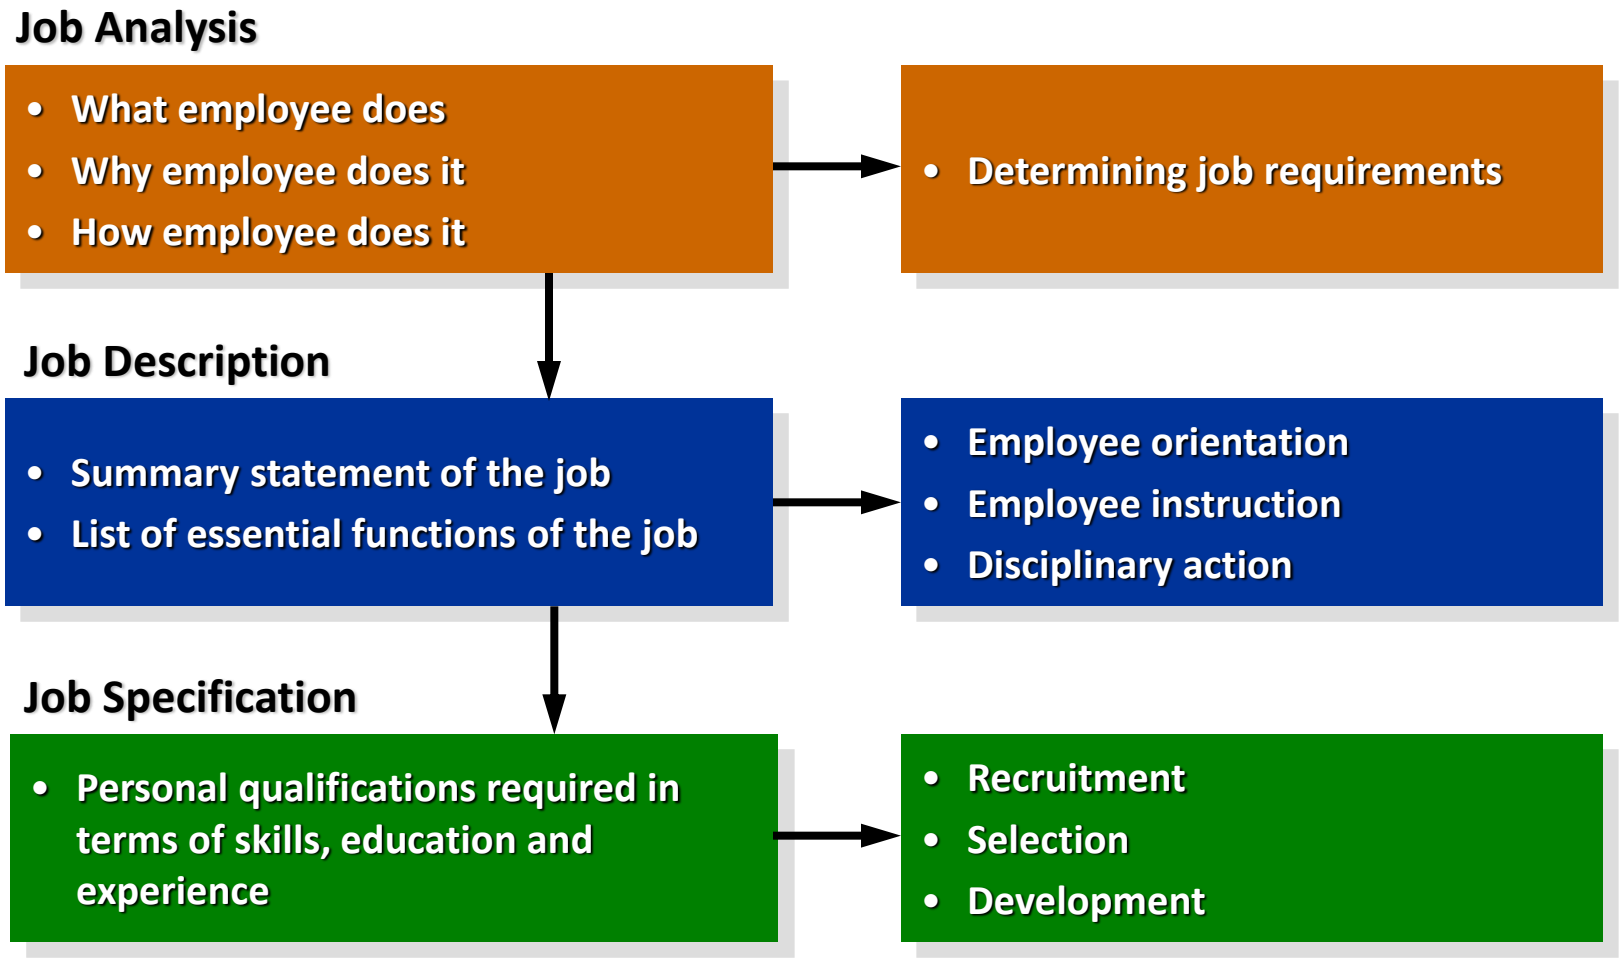

- This is used to reconcile the forecasts of labor demand and supply. This process identifies potential skill shortages or surpluses of employees, skills and jobs.

		Year 1	2	3
1.	Number required at the beginning of the year			
2.	Changes to requirements forecast during the year	DEMAND		
3.	Total requirements at the end of the year (1+2)	-------	------	
4.	Number available at the beginning of the year			
5.	Additions (transfers, promotions)	SUPPLY		
6.	Separations (retirement, wastage, promotions out and other losses)			
7.	Total available at the end of year (4+5+6)	----------		
8.	Deficit or surplus (3-7)	RECONCILIATION		
9.	Losses of those recruited during the year	OF THE ABOVE		
10.	Additional numbers needed during the year (8+9)	MANPOWER NEEDED		

Job Analysis

- Job analysis is the process of collecting job related information.
- Such information helps in the preparation of job description and job specification.
- It is, to be more specific, a systematic investigation of the tasks, duties and responsibilities necessary to do a job.

Nature of Job Requirements

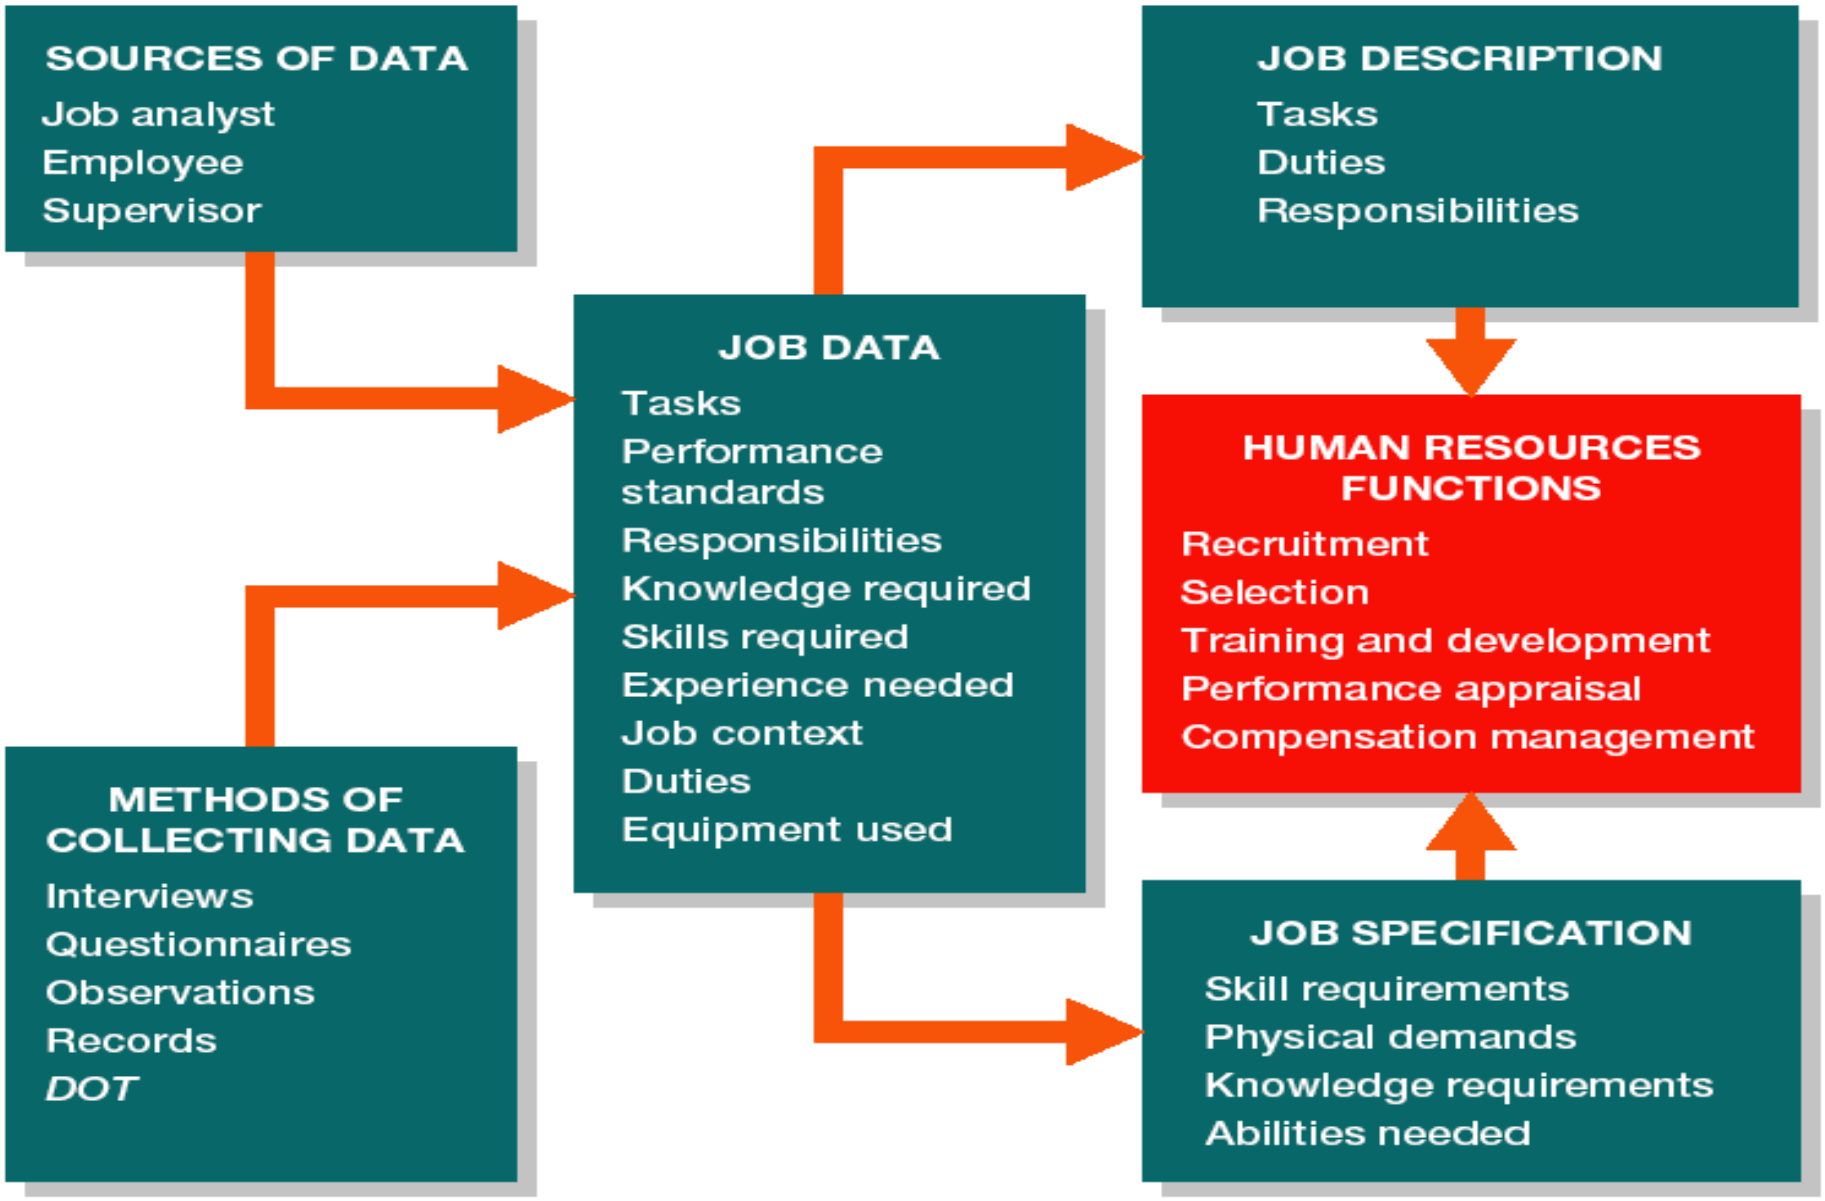

The Basic Steps Involved in Job Analysis

- Collecting and recording job information
- Checking the job information for accuracy
- Writing job descriptions based on the information
- Using the information to determine the skills, abilities and knowledge that are required on the job
- Updating the information from time to time

The Process of Job Analysis

- Strategic Choices
- Gather Information
- Process Information
- Job Description
- Job Specification

The Process of Job Analysis

Performing Job Analysis

Step 1: Select jobs to study

Step 2: Determine information to collect

- Tasks
- Responsibilities
- Skill requirements

Step 3: Identify sources of data

- Employees
- Supervisors/managers

Step 4: Methods of data collection

- Interviews
- Questionnaires
- Observation
- Diaries and Records

Step 5: Evaluate and verify data collection

- Other employees
- Supervisors/managers

Step 6: Write job analysis report

Approaches to Job Analysis

- **Functional Job Analysis (FJA)**
  - Quantitative approach to job analysis that utilizes a compiled inventory of the various functions or work activities that can make up any job.
  - Assumes that each job involves three broad worker functions:

    (1) data, (2) people, and (3) things.
- **Position Analysis Questionnaire (PAQ)**
  - A copyrighted questionnaire that is used to determine the degree to which different tasks are involved in performing a particular job.
- **Critical Incident Method**
  - Job analysis method by which job tasks are identified that are critical to job success.
- **HRIS and Job Analysis**
  - Human resource information systems (HRIS) help automate the process of job analysis.

Methods of Collecting Job Analysis Data

- **Job performance:** The analyst actually performs the job in question and collects the needed information.
- **Personal observation:** The analyst observes others doing the job and writes a summary.
- **Critical incidents:** Job incumbents describe several incidents relating to work, based on past experience; the analyst collects, analyses and classifies data.
- **Interview:** Job incumbents and supervisors are interviewed to get the most essential information about a job.
- **Panel of experts:** Experienced people such as job incumbents and supervisors with good knowledge of the job asked to provide the information.

Methods of Collecting Job Analysis Data

- **Diary method:** Job incumbents asked to maintain diaries or logs of their daily job activities and record the time spent and nature of work carried out.
- **Questionnaire method:** Job incumbents approached through a properly designed questionnaire and asked to provide details.
- **The Position Analysis Questionnaire:** It is a standardized form used to collect specific information about job tasks and worker traits.
- **Management Position Description Questionnaire:** It is a standardized form designed to analyze managerial jobs.
- **Functional Job Analysis:** It is a systematic process of finding what is done on a job by examining and analyzing the fundamental components of data, people and things.

Job Analysis Questionnaire

JOB ANALYSIS INFORMATION FORMAT

Your Job Title_____ Code_____Date_____

Class Title_____ Department_____

Your Name_____ Facility_____

Superior's Title_____ Prepared by_____

Superior's Name_____ Hours Worked_____AM_____to AM____
PM PM

1. What is the general purpose of your job?
2. What was your last job? If it was in another organization, please name it.
3. To what job would you normally expect to be promoted?

Job Analysis Questionnaire

4. If you regularly supervise others, list them by name and job title.

5. If you supervise others, please check those activities that are part of your supervisory duties:

¨ Hiring	¨ Coaching	¨ Promoting
¨ Orienting	¨ Counseling	¨ Compensating
¨ Training	¨ Budgeting	¨ Disciplining
¨ Scheduling	¨ Directing	¨ Terminating
¨ Developing	¨ Measuring Performances	¨ Other_____

6. How would you describe the successful completion and results of your work?

7. Job Duties – Please briefly describe WHAT you do and, if possible, How you do it. Indicate those duties you consider to be most important and/or most difficult:

Job Analysis Questionnaire

(a) Daily Duties

(b) Periodic Duties (Please indicate whether weekly, monthly, quarterly, etc.)

(c) Duties Performed at Irregular Intervals

8. Education – Please check the blank that indicates the educational requirements for the job, not your own educational background.

¨ No formal education required ¨ College degree

¨ Less than high school diploma ¨ Education beyond graduate

¨ High school diploma or equivalent degree and/or professional license.

¨ College certificate or equivalent

List advanced degrees or specified professional license or certificate required.

Please indicate the education you had when you were placed on this job.

Employee Activities in PAQ

1. **Information Input:** Where and how does the employee get the information he/she uses in performing his/her job.

   Examples:

   Use of written materials.

   Near-visual differentiation.

2. **Mental Processes:** What reasoning, decision making, planning and information-processing activities are involved in performing the job?

   Examples:

   Levels of reasoning in problem solving.

   Coding/decoding

3. **Physical activities:** What physical activities does the employee perform and what tools or devices does he/she use?

   Examples:

   Use of Keyboard devices.

   Assembling/disassembling.

Employee Activities in PAQ

4. **Relationships with other people:** What relationships with other people are required in performing the job?

   Examples:

   Instructing.

   Contacts with public, customers.

5. **Job context:** In what physical and social context is the work performed?

   Examples:

   High temperature.

   Interpersonal conflict situations.

6. **Other Job characteristics:** What activities, conditions, or characteristics other than those described above are relevant to the job?

   Examples:

   Specified work pace.

   Amount of job structure.

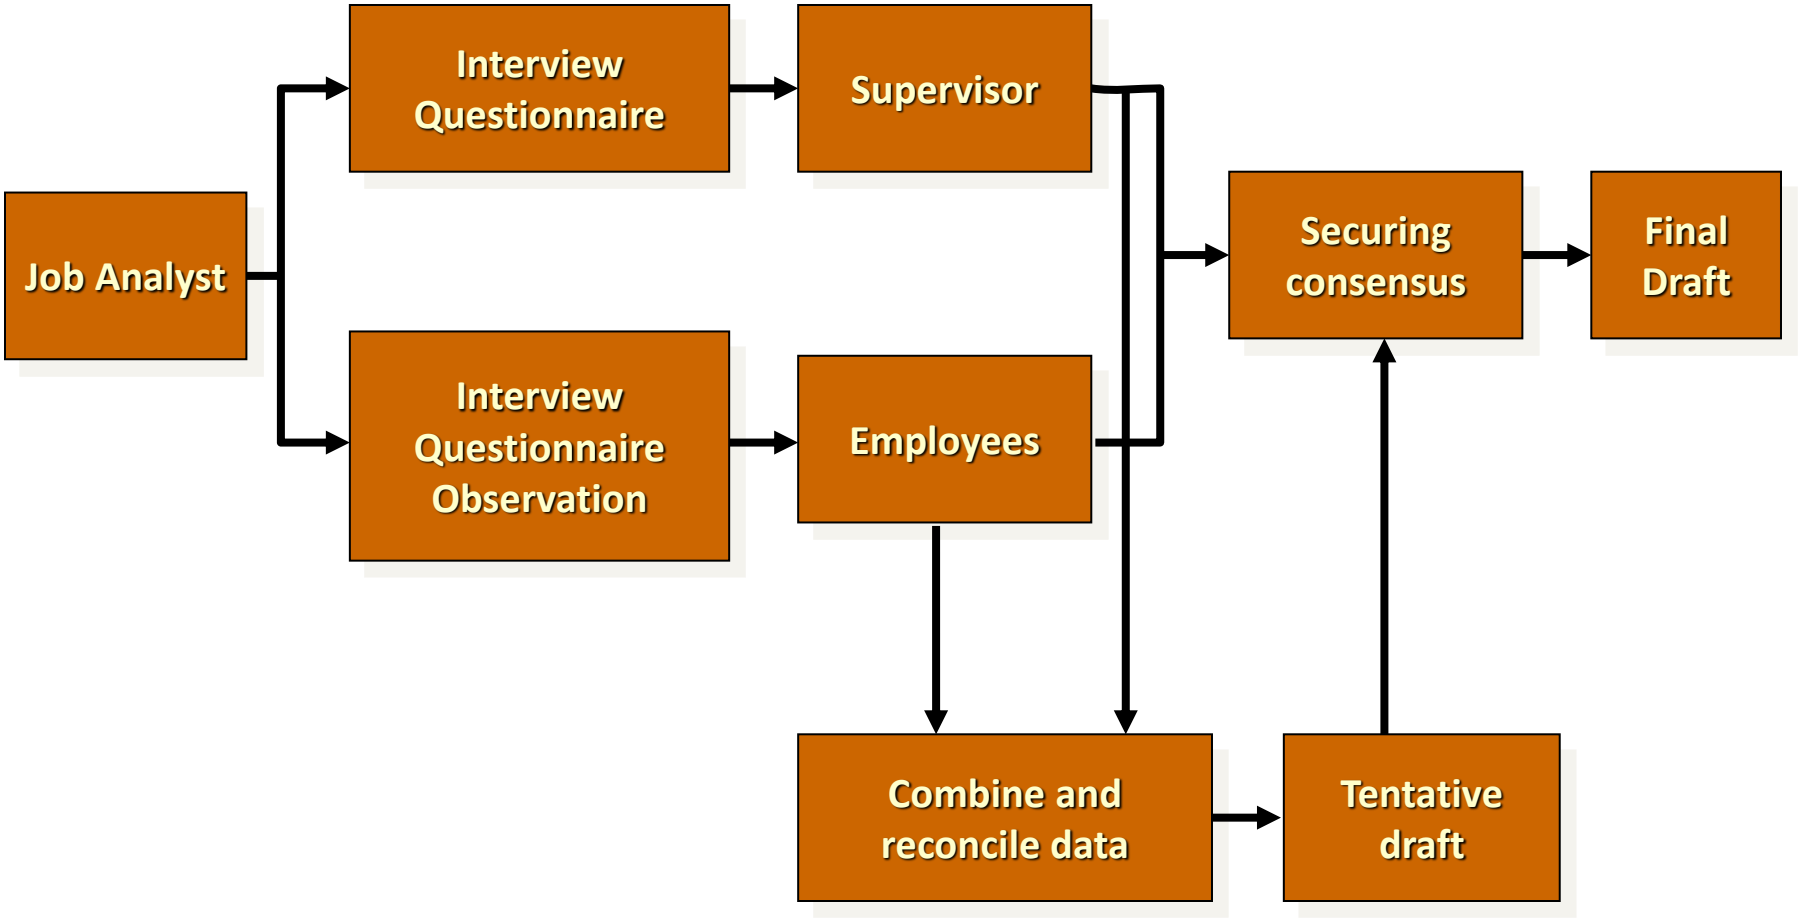

Important Benefits of Job Analysis

Multifaceted Nature of Job Analysis

Job Description

- **Job Description:** This is a written statement of what the job holder does, how it is done, under what conditions it is done and why it is done.

Key Elements of Job Description

- Job Title
  - Indicates job duties and organizational level
- Job Identification
  - Distinguishes job from all other jobs
- Essential Functions (Job Duties)
  - Indicate responsibilities entailed and results to be accomplished
- Job Specifications
  - Skills required to perform the job and physical demands of the job

Specimen of Job Description

- **Title** **Compensation manager**
- Code HR/2310
- Department Human Resource Department
- Summary Responsible for the design and administration of employee compensation programmes.
- Duties
  - ❖ Conduct job analysis.
  - ❖ Prepare job descriptions for current and projected positions.
  - ❖ Evaluate job descriptions and act as Chairman of Job Evaluation Committee.
  - ❖ Insure that company's compensation rates are in tune with the company's philosophy.

Specimen of Job Description

- ❖ Relate salary to the performance of each employee. Conduct periodic salary surveys.
- ❖ Develop and administer performance appraisal programme.
- ❖ Develop and oversee bonus and other employee benefit plans.
- ❖ Develop an integrated HRIS.
- Working conditions Normal. Eight hours per day. Five days a week.
- Report to Director, Human Resource Department.

Job Specification

- It offers a profile of human characteristics (knowledge, skills and abilities) needed by a person doing a job.
- Specimen of Job Description

Education	❖ MBA with specialization in HRM/MA in social work/PG Diploma in HRM/MA in industrial psychology. ❖ A degree or diploma in Labor Laws is desirable.
Experience	❖ At least 3 years' experience in a similar position in a large manufacturing company.
Skill, Knowledge, Abilities	❖ Knowledge of compensation practices in competing industries, of job analysis procedures, of compensation survey techniques, of performance appraisal systems. ❖ Skill in writing job descriptions, in conducting job analysis interviews, in making group presentations, in performing statistical computations. ❖ Ability to conduct meetings, to plan and prioritize work.
Work Orientation Factors	❖ The position may require up to 15 per cent travel.
Age	❖ Preferably below 30 years.
