DEPARTMENT OF
INDUSTRIAL ENGINEERING & MANAGEMENT

Date : 09th October 2026	**CIE – 1**	**Max. Marks : 50**
Semester : V	**UG**	**Duration : 90 Min**
Course Title: ENTREPRENEURSHIP & INTELLECTUAL PROPERTY RIGHTS		**Course Code : HS351TA**

Note:
1. Answer all the Questions.

Sl. No	Questions	M	BT	CO
	Part – A			
1.	A software company develops an AI-based tool for legal research and seeks to obtain a patent for the invention in India. Examine the patentability of the AI tool under the Indian Patents Act, 1970, with particular reference to the exclusions relating to computer programmes and software. Discuss the major challenges the company may face in obtaining patent protection.	10	4	5
2.	A company has obtained a patent for an innovative electric-vehicle battery management system. A competitor claims that similar technology was disclosed in an earlier patent. At the same time, an investor wants to know the commercial value of the patent. The company is also considering licensing the technology to an automobile manufacturer. Analyse the case and explain how patent searching, valuation, and commercialisation would help the company make an informed decision.	10	4	5
3.	A technology company develops an AI-based healthcare application that uses a mathematical algorithm to analyse patient data, presents the results through a graphical interface, and recommends a known medicine for treating a particular disease. The company seeks a patent for the entire system. Analyse the patentability of the invention under the Indian Patents Act, 1970, and identify the relevant categories of non-patentable inventions that may constitute grounds for refusal.	10	3	5
4.	"Successful entrepreneurs possess a combination of personal, managerial and behavioural qualities." Discuss the important characteristics and traits of successful entrepreneurs, with suitable examples.	10	2	1
5.	A technology-based start-up wants to use Artificial Intelligence, digital platforms, social entrepreneurship, sustainable business practices and innovative funding models to establish its business. Explain the emerging trends represented in this case and analyse their impact on entrepreneurship.	10	2	1

DEPARTMENT OF
INDUSTRIAL ENGINEERING AND MANAGEMENT

Date : 7th Nov 2025	**CIE - I**	**Max. Marks : 10 + 50**
Semester : V	**UG**	**Duration : 30 + 90 Min**
Course Title: Entrepreneurship &Intellectual property Rights		**Course Code : HS351TA**

Note:
1. Answer all the Questions.

Sl. No	Questions	M	BT	CO
	Part – A			
1.	Define Eco labelling	2	2	4
2.	List any two characteristics of a successful entrepreneur?	2	2	1
3.	Define Compulsory licensing.	2	2	4
4.	List any two different types of Entrepreneurs.	2	2	1
5.	Rahul, a software engineer, notices that many small businesses struggle with online payments. He develops a mobile app to simplify digital transactions and starts his own company to offer this solution. Based on the above scenario, identify the type of entrepreneur Rahul represents and explain why.	2	3	1
	Part – B			
1	Define a patent and explain its salient features that make it a valuable legal protection for inventors. Analyze the key factors determining the patentability of an invention.	10	3	4
2	Explain the concepts of Registrable and Non-Registrable Trademarks under the Trade Marks Act, 1999. Discuss the procedure for registration of a Trademark under the ACT.	10	3	4
3.	A biotechnology company, Bio Nova Pvt. Ltd., holds a patent for a unique process of producing eco-friendly bio-plastic. A rival firm, Green Poly Industries, begins manufacturing and selling a similar bio-plastic using a slightly modified process without obtaining permission from Bio Nova. Around the same time, Bio Nova plans to expand its patent portfolio and conduct a patent search for new innovations while also seeking investors to commercialize and value its intellectual property assets. Based on the above scenario, analyze the following issues: 1. What constitutes patent infringement in this case, and what legal remedies are available to Bio Nova under the Patents Act, 1970? 2. How should Bio Nova conduct an effective patent search and prepare a patent draft to protect its future innovations? 3. Discuss the process and importance of commercialization and valuation of Bio Nova's intellectual property in attracting investors.	10	4	5

4	Ms. **Ananya Rao**, a young engineer working in a technology firm, is passionate about developing sustainable energy solutions. While her company supports innovation internally, she is uncertain whether to continue as an intrapreneur within the organization or to start her own entrepreneurial venture focused on solar-powered charging systems for rural areas. She discusses her ideas with a team of colleagues who share her vision, and together they plan to explore market opportunities and assess risks. However, her family believes entrepreneurship is too risky and that only people with large capital or business backgrounds can succeed. Based on the above scenario, analyze the following issues: 1. Differentiate between an entrepreneur and an intrapreneur in the context of Ananya's situation. 2. Discuss the emerging trends in entrepreneurship that could influence Ananya's decision to start a new venture. 3. Evaluate the characteristics of a successful entrepreneur that Ananya and her team should develop to ensure business success. 4. Identify and explain the myths about entrepreneurship reflected in the case and how they can be overcome. 5. Explain the role of entrepreneurial teams in fostering innovation and sustaining growth in startups like Ananya's.	10	4	1
5	Explain the importance of entrepreneurship in promoting engineering innovation and fostering economic growth. Discuss how entrepreneurial initiatives among engineers contribute to technological advancement, job creation, and sustainable development, with suitable examples.	10	3	1

ENTREPRENEURSHIP AND INTELLECTUAL PROPERTY RIGHTS			

Note:
1. Answer all the Questions.

PART – A

Sl. No	Questions	M	BT	CO
1	Define Compulsory license under the patent law.	02	1	4
2	List any two characteristics of successful entrepreneurs.	02	2	1
3	Difference between Intrapreneur & Entrepreneur.	02	1	1
4	List any two non-patentable inventions under the Indian patent Act.	02	2	2
5	List any two myths of entrepreneurs.	02	2	1

PART – B

Sl. No	Questions	M	BT	CO
1.a	A software company develops an AI tool for legal research and applies for a patent in India. Discuss the challenges it might face under Indian patent law.	05	3	3
b	Explain the difference between a product patent and a process patent with an examples.	05	1	4
2	Create a commercialization strategy for a patent related to renewable energy technology.	10	3	3
3	Propose a framework for enhancing Traditional Knowledge protection under international Intellectual Property laws.	10	2	4
4	Create a case study on how perseverance as a characteristic helped a famous entrepreneur achieve success.	10	3	1
5	Explain how entrepreneurship fosters innovation in an economy with one case example	10	2	1

DEPARTMENT OF
INDUSTRIAL ENGINEERING & MANAGEMENT

Date : 09th Oct 2026	**CIE – I A**	**Max. Marks : 50**
Semester : V	**UG**	**Duration : 90 Min**
Course Title: Operations Management		**Course Code : IM352IA**

Note:
1. Answer all the Questions.

Sl. No	Questions	M	BT	CO
1.	With suitable example, Distinguish between Manufacturing and service processes.	10	2	4
2.	Identify nine competitive priorities used in operations strategy, and explain how a consistent pattern of decisions can develop organizational capabilities.	10	2	2
3.	The owner of a small manufacturing business has patented a new device for washing dishes and cleaning dirty kitchen sinks. Before commercializing the device and adding it to the existing product line, the owner wants to assess its financial feasibility. The estimated variable cost is Rs.7 per unit, while the annual fixed cost is Rs.56,000. i. If the selling price is set at Rs.25 per unit, determine the number of units that must be produced and sold to break even. Use both algebraic and graphic approaches. ii. The forecasted first-year sales are 10,000 units if the selling price is reduced to Rs.15 per unit. Under this pricing strategy, calculate the total contribution to profit during the first year.	10	3	3
4.	A retailer must decide whether to build a small or large facility at a new location. Demand at the location can be either low or high, with probabilities estimated to be 0.4 and 0.6, respectively. If a small facility is built and demand proves to be high, the manager may choose not to expand (payoff = $223,000) or to expand (payoff = $270,000). If a small facility is built and demand is low, there is no reason to expand and the payoff is $200,000. If a large facility is built and demand proves to be low, the choice is to do nothing ($40,000) or to stimulate demand through local advertising. The response to advertising may be either modest or sizable, with their probabilities estimated to be 0.3 and 0.7, respectively. If it is modest, the payoff is estimated to be only $20,000; the payoff grows to $220,000 if the response is sizable. Finally, if a large facility is built and demand turns out to be high, the payoff is $800,000. Draw a decision tree. Then analyze it to determine the expected payoff for each decision and event node. Which alternative—building a small facility or building a large facility—has the higher expected payoff?	10	3	3
5.	A manufacturing company wants to introduce a new product with high variety and low production volume. Explain how it should select an appropriate manufacturing process structure and process strategy.	10	3	4

OPERATIONS MANAGEMENT			

Note:
1. Answer all the Questions.

Sl. No	Questions	M	BT	CO
	Part – A			
1	Operations ensure the efficient use of _____ to meet customer demands.	01	1	1
2	A supply chain includes the flow of materials, information, and _____ across organizations.	01	1	1
3	Effective supply chain management ensures timely delivery and reduces _____.	01	1	1
4	Competitive priorities like cost, quality, and _____ determine how a company competes in the market.	01	1	1
5	The Fourth Industrial Revolution integrates technologies like IoT, _____, and robotics into operations.	01	1	1
6	Processes can be categorized as _____ or supporting based on their direct impact on the final product.	01	1	1
7	Differentiate between order winner and order qualifier.	02	2	2
8	A hospital is considering a new procedure to be offered at Rs.200 per patient. The fixed cost per year would be Rs.100,000, with total variable costs of Rs.100 per patient. What is the break-even quantity for this service?	02	2	2
	Part –B			
1	Define operations management. Briefly explain the key terms involved in the definition of operations management with a schematic model of a production system.	10	2	1
2	With suitable example, Distinguish between Manufacturing and service processes.	10	3	1

Academic year 2024-2025 (ODD Sem)

3	White Valley Ski Resort is planning the ski lift operation for its new ski resort. Management is trying to determine whether one or two lifts will be necessary; each lift can accommodate 250 people per day. Skiing normally occurs in the 14-week period from December to April, during which the lift will operate 7 days per week. The first lift will operate at 90 percent capacity if economic conditions are bad, the probability of which is believed to be about a 0.3. During normal times the first lift will be utilized at 100 percent capacity, and the excess crowd will provide 50 percent utilization of the second lift. The probability of normal times is 0.5. Finally, if times are really good, the probability of which is 0.2, the utilization of the second lift will increase to 90 percent. The equivalent annual cost of installing a new lift, recognizing the time value of money and the lift's economic life, is $50,000. The annual cost of installing two lifts is only $90,000 if both are purchased at the same time. If used at all, each lift costs $200,000 to operate, no matter how low or high its utilization rate. Lift tickets cost $20 per customer per day. Should the resort purchase one lift or two?	20	4	3
4	A manager is deciding whether to build a small or a large facility. Much depends on the future demand that the facility must serve, and demand may be small or large. The manager knows with certainty the payoffs that will result under each alternative, shown in the following payoff table. What is the best alternative for each decision rule: Maximin. Maximax. Laplace. Minimax Regret.	10	4	3

	Possible future demand	
Alternative	Low	High
Small facility	200	270
Large facility	160	800
Do nothing	0	0

Note:
1. Answer all the Questions.

Sl. No	Questions	M	BT	CO
	Part – A			
1.	State the primary objective of financial accounting	1	1	1
2.	The process of recording a transaction is called _____.	1	2	2
3.	Showcase your understanding of accounting equation with an example	2	2	2
4.	Identify the books which are termed as “First book of accounting and Principal book of accounting”?	2	2	1
5.	State any two advantages of adopting IFRS for Indian engineering firms with global operations.	2	2	3
6.	In the era of many startups trying to be unicorns, comment on the “Conservatism/Prudence concept” and its importance which has helped traditional businesses prevail in the long run.	2	2	2
	Part – B			
1.	Review the Golden Rules of Accounting. Illustrate each category with necessary examples.	10	2	1
2.	Assume you are starting an E-Commerce website to sell a product of your choice. Identify and list any 10 financial transactions that you might encounter in the first month of starting the business and pass them on to the journal books.	10	4	2
3.	The following is a list of various accounts. State the nature of each account (personal, real or nominal) and also which account will be debited and which account will be credited. (**Use a tabular column to furnish your answer.**) Wages outstanding, Capital introduced, Cartage paid, Prepaid salary, Rent outstanding, Bank overdraft, Discount allowed, Goods returned by buyer, Drawings by proprietor, Commission received.	10	3	3

<table>
<tr><td>4.</td><td>Give the Journal entries for the following transactions:
<table>
<tr><td>Date</td><td>Particulars</td><td>₹</td></tr>
<tr><td>April 1</td><td>Business started with cash</td><td>10,000</td></tr>
<tr><td>April 3</td><td>Deposited in SBI</td><td>6,000</td></tr>
<tr><td>April 5</td><td>Bought goods from Mahavir</td><td>1,500</td></tr>
<tr><td>April 9</td><td>Sold goods to Gupta</td><td>650</td></tr>
<tr><td>April 12</td><td>Paid cash to Mahavir</td><td>990</td></tr>
<tr><td>April 15</td><td>Cash received from Gupta</td><td>625</td></tr>
<tr><td>April 20</td><td>Furniture purchased</td><td>300</td></tr>
<tr><td>April 22</td><td>Drew cash from bank for personal use</td><td>600</td></tr>
<tr><td>April 30</td><td>Paid rent by cheque</td><td>200</td></tr>
<tr><td>April 30</td><td>Salary due to clerk</td><td>300</td></tr>
</table>
Also prepare the necessary ledger accounts for cash and capital accounts only.</td><td>10</td><td>3</td><td>3</td></tr>
<tr><td>5.</td><td>Financial literacy is very important for everyone given the road map India has chosen to grow. There are several challenges on the ground also with regard to providing “Financial Literacy”.
Conceptualize a framework which utilizes students with both engineering & finance knowledge along with problem solving skills like you to provide “Financial knowledge” to students between the age group of 15 to 19. You are allowed to use the same flow which you used for your “Design Thinking Project”. Comment on Novelty that you want to bring from your POV.</td><td>10</td><td>4</td><td>3</td></tr>

FINANCIAL ACCOUNTING AND COSTING			

Note:
1. Answer all the Questions.

PART – A

Sl. No	Questions	M	BT	CO
1	Write a note on double-entry bookkeeping.	02	2	1
2	List the main financial statements prepared in financial accounting	02	1	1
3	Mention the accounting equation	02	1	1
4	What is the purpose of a trial balance?	02	2	1
5	Depict the journal format in accounting.	02	1	1

PART – B

Sl. No	Questions	M	BT	CO
1.	Explain the steps involved in the accounting cycle and discuss their significance in ensuring accurate financial reporting	10	3	1
2.	Discuss how zero-based budgeting differs from traditional budgeting approaches. What are the benefits and limitations of adopting a zero-based budgeting system?	10	2	1
3 a.	Distinguish between Single Entry vs. Double Entry accounting process.	05	2	1
b.	Write a note on International Financial Reporting Standards.	05	2	1
4 a.	Journalise the business transactions during the month of Jan 2024. Jan 1: Owner invested ₹50,000 cash in the business. Jan 3: Purchased office furniture for ₹10,000, paid in cash. Jan 5: Bought goods worth ₹20,000 on credit from M/s XYZ Traders. Jan 10: Paid ₹5,000 to M/s XYZ Traders as partial payment. Jan 15: Sold goods for ₹15,000 on cash. Jan 20: Paid office rent of ₹3,000 in cash.	05	3	2
b.	Discuss the principles of debit and credit in journalizing transactions. How do these principles apply to different types of accounts?	05	3	1

5.	Journalise the business transactions during the month of Feb XXXX Feb 2: Started business with cash ₹1,00,000 and machinery ₹50,000. Feb 5: Opened a bank account by depositing ₹30,000. Feb 10: Purchased goods for ₹40,000 on credit from M/s ABC Traders. Feb 12: Paid ₹5,000 for office rent in cash. Feb 17: Sold goods for ₹25,000 on credit to M/s XYZ Ltd. Feb 20: Paid ₹10,000 to M/s ABC Traders. Feb 22: Purchased office supplies for ₹2,000 in cash. Feb 24: Received ₹20,000 from M/s XYZ Ltd. Feb 27: Paid wages ₹4,000 in cash. Feb 28: Withdrew ₹3,000 for personal use.	10	3	2

Date : 7th Nov 2025	**CIE-1**	**Max. Marks : 10 + 50**
Semester : V	**UG**	**Duration : 30 + 90 Min**
Course Title: Quality Assurance		**Course Code : IM353IA**

Note:
1. Answer all the Questions.

Sl. No	Questions	M	BT	CO
	Part – A			
1.	List the statistical methods for quality control and improvement.	2	1	01
2.	What is the primary objective of ISO 14000 standards?	2	2	01
3.	Write the steps followed in constructing the individual chart	2	2	02
4.	Differentiate between defect and defective.	2	2	02
5.	What is the primary goal of quality assurance?	2	2	02
	Part – B			
1	"Analyze how Rational Subgrouping can be used as a quality control strategy in manufacturing or service industries to separate common and special causes of variation, thereby improving process stability."	10	4	3
2	"Evaluate the organizational, operational, and strategic benefits of implementing the ISO 9000 quality standard, and explain how it contributes to continuous improvement and competitive advantage."	10	3	3
3	"Analyze how the Eight Dimensions of Quality can be used to evaluate the performance of a consumer product. Examine each dimension's effect on customer satisfaction and illustrate your analysis with a detailed case study from the consumer goods or electronics industry."	10	4	3
4	A manufacturing company measures the diameter (in mm) of a component during production. Data are collected in	10	4	4

Sample	Measurement 1	Measurement 2	Measurement 3	Measurement 4
1	24.8	25.1	24.9	25.0
2	25.3	25.2	25.4	25.1
3	24.7	24.9	24.8	24.6
4	25.5	25.4	25.6	25.3
5	24.9	25.0	25.1	24.8
6	25.2	25.3	25.1	25.0

A) sample calculate the sample mean
B) determine the $\bar{X}$-chart control limits and the R-chart control limits:
C) Interpret the control charts: are the process means and ranges in control? Identify any points or patterns that indicate special-cause variation.

5	A process is producing shafts with a nominal diameter of 50 mm. The specification limits are 50 ± 0.5 mm. From control chart data, the process mean (X) is 50.1 mm, and the process standard deviation (σ) is 0.1 mm. (a) Calculate the Upper Control Limit (UCL) and Lower Control Limit (LCL) for the process using $\pm 3\sigma$ limits. (b) Compare the control limits with the specification limits and comment on the process capability.	10	4	4

QUALITY ASSURANCE			

Note:
1. Answer all the Questions.

PART – A

Sl. No	Questions	M	BT	CO
1	Differentiate between defect and defective.	2	2	1
2	What is the primary goal of quality assurance?	1	2	1
3	How does ISO certification benefit organizations?	1	1	2
4	Mention four key core technologies that drive Quality 4.0.	2	2	3
5	List the 7 QC tools	2	1	3
6	What is ATS and ARL?	2	1	2

PART – B

Sl. No	Questions	M	BT	CO
1.	A certain type of storage of battery lasts on an Average 3 years and Standard of 0.5, assume normal distribution, find percentage of battery that lasts a) Less than 2 years, b) Less than 4 years, c)between 2.5 to 4.5 years, d)less than 4 years.	10	3	3
2.	Describe the principles of Rational Subgrouping and apply them to a specific industry, such as manufacturing or service, to show how subgrouping can be used to reduce variation and improve process quality.	10	2	1
3.	Classify the Cost of Good Quality and Cost of Bad Quality in the automotive industry. Provide examples of each cost category and explain how they can be managed effectively to improve product performance and reduce overall expenses.	10	1	2
4.	Choose a specific product (e.g., a smartphone, automobile, or any consumer electronics) and analyze how the Eight Dimensions of Quality influence its acceptance by customers. Break down each dimension—such as performance, features, reliability, and serviceability—and evaluate their relative importance in shaping customer perceptions. How do these dimensions interact with each other to create a competitive advantage for the product in the market? Use relevant examples to support your analysis.	10	4	4
5.	What are the key benefits of implementing the ISO 14000 standard for an organization?	10	2	2

DEPARTMENT OF
INDUSTRIAL ENGINEERING & MANAGEMENT

Date : 10/11/2025	**CIE – I**	**Max. Marks : 10 + 50**
Semester : V	**UG**	**Duration : 30 + 90 Min**
Course Title: Enterprise Information Systems		**Course Code : IM355TBB**

Note:
1. Answer all the questions

Sl. No	Questions	M	BT	CO
	Part – A			
1.	The evolution of planning systems progressed from MRP-I to _____ and then to ERP.	1	1	CO1
2.	The primary mechanism by which Enterprise Information Technology provides value to organizations is through appropriate _____ improvement.	1	1	CO1
3.	Enterprise Systems are noted for providing a tightly integrated solution to an organization's information needs. State two functions that were historically stand-alone applications.	2	2	CO2
4.	What is the Role of EIS in business decision-making? State one key function.	2	1	CO1
5.	A textile company is implementing a new EIS. Their goal is to maximize the utilization of their collective employee knowledge for project teaming and innovation. Which core EIS component is primarily responsible for managing and exploiting this intellectual capital? Justify your choice.	2	3	CO3
6.	What is the Role of EIS in business decision-making? State one key function.	2	1	CO1
	Part – B			
1	Distinguish between MRP-I and MRP-II. Explain the primary functions of each planning system and illustrate how the evolution from Material Requirements Planning (MRP-I) to Manufacturing Resource Planning (MRP-II) broadened the scope of enterprise planning.	10	2	CO2
2	Define and Differentiate the Core Components of EIS. Briefly define ERP, CRM, and SCM, and explain the unique focus of each component within the overall enterprise system framework.	10	2	CO2
3	Explain the scope of Digital Transformation in the Context of EIS. Describe what the term means for a modern enterprise and how the adoption of an integrated EIS serves as the foundational enabler for achieving digital transformation goals.	10	2	CO1
4	You are advising a high-growth tech startup. The founders are considering which EIS component to prioritize first: CRM for managing investor relations and early customer feedback, or a modular ERP for integrating the finance and HR functions. Argue for the strategic component that should be prioritized to support the startup's growth and eventual Digital Transformation.	10	3	CO3

5	What is a Business Process? Provide a comprehensive definition, and explain why identifying and defining these processes is the crucial first step before any automation or reengineering effort.	10	2	CO2

Sem	**V**	**CIE – I**	
ENTERPRISE INFORMATION SYSTEMS (Elective)			

Note:
1. Answer all the Questions.

PART – A

Sl. No	Questions	M	BT	CO
1	List two key features of a Customer Relationship Management (CRM) system.	02	L2	CO1
2	Mention two types of data commonly handled by EIS.	02	L2	CO1
3	Name two popular ERP software solutions.	02	L1	CO2
4	What is the primary function of Supply Chain Management (SCM) within EIS?	02	L1	CO1
5	What are the core modules of an ERP system?	02	L2	CO2

PART – B

Sl. No	Questions	M	BT	CO
1.	Analyse the benefits and challenges of implementing an EIS in a manufacturing organization. Support your answer with examples.	10	L2	CO1
2.	How can information technology support a company's business processes and decision making and give it competitive advantage? Give examples to illustrate your answer.	10	L3	CO3
3.	Highlight some of the issues you have faced in using SAP implemented in your institution. How you resolved those issues.	10	L3	CO2
4.	Evaluate the role of EIS in Customer Relationship Management (CRM) with specific examples of how companies have leveraged EIS for CRM.	10	L2	CO3
5.	XYZ Manufacturing Company has been facing inefficiencies in its operations due to a lack of integration between its departments. The procurement, inventory, production, and sales teams operate on standalone systems, leading to delays, data inaccuracies, and increased costs. To address these issues, the company has decided to implement an Enterprise Resource Planning (ERP) system. However, after six months of implementation, the company is still struggling with system adoption and is not seeing the expected improvements. Analyze the challenges XYZ Manufacturing is facing in implementing the ERP system. Suggest strategies to overcome these challenges and ensure successful adoption of the ERP system.	10	L4	CO4

Semester : V	**UG**	**Duration : 30 + 90 Min**
Course Title: ADVANCED DECISION MODELLING		**Course Code : IM355TBD**

Note:
1. Answer all the Questions.

Sl. No	Questions	M	BT	CO
	Part – A			
1.	What is balking, reneging and jockeying?	02	L2	CO1
2.	The Probability that exactly zero units in the queuing system is _____	02	L2	CO1
3.	Write the Kendall's notation for the single server queuing system	02	L2	CO1
4.	Classify the states of Markov Chain.	02	L2	CO2
5.	In an M/M/1 queue, the arrival is Poisson with 4 per minute and the average time spent in system is 5.5 minutes for each customer. The service rate is _____ per minute	02	L3	CO1
	Part – B			
1	Customers arrive at a one-window drive according to a Poisson distribution with mean of 10 minutes and service time per customer is exponential with mean of 6 minutes. The space in front of the window can accommodate only three vehicles including the serviced one. Other vehicles have to wait outside this space. Calculate: i. Probability that an arriving customer can drive directly to the space in front of the window. ii. Probability that an arriving customer will have to wait outside the directed space. iii. How long an arriving customer is expected to wait before getting the service?	10	L3	CO1
2	At a stamp vending window of a post office 20 customer arrive on an average every 10 min. the vendor serves 5 customers in 2 min. determine: 1. Average number of customers in the system 2. Average waiting time of a customer. 3. Probability of a customer waiting for more than 3 min before being served. 4. Idle time of the vendor in a shift of 8 hours	14	L3	CO1
3	Discuss the classification of queuing models and explain how Kendall's notation helps in representing them.	06	L3	CO1

4	In a bank there is only one window. A solitary employer performs all the services required and the window remain continuously open from 7am to 1 pm. It was discovered that an average number of clients is 54 during the day and the average service time is 5min / person. Find: i. Average number of clients in the system ii. Average waiting time iii. The probability that a client has to spend more than 10 mins in the system	10	L3	CO1
5	A system has three possible states, 0, 1 and 2. Every hour it makes a transition to a different state, which is determined by a coin flip. For example, from state 0, it makes a transition to state 1 or state 2 with probabilities 0.5 and 0.5. a) Find the transition probability matrix. b) Find the three-step transition probability matrix. c) Find the steady-state distribution of the Markov chain.	10	L3	CO2

ADVANCED DECISION MODELLING (Professional Core Elective)			

Note:

1. Answer all the Questions.

Sl. No	Questions	M	BT	CO
	Part A			
1.	What is the primary objective of sequencing problems?	02	1	1
2.	How does the concept of 'setup time' impact sequencing problems?	02	3	3
3.	What is the significance of 'priority rules' in sequencing problems?	02	2	2
4.	What is the difference between 'flow shop' and 'job shop' sequencing?	02	2	2
5.	How does the concept of 'setup time' impact sequencing problems?	02	3	3
	Part B			
1	Explain the following terminologies: i. Idle time on machine ii. Total elapsed time iii. No passing rule iv. Number of machines v. Processing order	10	1	1
2	Find the sequence that minimizes the total elapsed time (in hours) required to complete the following tasks on two machines. *Task* | *A* | *B* | *C* | *D* | *E* | *F* | *G* | *H* | *I* *Machine I* | 2 | 5 | 4 | 9 | 6 | 8 | 7 | 5 | 4 *Machine II* | 6 | 8 | 7 | 4 | 3 | 9 | 3 | 8 | 11	10	2	2
3	Determine the optimal sequence of jobs that minimize the total elapsed time, based on the following information. Processing time on machines is given in hours and passing is not allowed. *Job No* | *A* | *B* | *C* | *D* | *E* | *F* | *G* *Machine* M_1 | 3 | 8 | 7 | 4 | 9 | 8 | 7 *Machine* M_2 | 4 | 3 | 2 | 5 | 1 | 4 | 3 *Machine* M_3 | 6 | 7 | 5 | 11 | 5 | 6 | 12	10	3	3

Academic year 2024-2025 (ODD Sem)

<table>
<tr><td>4</td><td>There are four jobs each of which has to be processed on machines A, B, C, D, E and F in the order ABCDEF. Processing time in hours is given in the table below. Find the optimal sequencing of jobs, minimum time required to process these jobs and the idle time for each of the machines.
<table>
<tr><td>Job</td><td>A</td><td>B</td><td>C</td><td>D</td><td>E</td><td>F</td></tr>
<tr><td>1</td><td>15</td><td>8</td><td>6</td><td>14</td><td>6</td><td>36</td></tr>
<tr><td>2</td><td>17</td><td>7</td><td>9</td><td>10</td><td>15</td><td>22</td></tr>
<tr><td>3</td><td>21</td><td>7</td><td>12</td><td>9</td><td>11</td><td>19</td></tr>
<tr><td>4</td><td>18</td><td>6</td><td>11</td><td>12</td><td>14</td><td>17</td></tr>
</table></td><td>10</td><td>2</td><td>2</td></tr>
<tr><td>5</td><td>Two major parts P_1 and P_2 for a product require processing through machine centres. The technological sequence of the parts on six machines and manufacturing times on each machine are
<table>
<tr><td rowspan="2">Part P_1</td><td>Machine sequence:</td><td>C</td><td>A</td><td>E</td><td>F</td><td>D</td><td>B</td></tr>
<tr><td>Time (hrs):</td><td>2</td><td>3</td><td>4</td><td>5</td><td>6</td><td>1</td></tr>
<tr><td rowspan="2">Part P_2</td><td>Machine sequence:</td><td>B</td><td>A</td><td>E</td><td>F</td><td>C</td><td>D</td></tr>
<tr><td>Time (hrs):</td><td>3</td><td>2</td><td>5</td><td>3</td><td>2</td><td>3</td></tr>
</table>
What would be the optimal scheduling to minimize the total processing time for these two parts? Find also the total elapsed time. For each machine specify the part that should be processed first.</td><td>10</td><td>3</td><td>3</td></tr>
</table>
